[1] District data funded by the Montana Wheat & Barley Committee. [2] Preliminary.

MONTANA PRICES RECEIVED FOR JULY

Montana crop prices for the full month of July were down from the previous month, with the exception of spring wheat and alfalfa. Winter wheat decreased 28 cents to $5.25, while durum wheat slipped 38 cents to $5.33 per bushel. Spring wheat increased 9 cents to $5.34 per bushel. Feed barley remained unchanged at $3.27 per bushel, while malt barley decreased 10 cents to $3.27 per bushel. Alfalfa hay climbed $2.00 to $66.00 per ton, while other hay remained unchanged at $55.00 per ton. The all wheat price for mid-August averaged $4.99 per bushel, while the all barley price was $3.08.

Livestock prices for the full month of July were higher across the board compared with the previous month, with the exception of calves. Cow prices averaged 40 cents above last month at $33.30 per cwt, while the average price for steers and heifers rose $4.60 to $58.90 per cwt. Calf prices fell $1.00 to $54.90 per cwt. Prices received for sheep were up $1.60 to $33.50 per cwt, while lamb prices improved 80 cents to $99.60 per cwt. Milk prices climbed $1.50 to $15.40 per cwt. Steer and heifer prices for mid-August averaged $59.50 per cwt.

Nationally, steer and heifer prices averaged $62.10 per cwt for the full month of July. Cow prices came in at $31.00 and hogs were $58.70 per cwt. The U.S. all wheat price was $4.73 per bushel and $3.18 per bushel for all barley. Egg prices were 70.9 cents per dozen.

The All Farm Products Index of Prices Received in August was 116 based on 1990-92=100, down 2 points (1.7 percent) from July even though price gains from July for cattle, milk, corn, and hay slightly more than offset price declines for wheat, peaches, tomatoes, and grapes. The seasonal changes in the mix of commodities farmers sell also affect the overall index level. In August, lower seasonal marketings of wheat, hay, corn, and hogs compared with other commodities resulted in this decline in the All Farm Products Index.

Compared with August 1995, the All Farm Products Index was 14 points (14 percent) higher. Price increases from August 1995 for corn, milk, hogs, and soybeans more than offset price decreases for calves, tobacco, lettuce, and potatoes.

WHEAT & BARLEY MOVEMENT 15% HIGHER THAN LAST YEAR

Montana wheat shipped to out-of-state destinations in December 1995-May 1996, at 86 million bushels, was 15 percent higher than the same period last year.

Shipments to eastern destinations totaled 7.2 million bushels, compared with 3.3 million bushels last year.

Movement to the west was up 3 percent, at 72.4 million bushels. Other and unknown destinations, mostly states south and southeast of Montana, received 6.4 million bushels up drastically from last year at .9 million bushels.

Rail movement amounted to 81.9 million bushels, 95 percent of total shipments.

Montana barley shipped to out-of-state destinations, December 1995-May 1996, was 15.8 million bushels, down 9 percent from same period last year.

Shipments to western destinations were down 11 percent and eastern destinations were up 11 percent. Barley hauled by rail was 93 percent of total movement up 3 percent from the same period last year.

MONTANA RED MEAT PRODUCTION UP, U.S. RED MEAT PRODUCTION SETS RECORD HIGH FOR JULY

Montana slaughter plants produced 1.5 million pounds, dressed weight, of red meat during July 1996, up 8 percent from last year and up 15 percent from last month.

There were 1,700 head of cattle slaughtered by Montana slaughter plants in July, 300 head more than the previous year. The average live weight dropped 18 pounds from a year ago to 1,243 pounds.

Hog slaughter amounted to 2,100 head, down 500 head from the previous year. The average live weight was also down, dropping from 236 pounds in 1995 to 228 pounds in 1996. The number of sheep slaughtered, at 300 head, was the same as a year ago. The average live weight dropped 4 pounds from last year to 114 pounds.

Commercial red meat production for the United States totaled 3.58 billion pounds during July, 4 percent above the previous record high in July 1992.

Beef production, at 2.19 billion pounds, was up 2 percent from the previous record high in July 1986. Head kill totaled 3.15 million head, up 7 percent from a year earlier. The average live weight was down 20 pounds from the previous year at 1,164 pounds.

Veal production totaled 32.0 million pounds, up 34 percent from a year earlier. Calf slaughter totaled 160,400 head, 41 percent above a year ago. The average live weight was down 20 pounds to 351 pounds.

Pork production, at 1.34 billion pounds, was up 3 percent from the previous year. Hog kill totaled 7.34 million head, up 4 percent above a year earlier. The average live weight decreased 4 pounds to 251 pounds. Lamb and mutton production, at 20.0 million pounds, rose 5 percent from the previous year. Slaughter totaled 326,400 head, up 5 percent from a year ago. The average live weight remained unchanged at 125 pounds.

January-July red meat production was 25.3 billion pounds, up 2 percent from the comparable period a year earlier. Accumulated beef production rose 6 percent, veal jumped 19 percent, pork decreased 3 percent and lamb and mutton dropped 7 percent.

U.S. CATTLE ON FEED

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 7.55 million head on August 1, 1996.

Placements in feedlots during July totaled 1.75 million. Net placements were 1.68 million. During July, placements of cattle and calves weighing less than 600 pounds were 343,000, 600-699 pounds were 406,000, 700-799 pounds were 570,000, and 800 pounds and greater were 427,000. Marketings of fed cattle during July totaled 1.98 million. Other disappearance totaled 62,000 during July.

Cattle on Feed in Historic 7 Monthly States Down 14 Percent

Cattle on feed August 1, 1996, in the historic 7 monthly States for feedlots with capacity of 1,000 or more head totaled 6.34 million, down 14 percent from the previous year and 7 percent below August 1, 1994.

Placements in feedlots during July totaled 1.48 million, 6 percent above 1995 but 2 percent below 1994. Marketings during July totaled 1.68 million, 1 percent below 1995 but 8 percent above 1994. Other disappearance during July was 46,000 head, 6 percent below last year but 18 percent above 1994.

JULY EGG PRODUCTION UP 5 PERCENT

U.S. egg production totaled 6.43 billion during July 1996, up 5 percent from the 6.15 billion produced in 1995. Production included 5.46 billion table eggs and 973 million hatching eggs, of which 914 million were broiler-type and 59.0 million were egg-type. The total number of layers during July 1996 averaged 295 million, up 3 percent from the average number of layers during July 1995. July egg production per 100 layers was 2,180 eggs, compared with 2,137 in July 1995.

All layers in the U.S. on August 1, 1996, totaled 295 million, up 3 percent from a year ago. The 295 million layers consisted of 244 million layers producing table or commercial type eggs, 48.7 million layers producing broiler-type hatching eggs, and 2.51 million layers producing egg-type hatching eggs. Rate of lay per day on August 1, 1996 averaged 70.2 eggs per 100 layers, up 2 percent from the 69.0 a year ago.

Laying flocks in the 30 major egg production States produced 6.09 billion eggs during July, up 5 percent from July 1995. The average number of layers during July, at 279 million, was up 3 percent from the year earlier.

U.S. HIRED WORKERS DOWN 5 PERCENT, WAGES UP 11 CENTS

The Nation's farms and ranches employed 1.35 million workers during the week of July 7-13, 1996. There were 1,015,000 workers hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 331,000 workers.

U.S. farm operators paid their hired workers an average wage of $6.55 per hour during the July 1996 survey week, up 11 cents from a year earlier. Field workers received an average of $6.16 per hour, up 7 cents. Livestock workers earned $6.20 per hour compared with $5.94 a year earlier.

Self-employed and unpaid workers are not published in this report. These statistics will be published annually beginning with the October survey release. Benefits will not be published in this report. These data will be collected periodically to update the data series.

U.S. JULY MILK PRODUCTION DOWN 3 PERCENT

Milk production in the 22 major States during July totaled 11.1 billion pounds, 3 percent below production in these same States in July 1995. June revised production, at 11.1 billion pounds, was 3 percent less than June 1995. On a daily basis, milk production has been below 1995 levels every month this year. In July, five States are down more than 10 percent from 1995.

Production per cow in the 22 major States averaged 1,390 pounds for July, 24 pounds below July 1995. This is the third month in a row that the rate has decreased when compared with a year ago. The number of cows on farms in the 22 major States was 7.98 million head, 86,000 head less than July 1995 and 8,000 head less than June 1996. This is the eleventh consecutive month of decline.

During the April-June period, the 22 major States produced 34.3 billion pounds of milk, 86.2 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 12.9 billion pounds for July 1996.

Farm Numbers & Land in Farms

AUGUST 1 CROP PRODUCTION FORECAST

Montana's August 1 all wheat production forecast is estimated at 194.2 million bushels. This forecast is down 13% from the July 1 estimate and down 1% from last year. For the past month, the state has experienced warm and very dry conditions which have severely stressed the small grain crop. This year's crop, if realized, would still be the third largest crop on record only due to the large increase in harvested acres.

Winter wheat production is forecast at 73.8 million bushels down 10 percent from last month but still up 35% from 1995, also due to an increase in harvested acreage. Estimated yield for winter wheat is set at 36 bushels per acre, down 4 bushels from last month's forecast and last year's final yield.

Spring wheat yield is estimated at 28 bushels per acre for a total production of 114.8 million bushels. Spring wheat production is off 15% from a month ago and down 14% from last year's record crop. A much smaller yield more than offset the increase in estimated harvested acres to bring total production down. Durum wheat yield fell 4 bushels from July 1 to 25 bushels per acre. Total production is estimated at 5.6 million bushels, down 14% from July 1 and down 29% from 1995.

Estimated barley production fell 17% from last month's forecast to 53.8 million bushels which is also down 14% from 1995. Estimated yield is set at 43 bushels per acre, down 9 from last month and last year. Forecasted oat production is set at 2.6 million bushes, down 45% from last year and is the smallest oat crop since 1985. Average yield is estimated at 52 bushels per acre down 6 bushels from July 1 and down 7 bushels from last year.

Corn growers expect to produce 2.6 million bushels of corn, up 35% from last year. Corn yields are estimated at 130 bushels per acre and if realized would be the second highest yield on record. Sugar beet production is estimated at 1.3 million tons with yields averaging 22.5 tons per acre. Dry bean production is forecast at 227,000 cwt. with yields averaging 22 cwt. per acre.

The dry weather has lowered yield prospects for hay from a year ago. Estimated yields for alfalfa are set at 2.3 tons per acre for a total production of 3.9 million tons. Some producers are not cutting a second time because of the dryness. Other hay production is forecast at 1.36 million tons with yields averaging 1.6 tons per acre.

The Nation's all wheat production for 1996 is forecast at 2.25 billion bushels, down 1 percent from July 1 but up 3 percent from 1995. U.S. yields are now expected to average 35.6 bushels per acre, down 0.3 bushels per acre from last month.

Winter wheat production is forecast at 1.49 billion bushels. This is up 1 percent from July 1, but down 3 percent from 1995. The U.S. yield is forecast at 37.3 bushels per acre, up 0.3 bushels per acre from the last forecast. Total Hard Red production is up from last month. Increased Kansas and Nebraska yields are the primary reasons.

Other spring wheat production is forecast at 635 million bushels, down 3 percent from the July forecast, but up 18 percent from 1995. This production would still be the second highest on record. Based on August 1 conditions, the U.S. yield is forecast at 32.5 bushels per acre, down a bushel from last month. Grain area totals 19.6 million acres, up 18 percent from last season. Durum wheat production is forecast at 120 million bushels, down 3 percent from last month, but up 17 percent from 1995. Based on August 1 conditions, the U.S. yield is forecast at 34.6 bushels per acre, 1.1 bushels per acre less than a month ago.

Total barley production is forecast at 388 million bushels, down 1 percent from July, but 8 percent above the 1995 production of 359 million bushels. Yields are expected to average 57.4 bushels per acre, down 0.8 bushels from July, but up 0.2 bushels from 1995. Area harvested and to be harvested, at 6.8 million acres, is 8 percent above the 6.3 million acres harvested a year earlier. Oat production for 1996 is forecast at 158 million bushels, up 2 percent from the July "Crop Production" report, but down 3 percent from last year. The forecasted yield, at 59.0 bushels per acre, is up 1 bushel from July and up 4.3 bushels from the previous year.

Sugar beet production for the U.S. is expected to total 26.1 million tons, a decrease of 7 percent from 1995. Production of dry edible beans is forecast at 27.5 million cwt. for 1996, down 11 percent from a year earlier and 5 percent below two years ago.

U.S. corn production is forecast at 8.69 billion bushels, up 18 percent from last year, but down 14 percent from the record high production of 1994. Based on August 1 conditions, yields are expected to average 118.7 bushels per acre, up 5.2 bushels from a year ago.

All hay production for 1996 is forecast at 149 million tons, down 4 percent from 1995. Alfalfa production is forecast at 80.4 million tons, down 5 percent from a year ago. All other hay production is 68.1 million tons, 2 percent below a year earlier.

PASTURE AND RANGE FEED CONDITION AUGUST 1, 1996

The month of July was characterized by warm and very dry weather conditions. The pasture and range feed condition fell significantly from a month ago with a 27 point decrease in the good to excellent range. As of August 1, the condition was rated at 2% very poor, 15% poor, 34% fair, 45% good, and 4% excellent. Most regions of the state have been hit by the dry spell and have recorded a decrease from last month.

MONTANA PRICES RECEIVED FOR JUNE

Montana crop prices for the full month of June were down from the previous month, with the exception of durum wheat and [illegible]s. Winter wheat decreased 2 cents to $5.53, while spring wheat slipped 17 cents to $5.25 per bushel. Durum wheat advanced 12 cents to $5.71 per bushel. Feed barley remain unchanged at $3.27 per bushel, while malt barley decreased 3 cents to $3.37 per bushel. Alfalfa and other hay prices slipped $1.00 per ton to $64.00 and $55.00 per ton, respectively. The all wheat price for mid-July averaged $4.99 per bushel, while the all barley price was $3.12.

Livestock prices for the full month of June were higher across the board compared with the previous month, with the exception of calves. Cow prices were up 20 cents to $32.90 per cwt, while the average price for steers and heifers improved 50 cents to $54.30 per cwt. Calf prices fell $3.50 to $55.90 per cwt. Prices received for sheep averaged $6.70 above last month at $31.90 per cwt, while lamb prices rose $4.20 to $98.80 per cwt. Milk prices decreased 20 cents to $13.90 per cwt. Steer and heifer prices for mid-July averaged $57.80 per cwt.

Nationally, steer and heifer prices averaged $59.60 per cwt for the full month of June. Cow prices came in at $30.70 and hogs were $56.20 per cwt. The U.S. all wheat price was $5.26 per bushel and $3.55 per bushel for all barley. Egg prices were 71.5 cents per dozen.

The All Farm Products Index of Prices Received in July was [illegible]ecord 119 based on 1990-92=100, up 1 point (0.8 percent) [illegible]m June. Price gains from June for cattle, corn, soybeans, and hogs more than offset price declines for wheat, cantaloupes, grapes, and strawberries. The seasonal changes in the mix of commodities farmers sell also affect the overall index level. Higher seasonal marketings of wheat, grapes, sorghum, and tomatoes more than offset the lower marketings of milk, cantaloupes, grapes, and potatoes. These changes contributed most of the one point increase in the overall index.

Compared with July 1995, the All Farm Products Index was 18 points (18 percent) higher. Price increases from July 1995 for wheat, milk, corn, and hogs more than offset price decreases for calves, lemons, and strawberries.

UNITED STATES INDEX SUMMARY

INDEX 1990-92=100	June 1995	July 1995	June 1996	July 1996
Prices Received	100	101	118	119
Prices Paid, Interest, Taxes, & Farm Wage Rates 1/	110	110	115	115
Ratio 2/	91	92	103	103

1/ Prices paid indexes (1990-92=100) published monthly beginning January 1996. Indexes for 1995 were constructed for historical comparisons. 2/ Ratio of index of prices received by farmers to index of prices paid.

FARM NUMBERS AND LAND IN FARMS UNCHANGED

Montana's estimated number of farms, at 22,000, and land in farms, at 59.7 million acres, remain unchanged from a year ago. This is the third year in a row for land in farms at this level. The average size of farm is 2,714 acres.

The number of farms in the United States in 1996 is estimated at 2.06 million, down less than one percent from 1995. Total land in farms is 968 million acres, also down less than one percent from last year. This decline in farm numbers and land in farms continues to follow historical trends. The average farm size was unchanged from 1995 at 469 acres.

The North Central Region was the only region to drop in farm numbers with a total decrease from 1995 of 11,500 farms, a 1.4 percent decline. The Northeast Region was up 0.2 percent or 300 farms. Farms in the South were up only 0.1 percent or 900 farms. The largest increase was in the West with a gain of 1,790 farms or 0.7 percent higher than 1995.

Texas remained the State with the most farms at 205,000, 3,000 more than a year earlier. Missouri was second with 104,000 farms, down 1,000 from last year, followed by Iowa with 98,000 farms, down 2,000 from 1995.

Eleven States increased in farm numbers while 20 states decreased from a year ago. Texas showed the largest increase with 3,000 farms while California and Mississippi showed increases of 2,000 farms from last year. Five States that showed the largest decreases of 2,000 farms each were Alabama, Georgia, Indiana, Iowa, and Ohio.

Texas continued to lead the nation in land in farms and ranches with 127.0 million acres, down 2 million acres from 1995. Two States with decreases of 400,000 acres in agricultural land from a year ago were Alabama and Mississippi, while New Mexico was off 300,000 acres. The largest increase in land in farms was in Louisiana with an increase of 200,000 from 1995.

The number of U.S. farms in the economic sales class between $1,000 and $9,999 increased from 1,012,920 in 1995 to 1,019,310 in 1996. Those with sales in the $10,000-$99,999 group decreased from 725,400 to 705,600. The $100,000 and over sales group increased from 333,200 to 338,100 farms.

Estimates for the number of farms and land in farms refer to June 1. A farm is defined as "any establishment from which $1,000 or more of agricultural products were sold or would normally be sold during the year."

U. S. JULY 1 CATTLE & CALF INVENTORY DOWN 1 PERCENT

All cattle and calves in the United States as of July 1, 1996, totaled 112.0 million head, down 1 percent from July 1, 1995, but up 1 percent from the 111.3 million two years ago. All cows and heifers that have calved, at 45.0 million, were down 1 percent from a year ago and slightly below two years ago. Beef cows, at 35.6 million, were 1 percent below July 1, 1995 and the same as July 1, 1994. Milk cows, at 9.4 million, were 1 percent below both July 1, 1995 and July 1, 1994.

Other class estimates on July 1, 1996, and the changes from July 1 last year and two years ago, respectively, are as follows:

- All heifers 500 pounds and over, 17.3 million, down 2 percent and down 1 percent.
- Beef replacement heifers, 5.5 million, down 4 percent and down 7 percent.
- Milk replacement heifers, 3.7 million, down 5 percent and down 7 percent.
- Other heifers, 8.1 million, up 1 percent and up 8 percent.
- Steers weighing 500 pounds and over, 15.4 million, no change and up 1 percent.
- Bulls weighing 500 pounds and over, 2.4 million, no change and up 4 percent.
- Calves under 500 pounds, 31.9 million, down slightly and up 2 percent.
- All cattle and calves on feed for slaughter, 9.8 million, down 12 percent and down 7 percent.

The 1996 calf crop is expected to be 39.8 million, down 1 percent from both 1995 and 1994. Calves born during the first half of the year are estimated at 29.3 million, down 1 percent from 1995 and the same as 1994.

JULY U.S. ALL SHEEP AND LAMBS TOTALS 10.3 MILLION HEAD

All sheep and lambs in the United States on July 1, 1996 totaled 10.3 million head, 6 percent below July 1, 1995. The number of breeding sheep and lambs on hand July 1, 1996 reached 6.17 million head, 4 percent below July 1995. Of the July 1 breeding herd, 5.08 million head were ewes one year old and older, 235,000 head were rams one year old and older, and 860,000 head were replacement lambs.

Market sheep and lambs, at 4.13 million head, were 7 percent below last July. Of the total market lambs, 61.1 percent were under 65 pounds, 20.8 percent were 65 to 84 pounds, 11.4 percent were 85 to 105 pounds, and the remainder, 6.7 percent, were over 105 pounds on July 1.

The 1996 lamb crop in the United States is expected to total 5.20 million head, down 7 percent from the 1995 lamb crop of 5.60 million head. Lambs born during January through June 1996 reached 4.48 million head or 86 percent of the yearly total. An additional 725,000 head are expected to be born during the period July through December 1996.

The July 1 sheep and lamb numbers are also published by regions. Montana is included with Colorado, South Dakota, Utah and Wyoming. The total number of sheep and lambs in the region was 3.53 million head, down 13 percent from a year ago. This region accounted for 34.3 percent of the total U.S. sheep and lambs.

The total number of breeding sheep and lambs was 1.92 million head, down 10 percent from last year. Of the total breeding sheep and lambs, 1.63 million head were ewes one year old and older, 55,000 head were rams one year old and older, and 240,000 head were replacement lambs.

All market lambs for the region on July 1, 1996 totaled 1.60 million head, down 17 percent from a year ago. Of the total market lambs, 69.9 percent were under 65 pounds, 14.4 percent were 65 to 84 pounds, 9.4 percent were 85 to 105 pounds, and the remaining 6.3 percent were over 105 pounds.

U.S. CATTLE ON FEED DOWN 14 PERCENT

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 7.84 million head on July 1, 1996. The inventory was 14 percent below the revised 9.10 million on July 1, 1995 and 4 percent below two years ago. The inventory included 5.01 million steers and steer calves. This group accounts for 64 percent of the total inventory. Heifers and heifer calves accounted for 2.79 million head.

Placements in feedlots during June totaled 1.31 million. **Net placements** were 1.24 million. During June, placements of cattle and calves weighing less than 600 pounds were 273,000, 600-699 pounds were 342,000, 700-799 pounds were 367,000, and 800 pounds and greater were 323,000. **Marketings** of fed cattle during June totaled 2.00 million. **Other disappearance** totaled 70,000 during June.

U.S. JUNE EGG PRODUCTION UP 3 PERCENT

U.S. egg production totaled 6.17 billion during June 1996, up 3 percent from the 6.01 billion produced in 1995. Production included 5.21 billion table eggs and 956 million hatching egg type, of which 897 million were broiler-type and 59.0 million were egg-type. The total number of layers during June 1996 averaged 294 million, up 2 percent from the average number of layers during June 1995. June egg production per 100 layers was 2,098 eggs, compared with 2,075 in June 1995.

All layers in the U.S. on July 1, 1996, totaled 294 million, up 2 percent from a year ago. The 294 million layers consisted of 242 million layers producing table or commercial type eggs, 49.4 million layers producing broiler-type hatching eggs, and 2.63 million layers producing egg-type hatching eggs. Rate of lay per day on July 1, 1996, averaged 70.3 eggs per 100 layers, up one percent from the 69.5 a year ago.

Laying flocks in the 30 major egg production States produced 5.83 billion eggs during June, up 3 percent from June 1995. The average number of layers during June, at 278 million, was up 1 percent from a year earlier.

MONTANA RED MEAT PRODUCTION DOWN 10 PERCENT FROM 1995

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during June 1996, down 4 percent from last month and 10 percent from the same period last year. There were 1,600 head of cattle slaughtered in June, down 100 head from a year ago. The average live weight of 1,251 pounds was 5 pounds heavier than the previous year, but the total live weight was still 3 percent below last year at 2.01 million pounds.

Hog slaughter accounted for 1,500 head, down 600 head from 1995. The average live weight of 231 pounds was down by 2 pounds from a year ago. There were 100 head of sheep slaughtered by Montana slaughter plants, 100 below the previous year. The average live weight was down 2 pounds from last year to 113 pounds.

U.S. commercial red meat production totaled 3.44 billion pounds during June, down 9 percent from a year earlier. Beef production, at 2.19 billion pounds, was down 4 percent from the previous year. Head kill totaled 3.15 million head, down 3 percent from a year earlier. The average live weight was down 15 pounds from the previous year at 1,162 pounds.

Veal production totaled 29.0 million pounds. This production was up 10 percent from a year earlier. Calf slaughter totaled 135,500 head, 15 percent above a year earlier. The average live weight was down 18 pounds to 365 pounds.

Pork production, at 1.21 billion pounds, was down 18 percent from the previous year. Hog kill totaled 6.53 million head, 17 percent below a year earlier. The average live weight decreased 2 pounds to 255 pounds. Lamb and mutton production, at 18.0 million pounds, was down 14 percent from the previous record low set in June 1979. Slaughter during June 1996 totaled 282,100 head, down 22 percent from a year earlier. The average live weight was up 3 pounds at 129 pounds.

1996 MONTANA WHEAT AND BARLEY VARIETY SURVEY

The top three **winter wheat** varieties seeded in Montana continued to be **Neeley, Tiber**, and **Rocky**. These are the same as last year with Tiber and Rocky switching positions. For the ninth consecutive year, Neeley was the leading variety accounting for more than a quarter of the winter wheat seeded. Neeley is a hard red winter wheat that generally has 1 to 3 percent lower protein than most recommended varieties. It has satisfactory milling and baking qualities. Tiber moved into second position, accounting for one-sixth of the winter wheat seeded, with the acreage nearly doubling from a year ago. Rocky fell to third place with 305 thousand acres seeded.

Amidon, Westbred Rambo, and **Grandin** rounded out the top three **spring wheat** varieties seeded this year. Amidon continued to be the most popular spring wheat for the fifth consecutive year. It accounts for 27 percent of the seeded spring wheat in Montana. Over half the Amidon was seeded in the Northeast District. Amidon has satisfactory shattering resistance and is resistant to stem and leaf rust. Its baking qualities are rated as superior with satisfactory milling qualities.

Westbred Rambo was the second most popular variety, accounting for almost 11 percent of the acreage seeded to spring wheat. Just over 82 percent of Westbred Rambo was seeded in the North Central District. Grandin moved up one position from last year to third place and accounts for nearly 9 percent of the spring wheat acreage seeded.

Kyle maintained its top **durum** variety position with over one-fifth of the durum acreage seeded. Developed in Canada and released in 1984, it is resistant to prevalent races of leaf and stem rust. It has an overall quality rating of good. **Monroe** moved up one place into second position this year, accounting for almost 20 percent of the durum acreage. **Vic** dropped one place to third position this year with nearly 13 percent of the durum wheat acreage seeded.

Nearly 43 percent of the **barley** planted was with varieties recommended for malting and brewing by the AMBA (American Malting Barley Association). **Harrington** was the top malting variety planted as well the top variety planted overall. It accounted for nearly one-third of all the barley planted and three-quarters of the varieties recommended for malting and brewing by the AMBA. Over 75 percent of the Harrington seeded was in the North Central District. **Baronesse** moved into the top position among the feed-type barleys. It accounted for over 12 percent of the barley seeded and over one-fifth of the feed-type barley.

MONTANA WHEAT & BARLEY VARIETIES

Montana's wheat & barley varieties report was made possible with funds provided by the Montana Wheat & Barley Committee and the American Malting Barley Association, Inc. A more detailed report may be obtained from our office upon request.

[1/] Revised. [2/] Soft White Wheat. [3/] American Malting Barley Associaition, Inc. Recommended for malting and brewing for Montana.

MONTANA APRIL-JUNE PRODUCTION DOWN 5 PERCENT, U.S. DOWN 2 PERCENT

Montana milk cows produced 77 million pounds of milk during the period of April-June 1996, compared with 81 million the same quarter a year ago. The 5 percent drop is attributed to the decline in milk cow inventory from 21,000 head a year ago to 20,000 head this year.

The daily amount of grain and other concentrates fed to Montana's milk cows on July 1, amounted to 17.8 pounds per cow, up 1.5 pounds from last year. The value of the grains and other concentrates fed, at $9.30 per hundredweight, increased from last year by $2.05.

During the April-June period, the 22 major States produced 34.4 billion pounds of milk, 86.2 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 13.3 billion pounds for April 1996, 13.6 billion pounds for May 1996, 13.0 billion pounds for June 1996.

The quarterly milk production for the U.S. was 39.9 billion pounds, 2 percent below the April-June period last year. The average number of milk cows in the U.S. during the April-June quarter was 9.38 million head, 100,000 head less than the same period last year.

Grain and other concentrates fed to milk cows on July 1, 1996, averaged 18.3 pounds unchanged from July 1, 1995, but down 0.3 pounds from April 1, 1996. The value of grain and other concentrates fed to milk cows on July 1, 1996 averaged a record high $9.87 per hundredweight, $2.21 or 29 percent more than the price on July 1, 1995.

U.S. PELT PRODUCTION UP 7 PERCENT

Mink pelt production in the United States in 1995 totaled 2.69 million pelts, up 7 percent from 1994. Wisconsin, the major mink producing State, produced 676,000 pelts. By color class, the number of pelts as a percent of the total U.S. production follows: Standard - 45.3 percent; Mahogany - 21.1 percent; Gunmetal - 10.6 percent; Ranch Wild - 9.8 percent; Demi-buff - 5.9 percent. The remaining color classes accounted for 7.3 percent.

Mink pelts produced during the 1995 crop year were valued at $143 million dollars, up 72 percent from $83.3 million a year ago. The average price per pelt for the 1995 crop year was $53.10, up $20.10 from the 1994 price of $33.00. The 1995 average price is the highest since the current price data series began in 1975.

Female mink bred to produce kits in 1996 totaled 678,300, down 4 percent from the previous year. Percent of total females bred to produce kits in 1996 by color class are: Standard - 49.4 percent; Mahogany - 17.7 percent; Gunmetal - 13.5 percent; Ranch Wild - 6.5 percent; Demi-buff - 4.1 percent. The remaining color classes accounted for 8.8 percent.

There were 446 mink farms producing pelts in 1995, down 3 percent from a year ago. Leading States were Utah with 130 farms, Wisconsin with 77 farms and Minnesota with 52.

There were 49 mink farms which also raised fox in 1995, compared with 47 for the previous year.

Ag Prices Received
U.S. Wheat: Supply, Disappearance, and Price

JULY 1 CROP PRODUCTION FORECAST

Montana farmers expect to produce the largest wheat crop on record. All wheat production forecast of 223.8 million bushels is up 14% from 1995 and 8% above the previous record set in 1993. Higher prices and a more liberal Farm Bill allowed producers to plant more wheat acreage. This, along with good yields, is setting the stage for a record year. Reports of drought, dry weather stressing the crop were received and several areas of the state are looking for additional moisture.

Estimated yield for **winter wheat** remains unchanged from a month ago at 40 bushels per acre. Total production, at 82.0 million bushels, is down slightly from June because of a downward revision to harvested acres. Winter wheat acres for harvest are set at 2.05 million. The winter wheat condition remains mostly good to excellent. **Spring wheat** producers intend to harvest the most acreage since 1953 at 4.1 million acres with an average yield of 33 bushels per acre. If realized, total production would be a record 135.3 million bushels, up 2% from last year. **Durum wheat** production is set at 6.53 million bushels, down nearly 18% from a year ago, due mostly to a decrease in acreage. Durum yields are estimated at 29 bushels per acre, down 1 bushel from last year.

Estimated **barley** yield is forecast at 52 bushels per acre, unchanged from last year. Producers expect to harvest 1.25 million acres. Total production is forecast at 65.0 million bushels, up slightly from a year ago. **Oat** production is set at 2.9 million bushels with yields estimated at 58 bushels per acre. Producers intend to harvest 50,000 acres of oats, the smallest acreage on record.

U.S. all wheat production for 1996 is forecast at 2.26 billion bushels, up 4 percent from 1995. U.S. yields are expected to average 35.9 bushels per acre, up 0.1 bushels per acre from a year ago. Grain area totals 63.1 million acres, up 4 percent from last season.

U.S. winter wheat production is forecast at 1.48 billion bushels. This is up 8 percent from June 1, but down 4 percent from 1995. Based on July 1 conditions, the U.S. yield is forecast at 37.0 bushels per acre, up 0.9 bushels per acre from the last forecast, but 0.7 bushels per acre less than last year. Winter wheat area for grain harvest this year is forecast at 40.1 million acres, unchanged from the June 28 "Acreage" report, but down 2 percent from 1995.

Harvesting progress trailed the average in the 19 major producing States as of June 30. Idaho and Oregon growers are still expecting record-high yields. Hard Red Winter Objective Yield head counts are still the lowest since 1989 in Kansas and Texas. Forecasted head weights are at average levels in Kansas, but below average in Texas. Oklahoma head counts are the lowest in nearly 30 years; head weights are below average. Forecasted head counts in Colorado and Nebraska improved from last month but are still below average.

Other spring wheat production is forecast at 655 million bushels, up 22 percent from 1995. This production would be the second highest on record. Based on July 1 conditions, the U.S. yield is forecast at 33.5 bushels per acre, up 1.3 bushels per acre from last year. Other spring wheat area for 1996 grain harvest is 19.6 million acre for harvest, up 18 percent from 1995. This is the largest area since 1919. Only Washington has forecast less harvested area than last year. Oregon and Washington yield prospects are up from a year ago while Idaho's are down. The Oregon forecast is up despite a reported hard frost on June 18 and 19.

Durum wheat production is forecast at 123 million bushels, up 21 percent from 1995, and the highest level since 1982. Based on July 1 conditions, the U.S. yield is forecast at 35.7 bushels per acre, up 5.2 bushels per acre from last year. Durum wheat area for grain harvest is forecast at 3.46 million acres, up 3 percent from 1995.

U.S. barley production is forecast at 394 million bushels, up 10 percent from 1995 and 5 percent from 1994. Yields are expected to average 58.2 bushels per acre, up 1.0 bushel from last year. Area harvested and to be harvested, at 6.76 million acres, is 8 percent above the 6.28 million acres harvested last year. U.S. oat production for 1996 is forecast at 155 million bushels, down 4 percent from last year. If realized, this would be the lowest oat production since records were first kept in 1866. The forecasted yield, at 58.0 bushels per acre, is up 3.3 bushels from last year's 54.7 bushels. Area harvested and to be harvested, at 2.67 million acres, is down 10 percent from the 2.96 million harvested in 1995.

PASTURE AND RANGE FEED CONDITION JULY 1, 1996

The pasture and range feed condition remained virtually unchanged from a month ago. As of July 1, the condition was rated at 0% very poor, 1% poor, 23% fair, 57% good, and 19% excellent. All regions of the state reported pasture and ranges in mostly good to excellent shape. Many areas report that rains are needed.

POTATO PLANTED AND HARVESTED ACRES - JULY 1, 1996

Montana potato producers planted 10,100 acres this year, up 300 acres from 1995. Growers intend on harvesting 10,000 acres. A cool wet spring kept plantings behind normal. Potato farmers across the United States have planted an estimated 1.45 million acres of potatoes in all four seasonal groups, up 4 percent from last year and 2 percent above 1994. Area for harvest is forecast at 1.42 million acres, a gain of 4 percent from a year ago and 3 percent above two years ago. Planted acreage for each of the seasons is above a year ago. Winter is up 2 percent, spring rose 4 percent, summer jumped 10 percent, and the fall season, with 87 percent of total U. S. acreage, gained 3 percent. Area planted to fall potatoes in 1996, Montana's seasonal group, is estimated at a record high 1.26 million acres, up 3 percent from last year and 2 percent above the previous record in 1994. Harvest is expected from 1.24 million acres, 3 percent above the last two years.

MONTANA PRICES RECEIVED FOR MAY

Montana crop prices for the full month of May were up from the previous month, with the exception of hay. Winter wheat increased 53 cents to $5.55 per bushel and spring wheat rose 44 cents to $5.42 per bushel. Durum wheat went up 17 cents to $5.59 per cwt. Barley increased a nickel to $3.32 per bushel. Alfalfa hay prices fell $3.00 per ton to $65.00 and other hay decreased $1.00 to $56.00 a ton. The all wheat price for mid-June averaged $5.34 per bushel, while the all barley price was $3.48.

Livestock prices for the full month of May were mostly higher with the exception of sheep. Cow prices were up $1.10 to $32.70 per cwt and the average price for steers and heifers increased a dime to $53.80 per cwt. Calf prices climbed $2.60 to $59.40 per cwt. Sheep prices came in $3.50 lower at $25.20 per cwt. Lamb prices jumped $7.60 to $94.60 per cwt. Milk prices increased 20 cents to $14.10 per cwt. Steer and heifer prices for mid-June averaged $53.80, while the average calf price was $58.40 per cwt.

Nationally, steer and heifer prices were $57.60 per cwt for the full month of May, down 50 cents from the previous month. Calf prices averaged 80 cents lower at $54.40 per cwt. Cow prices came in at $30.40 and hogs were $56.70 per cwt. The U.S. all wheat price was $5.73 per bushel and $3.42 per bushel for all barley. Egg prices were 69.7 cents per dozen. Mid-June steer and heifer prices, at $61.30 per cwt., averaged $3.70 higher than the full month May price. Calf prices for mid-June were $5.10 per cwt, 70 cents above the May price.

The All Farm Products Index of Prices Received in June was a record 119 based on 1990-92=100, up 8 points (7.2 percent) from May. Price gains from May for cattle, broilers, strawberries, and lettuce more than offset price declines for wheat, hay, soybeans and sweet corn. The seasonal changes in the mix of commodities farmers sell also affect the overall index level. Higher seasonal marketings of wheat, hay and grapes more than offset the lower marketings of potatoes, oranges, and tomatoes. These changes contributed four points of the eight point increase in the overall index.

PROJECTED U.S. WHEAT STOCKS

U.S. projected 1996/97 wheat supplies are up 196 million bushels from last month largely because of higher production. Reported carryin stocks were 23 million bushels above last month's forecast, but projected imports are down 10 million bushels. The larger production is due to higher area and yields for winter wheat and sharply higher spring wheat plantings than the March planting intentions. Higher domestic use, especially feed and residual use, will only partially offset the larger supplies, and projected 1996/97 ending stocks are up 88 million bushels from last month. The projected price range is down 50 cents on each end to $4.20 to $4.80 per bushel.

JUNE PLANTED ACREAGE

Montana producers planted an estimated 6.63 million acres of wheat this year and intend to harvest 6.38 million acres. This is the largest wheat planted acreage on record. A more lenient Farm Bill and strong wheat prices were the encouragement for the large increase. This year's planted acreage is 16% more than 1995. **Winter wheat** planted acreage increased 47% from a year ago to 2.2 million acres, but is slightly lower than earlier forecast. Better conditions last fall allowed farmers to plant this more normal amount of winter wheat. Winter wheat harvested acreage is estimated at 2.05 million acres. **Spring wheat** planted acreage also realized a 6% increase from last year's very large acreage. Planted spring wheat acreage is estimated at 4.2 million acres, the largest amount since 1953 when other spring wheat and durum were combined. This is nearly one million acres more than wheat growers intended on March 1 before the Farm Bill was passed. Harvested acreage is set at 4.1 million acres. **Durum** planted acres, at 230,000, fell 40,000 from 1995. For the fourth year in a row, Montana farmers planted 1.3 million acres of **barley** and intend on harvesting 1.25 million acres. **Oats** planted and harvested acreage both fell to record lows. Planted acreage is set at 100,000 acres, down 45,000 from 1995. Harvested acreage is set at 50,000 acres, down 38% from last year. **Corn planted for all purposes** this year is unchanged from a year ago at 55,000 acres. Growers intend to harvest 20,000 acres for grain, up slightly from 1995. **Sugar beet** planted acreage is set at 57,500 acres and **dry bean** planted acreage is set at 10,500 acres.

Montana farmers and ranchers plan to harvest 1.7 million acres of **alfalfa hay** this year compared with 1.6 million last year. Other hay harvested acreage is estimated at 850,000 acres, up 6% from a year ago.

At the U.S. level, all wheat planted area for 1996 is estimated at 75.6 million acres; area for grain, 63.1 million. The planted level is up 9% from 1995 and harvested is up 4%. Both totals are the highest since 1990. **Winter wheat** growers planted 52.1 million acres. This is 7% more than 1995 and fractionally higher than the previously published level. Grain area is now estimated at 40.1 million acres, up 6% from the June 1 forecast, but down 2% from last year. The jump in area for grain from the most recent forecast was based on indications from the midyear acreage surveys. These data show a larger portion of the Hard Red Winter drought affected area going for grain than earlier planned. Increases from Texas north to South Dakota total 1.5 million acres.

Other spring wheat area planted for 1996 is placed at 20.0 million acres, the most since 1936. Of this total, 19.6 million acres are expected to be harvested for grain. This would be the largest harvested area since 1919. Both acreage levels are up 18% from 1995. Strong Hard Red Spring prices fostered increases in Montana's acreage and returned North Dakota to 1993 levels. The South Dakota jump is a return to more normal planted levels. Some intended Minnesota barley and sunflower acres went to spring wheat instead. **Durum wheat** planted area is estimated at 3.57 million acres, up 4% from 1995. Intentions are to harvest 3.46 million acres for grain, up 3% from last year. Strong Hard Red Spring prices lured some Montana growers away from durum.

Barley seedings last fall and this spring totaled 7.13 million acres, up 7% from last year. This is the second lowest acreage planted since records were first kept in 1926. The area to be harvested for grain is expected to total 6.76 million acres, up 8% from last year. Oats planted last fall and this spring totaled 4.61 million acres, down 27% from 1995 and the lowest acreage planted since records were first kept in 1926. Planted **oats** acreage dropped as a result of oats not being needed as a cover crop for set aside acreage. Growers intend to harvest 2.67 million acres for grain in 1996, down 10% from the 2.96 million acres harvested in 1995. If realized, this would be the lowest oats acreage harvested for grain since records were first kept in 1866.

Corn planted for all purposes is estimated at 80.4 million acres, up 13% from last year. This is the largest planted acreage since 1985. Growers expect to harvest 74.1 million acres for grain, up 14% from 1995. If realized, this will be the largest harvested acreage since 1985. **Dry beans** planted acreage is estimated at 1.82 million acres this year, down 12% from last year and 10% below two years ago. Acreage for harvest is forecast at 1.72 million acres, off 10% from a year ago and 6% below 1994. **Sugar beet** growers planted an estimated 1.39 million acres of sugar beets for 1996, down 4% from last year.

U.S. hay producers expect to harvest 60.6 million acres of hay in 1996, a 1% increase from the 59.8 million acres harvested one year earlier. Area harvested of **alfalfa and alfalfa mixtures** is expected to total 24.3 million acres, down 1% from 1995. **All other hay** acreage is estimated at 36.3 million acres, 3% above last year. Hay acreage is expected to decrease mainly in the Great Lake States and a few Northeastern States.

The Montana crop acreage and grain stocks estimates in this issue of the Reporter are the result of surveying approximately 3,000 Montana farmers and ranchers during June. Names were selected on a statistical probability basis. SPECIAL THANKS to those operators that were interviewed and responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

1/ Preliminary. 2/ Planted for all purposes. 3/ Acreage production forecast available July 12, 1996. 4/ Production forecast available August 12, 1996. 5/ Production forecast available November 12, 1996.

JUNE SWEET CHERRY FORECAST

On June 1, 1996 **Montana's** sweet cherry growers are forecasting a crop of 00 tons, up 350 tons from 1995. Cool, wet weather this spring delayed the bloom and caused some problems with pollination. Trees planted after the killing frost of 1989 are starting to produce more. Harvest in Montana is expected to be about a week to 10 days behind normal.

U.S. sweet cherry production is forecast at 133,200 tons, down 19% from 1995 and down 36% from 1994. Increased production in California could not offset lower production in the other states. If realized, this would be the lowest production since 1985 when 132,500 tons were produced. The Michigan crop, at 2,000 tons, is 19% less than last year. Poor pollination conditions hurt crop prospects and a May frost damaged fruit buds. Oregon and Washington growers expect light crops in 1996.

U.S. MAY EGG PRODUCTION UP 2%

U.S. egg production totaled 6.35 billion during May 1996, up 2% from the 6.25 billion produced in 1995. Production included 5.35 billion table eggs and 997 million hatching egg type, of which 933 million were broiler-type and 64.0 million were egg-type. The total number of layers during May 1996 averaged 295 million, up 1% from the average number of layers during May 1995. May egg production per 100 layers was 2,151 eggs, compared with 2,137 in May 1995.

All layers in the U.S. on June 1, 1996, totaled 295 million, up 1% from a year ago. The 295 million layers consisted of 242 million layers producing table or commercial type eggs, 50.1 million layers producing broiler-type hatching eggs, and 2.67 million layers producing egg-type hatching eggs. Rate of lay per day on June 1, 1996, averaged 69.4 eggs per 100 layers, the same as last year.

Laying flocks in the 30 major egg production States produced 6.01 billion eggs during May, up 2% from May 1995. The average number of layers during May, at 279 million, was up 1% from the year earlier.

MAY RED MEAT PRODUCTION

Montana slaughter plants produced 1.4 million pounds, dressed weight, of red meat during May, 7% below last year, but 7% above last month. There were 1,600 head of cattle slaughtered last month, the same as last year. The average live weight increased 37 pounds from a year ago to 1,261 pounds.

The number of hogs slaughtered by Montana slaughter plants dropped 1,000 head from last year to 1,600 head in May. The average live weight decreased 16 pounds to 234 pounds. There were 100 head of sheep and lambs slaughtered last month, the same as a year ago. Sheep and lambs averaged 117 pounds live weight, down 2 pounds from last year.

Commercial red meat production for the **U.S.** totaled a record high 3.77 billion pounds during May 1996. April production was up slightly from the previous record high set in May 1995.

Beef production, at 2.30 billion pounds, was up 5% from the previous record high set in May 1995. Head kill totaled 3.33 million head, up 6% from a year earlier. The average live weight was down 14 pounds from the previous year, at 1,156 pounds. Veal production totaled 30.0 million pounds, up 14% from a year earlier. Calf slaughter totaled 137,200 head, 18% above a year earlier. The average live weight was down 11 pounds to 374 pounds.

Pork production, at 1.41 billion pounds, was down 7% from the previous year. Hog kill totaled 7.63 million head, 7% below a year earlier. The average live weight decreased 3 pounds to 255 pounds. Lamb and mutton production, at 21.0 million pounds, was down 5% from the previous record low set in May 1987. Slaughter totaled 324,700 head, down 12% from a year earlier. The average live weight was up 5 pounds to 132 pounds.

JUNE 1 GRAIN STOCKS

Montana's June 1 all wheat stocks totaled 27.5 million bushels, the lowest since 1974. All wheat stocks were down 51% from last year and 58% from the 10-year average. Winter wheat stocks were estimated at 7 million bushels, down 64% from June 1, 1995 and the lowest amount since winter wheat records began in 1971. All spring wheat stocks are down 34% from last year and were estimated at 20.5 million bushels--the lowest June 1 level since 1976. Durum wheat stocks, at 800,000 bushels, are off 48% from 1995 and at their lowest level since 1968. Barley stocks, at their lowest level since June 1982, are estimated at 8 million bushels, down 600,000 bushels from 1995. Oat stocks, at 870,000 bushels, are down 37% from 1995--the lowest level since 1932.

At the U.S. level, old crop all wheat stored in all positions June 1, 1996 is estimated at 375 million bushels, down 26% from June 1, 1995. Old crop durum stocks on June 1, 1996 totaled 24.7 million bushels, down 5% from last June 1. Barley stored in all positions on June 1, 1996, totaled 101 million bushels, 10% below June 1, 1995 stocks. Oats stored in all positions on June 1, 1996, totaled 66.3 million bushels, 34 percent below June 1, 1995 stocks. Corn stocks in all positions on June 1, 1996, totaled 1.72 billion bushels, 50% below a year earlier.

U.S. HOG INVENTORY DOWN 4%

U.S. inventory of all hogs and pigs on June 1, 1996, was 58.0 million head, 4% below June 1995, but 2% above the March 1, 1996 inventory. Breeding inventory, at 6.90 million head, was down 5% from June 1, 1995, but up 1% from the previous quarter. Market hog inventory, at 51.1 million head, was 3% below June 1, 1995, but 2% above March 1, 1996.

The December 95-May 1996 U.S. pig crop was 49.0 million head, 4% less than 1995 and down 5% from the same period in 1994. Sows farrowing during this period totaled 5.81 million head, down 6% from last year and 7% below two years ago. The March-May pig crop totaled 25.5 million head, down 6% from a year ago, and 9% below 1994. Sows farrowed from March to May totaled 3.01 million head, 8% less than a year ago.

U.S. producers intend to have 2.87 million sows farrow during the June-August 1996 quarter, 5% less than the actual farrowings during the same period last year, and 8% below 1994. Intended farrowings for September-November 1996, at 2.78 million sows, is 1% below actual farrowings during the same period in 1995, and down 7% from the 1994 period.

MAY MILK PRODUCTION

Milk production in the 22 major States during May totaled 11.8 billion pounds, 1 percent below production in these same States in May 1995. April revised production, at 11.5 billion pounds was slightly less than April 1995. Production per cow in the 22 major States averaged 1,477 pounds for May, 7 pounds below May 1995. This is the first month since February 1993 that the rate has decreased when compared to a year ago. The number of cows on farms in the 22 major States was 7.99 million head, 67,000 head less than May 1995 but 1,000 head more than April 1996.

During the January-March period, the 22 major States produced 33.7 billion pounds of milk, 86.1 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 13.7 billion pounds for May 1996

U.S. CATTLE ON FEED

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 8.59 million head on June 1, 1996. Placements in feedlots during May totaled 1.55 million. Net placements were 1.46 million. During May, placements of cattle and calves weighing less than 600 pounds were 301,000, 600-699 pounds were 351,000, 700-799 pounds were 523,000, and 800 pounds and greater were 372,000. Marketings of fed cattle during May totaled 2.05 million. Other disappearance totaled 84,000 during May.

Ag Prices Received
Pasture & Range Feed Condition

JUNE 1 WINTER WHEAT PRODUCTION

Montana wheat producers expect to produce 84 million bushels of winter wheat this year. The production forecast as of June 1 is unchanged from the May forecast and up 53 percent from last year. The estimated yield of 40 bushels per acre, if realized, would equal 1995's yield. Harvested winter wheat acreage also remains unchanged at 2.1 million acres, up 53 percent from a year ago. Montana's winter wheat started slowly because of the cool spring, but recent warm days have helped with the crop growth. Producers were generally optimistic about the recent crop condition, but do not want to see temperatures too hot during June. As of June 9th, the winter wheat condition was rated at 2% very poor, 11% poor, 20% fair, 57% good, and 10% excellent.

At the US level, winter wheat production is forecast at 1.37 billion bushels. This is up slightly from May 1, but down 11 percent from 1995. Based on June 1 conditions, the U.S. yield is forecast at 36.1 bushels per acre, up 0.2 bushels per acre from the last forecast, but 1.6 bushels per acre less than last year. Grain area totals 37.9 million acres, unchanged from May 1. Total Hard Red and Soft Red production are up fractionally from last month. White Winter production is up 1 percent from May 1 due to increased expected yields in Washington offsetting declines elsewhere.

Idaho and Oregon growers are still expecting record yields. Forecasted head counts from Washington's Objective Yield survey are the highest since 1981. Hard Red Winter Objective Yield head counts have improved from last month in Kansas and Texas, but declined in Oklahoma. Kansas and Texas counts are still the lowest since 1989; Oklahoma's is the lowest since 1967. Forecasted head counts in Colorado and Nebraska are also the lowest since 1989. Montana forecasted populations are about average. Soaking rains over the Memorial Day weekend were very beneficial to east central and northeastern Colorado fields. Ample May rain has caused weed problems in many Kansas stands. The Oklahoma harvest is about a week ahead of normal. Harvest should reach California's Sacramento Valley by mid-month.

Winter wheat district table is on back page.

MONTANA PRICES RECEIVED

Montana crop prices for the full month of April were up from the previous month, with the exception of malt barley. Winter and spring wheat increased 23 cents to $5.02 and $4.98 per bushel respectively. Durum wheat advanced 35 cents to $5.42 per bushel. Feed barley increased 11 cents to $3.13 per bushel, and malt barley slipped 4 cents to $3.48 per bushel. Alfalfa hay prices, at $68.00 per ton, rose $2.00 from March, while other hay prices, at $57.00 per ton, climbed $3.00 from March. The all wheat price for mid-May averaged $5.59 per bushel, while the all barley price was $3.36.

Livestock prices for the full month of April were lower across the board compared with the previous month. Cow prices were down $2.40 to $31.60 per cwt, while the average price for steers and heifers declined $2.60 to $53.70 per cwt. Calf prices fell $4.50 to $56.80 per cwt. Prices received for sheep averaged $7.00 below last month at $28.70, while lamb prices dropped $3.00 to $87.00 per cwt. Milk prices decreased 10 cents to $13.90 per cwt. Steer and heifer prices for mid-May averaged $53.00 per cwt.

Nationally, steer and heifer prices averaged $58.10 per cwt for the full month of April. Cow prices came in at $29.40 and hogs were $49.70 per cwt. The U.S. all wheat price was $5.32 per bushel and $3.25 per bushel for all barley. Egg prices were 77.0 cents per dozen.

The All Farm Products Index of Prices Received in May was a record 112 based on 1990-92=100, up 4 points (3.7 percent) from April. Price gains from April for corn, hogs, broilers, and wheat more than offset price declines for tomatoes, cucumbers, eggs, and carrots. The seasonal changes in the mix of commodities farmers sell also affect the overall index level. The mixture of commodities sold in May indicates relatively more wheat, fruits, and vegetables and less milk and meat animals resulting in an upward influence on the index. These changes contributed one point of the four point increase in the overall index.

Compared with May 1995, the All Farm Products Index was 12 points (12 percent) higher. Price increases from May 1995 for corn, hogs, wheat, and milk more than offset price decreases for lettuce, cattle, strawberries, and calves.

PASTURE AND RANGE FEED CONDITION JUNE 1, 1996

The pasture and range feed condition showed some improvement from a month ago. Last month the cool weather had limited the growth. Recent warm weather along with the ample moisture provided earlier are making for some good looking pastures. As of June 1, the condition was rated at 0% very poor, 2% poor, 22% fair, 57% good, and 19% excellent. There was a 16 point increase in the good to excellent range from May 1.

Reporters of range and pasture feed condition are asked to rate the percentage of the pastures that fall into each of the following categories:

- **Very poor** - pasture and/or ranges are providing very little or no feed for the current time of the year.
- **Poor** - pastures and/or ranges are providing marginal feed for the current time of the year. Some supplemental feeding is required.
- **Fair** - pastures and/or ranges are providing adequate feed, but less than the normal amount expected for the current time of the year.
- **Good** - pastures and/or ranges are providing the normal amount of feed for the current time of the year.
- **Excellent** - pastures and/or ranges are providing feed in excess of what is normally expected for the current time of the year.

1995 MILK PRODUCTION, DISPOSITION, AND INCOME

Montana's 1995 milk production, of 315 million pounds, increased 3 percent from 1994. An average of 21,000 milk cows were on farms during the year, the same as the previous year. The rate per cow averaged 15,000 pounds, 381 pounds above 1994.

Cash receipts from marketings of milk during the year in Montana were 40.3 million dollars, down marginally from 1994. Producer returns averaged $13.30 per cwt., a decrease of $0.47 from last year. Marketings totaled 303 million pounds, up 3 percent from a year ago. A total of 12 million pounds of milk were used on farms where produced, 7 million pounds were fed to calves, and 5 million were consumed as milk, cream, and butter.

Nationally, milk production increased 1 percent in 1995 to 156 billion pounds. The rate per cow, at 16,451 pounds, was 276 pounds above 1994. The annual average number of cows on farms, at 9.46 million head, was 39,000 less than 1994.

Cash receipts from marketings of milk during 1995, at $19.9 billion dollars, was slightly below 1994. Producer returns averaged $12.93 per hundredweight, $0.19 per hundredweight below 1994. Marketings totaled 154 billion pounds, 1 percent above 1994. Marketings include whole milk sold to plants and dealers as well as milk sold directly to consumers.

An estimated 1.56 billion pounds of milk were used on farms where produced, 8 percent less than 1994. Calves were fed 78 percent of this milk with the remainder consumed in producer households.

U.S. APRIL MILK PRODUCTION DOWN SLIGHTLY

Milk production in the 22 major States during April totaled 11.5 billion pounds, slightly below production in these same States in April 1995. March revised production, at 11.7 billion pounds, was slightly less than March 1995. Production per cow in the 22 major States averaged 1,438 pounds for April, 11 pounds above April 1995. The number of cows on farms in the 22 major States was 7.99 million head, 67,000 head less than April 1995 and 7,000 head less March 1996.

MONTANA RED MEAT PRODUCTION DOWN FROM LAST YEAR, U.S. RECORD

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during April 1996, down 1 percent from April 1995. Cattle slaughter totaled 1,500 head, 100 head more than a year ago. The average live weight, at 1,220 pounds, was up 5 pounds from a year earlier.

During April, there were 1,900 head of hogs slaughtered, 500 less than last year. The average live weight decreased 4 pounds to 245 pounds. Sheep slaughter was the same as a year earlier at 100 head, however, the average live weight dropped 14 pounds to 111 pounds.

Commercial red meat production for the United States totaled a record high 3.69 billion pounds during April, 6 percent above the previous record high set in April 1986. Beef production at 2.15 billion pounds, was up 2 percent from the previous record high set in April 1986. Beef kill totaled 3.11 million head, up 17 percent from a year earlier. The average live weight was down 11 pounds from the previous year at 1,160 pounds.

Veal production totaled 28.0 million pounds, up 28 percent from a year earlier. Calf slaughter totaled 131,400, up 34 percent from a year earlier. The average live weight was down 17 pounds to 374 pounds.

Pork production, at 1.48 billion pounds, was up 6 percent from the previous year. Hog kill totaled 8.03 million head, 6 percent above a year earlier. The average live weight decreased 3 pounds to 255 pounds. Lamb and mutton production, at 25.0 million pounds, was down 7 percent from April 1995 and tied the previous record low set in 1978 and 1979. Slaughter totaled 392,600 head, down 11 percent from a year earlier. The average live weight was up 6 pounds at 131 pounds.

U.S. CATTLE ON FEED

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 9.17 million head on May 1, 1996.

Placements in feedlots during April totaled 1.36 million. **Net placements** were 1.26 million. During April, placements of cattle and calves weighing less than 600 pounds were 204,000, 600-699 pounds were 386,000, 700-799 pounds were 478,000, and 800 pounds and greater were 296,000. **Marketings** of fed cattle during April totaled 1.90 million. During April **other disappearance** totaled 107,000.

1995 MONTANA CATTLE AND CALF LOSSES

Montana's livestock producers lost 23,000 head of cattle and 57,000 head of calves valued at an estimated total of 34.4 million dollars from all causes during 1995. The decrease in cattle and calf prices during 1995 caused per head values to be lower than the previous year and had a significant impact on the 1995 value of losses.

A total of 2,300 cattle and calves, valued at 0.9 million dollars, were lost to predators during 1995. (continued. . .)

1995 MONTANA CATTLE AND CALF DEATH LOSSES (continued)

Coyotes were the largest cause of predator losses, taking 1,100 calves during the year and costing Montana livestock producers 0.4 million dollars.

The largest number of cattle and calf losses during 1995 was due to calving problems, 15,900 head or 19.9 percent of all deaths, followed closely by weather related losses at 15,800 head or 19.8 percent. Losses due to digestive and respiratory problems were 12,600 head (15.8 percent) and 12,200 head (15.3 percent), respectively.

The largest number of calves was lost because of calving problems, at 13,900 head, and weather related problems at 13,100 head. Beside other and unknown causes, the largest number of cattle lost was due to weather related problems at 2,700 head.

In the United States, a total of 4.38 million head of cattle and calves were lost from all causes during 1995. Predators accounted for 117,400 head or 2.7 percent of all losses. These total losses cost ranchers and farmers a total of 1.80 billion dollars with predator losses amounting to 39.6 million and other losses of 1.76 billion dollars.

Coyotes were the largest cause of cattle and calf predator losses at 69,350 head or 59 percent of the total loss to predators. The value of coyote losses was 21.8 million dollars. The Western and Mountain regions of the U.S. accounted for 67 percent of all predator losses. Respiratory problems led all other causes with 28 percent of all deaths. The value of these losses was 478.0 million dollars. The second leading other cause of deaths in cattle and calves was digestive problems with 20 percent of all deaths. Losses were valued at 316.0 million dollars.

This report was a result of a cooperative effort between the National Agricultural Statistics Service, and APHIS - Animal Damage Control and APHIS - National Animal Health Monitoring Systems.

MONTANA POTATO STOCKS DOWN, LOWEST U.S. MAY STOCKS SINCE 1991

Montana's May 1 potato stocks totaled 310,000 cwt., 11 percent below last year. The May 1 stocks accounted for 11 percent of the 1995 crop, the same as the previous year. Less than 1 percent of potatoes had been planted during the first week of May compared with 7 percent planted during the same week last year.

U.S. potato stocks totaled 72.2 million cwt on May 1, 1996, down 17 percent from last year and 2 percent below two years ago. This is the lowest May 1 potato stocks level since 1991. Disappearance for the season totaled 320 million cwt of potatoes, 1 percent below last year, but 6 percent above 1994. Shrink and loss of 30.0 million cwt was 2 percent below a year ago. Processors used a record high 156 million cwt of potatoes, up 1 percent for the season. April processing totaled 16.8 million cwt, down 10 percent from a year earlier.

Processors accounted for 156 million cwt of potatoes from the 1995 crop, up 1 percent from the same period last year and 11 percent above two years ago. April processor usage was 16.8 million cwt, down 10 percent from a year ago and 3 percent below two years ago.

Disappearance from the start of harvest through April totaled 320 million cwt of potatoes, down 1 percent from last year, but 6 percent above two years ago. Shrinkage and loss was 30.0 million cwt, 2 percent below the 30.7 million cwt lost last year, but 5 percent above the losses of two years ago.

Western States potato stocks totaled 56.7 million cwt in six States, down 21 percent from last year and 8 percent below two years ago. Idaho's stocks of 34.5 million cwt were down 13 percent from a year ago, making up 60 percent of the Western total. Washington's stocks of 11.5 million cwt and Oregon's stocks of 3.0 million cwt, were off 32 and 57 percent, respectively. Colorado's stocks of 6.2 million cwt were 2 percent above last year. California's stocks were off 14 percent.

U.S. APRIL EGG PRODUCTION UP 1 PERCENT

U.S. egg production totaled 6.25 billion during April 1996, up 1 percent from the 6.18 billion produced in 1995. Production included 5.29 billion table eggs and 958 million hatching egg type, of which 895 million were broiler-type and 63.0 million were egg-type. The total number of layers during April 1996 averaged 297 million, up 1% from the average number of layers during April 1995. April egg production per 100 layers was 2,102 eggs, compared with 2,092 in April 1995.

All layers in the U.S. on May 1, 1996, totaled 295 million, up fractionally from a year ago. The 295 million layers consisted of 243 million layers producing table or commercial type eggs, 50.1 million layers producing broiler-type hatching eggs, and 2.69 million layers producing egg-type hatching eggs. Rate of lay per day on May 1, 1996, averaged 69.2 eggs per 100 layers, up slightly from a year ago.

U.S. APRIL FARM WAGE RATES

There were 2.91 million people working on the Nation's farms and ranches during the week of April 7-13, 1996. Self-employed farm operators accounted for 1.46 million of the total, along with 455,000 unpaid workers, and 780,000 workers hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 207,000 workers.

Farm operators paid their hired workers an average wage of $6.76 per hour during the April 1996 survey week, up 27 cents from a year earlier. Workers paid on an hourly basis earned $6.44 per hour compared with $6.20 last April. Field workers received an average of $6.31 per hour, up 26 cents. Livestock workers earned $6.22 per hour compared with $5.88 a year earlier.

Self-employed farm operators worked an average of 35.1 hours, compared to 35.0 hours in the comparable week in 1995. Unpaid workers averaged 31.7 hours, compared to 29.8 hours last year. Hired employees worked 40.7 hours during the week, the same as last year.

Benefits were provided for 383,000 hired workers. Farm operators provided housing for 130,000, meals for 53,000, bonuses for 99,000, health insurance for 206,000, transportation for 61,000, and other benefits for 214,000 hired workers.

AGRICULTURAL CHEMICAL USE

A portion of the 1995 Ag Chemical Usage report issued by the National Agricultural Statistics Service (NASS) is included in this Reporter. The full report and/or additional information can be obtained by calling our office at 1-800-835-2612. The data presented in the report are part of the data series on chemical use funded through the 1990 Water Quality Initiative.

Wheat Highlights

Phosphate fertilizer was applied to 54 percent of the **Winter Wheat** harvested area in the 13 surveyed States. Usage ranged from Oregon's 17 percent to 93 percent in Ohio. Growers once again treated 86 percent of the collective area with nitrogen fertilizer. Area applied exceeded 70 percent in all States except Colorado and South Dakota. Potash treatment was highest in the Soft Red Winter States once again.

All 13 states treated a portion of the harvested areas with herbicides. 2,4-D was, by far, the leader in quantity applied and was applied to 26 percent of the area surveyed. The surveyed states represented 34.3 million acres in 1995, 94 percent of the U.S. winter wheat.

For **Other Spring Wheat**, primary fertilizer area application percentages in the 4 States for 1995 were about the same as in 1994. Herbicides were widely used in all States with 2,4-D, MCPA, and Dicamba, in order most preferred. The 4 survey States totaled 15.8 million planted acres in 1995, this was 93 percent of the total U.S. planted acreage.

See tables on back page for Montana data.

MAY 1 WINTER WHEAT PRODUCTION

Montana producers expect to harvest 84 million bushels of winter wheat this year. If these early expectations hold, the crop would be 53% larger than last year and the largest crop since 1993's record high production. Producers are expecting average yield of 40 bushels per acre, which equals last year's yield.

Seeding conditions last fall allowed farmers to plant a more normal winter wheat acreage compared with the previous two years. Farmers intend to harvest 2.1 million acres this year compared with 1.37 million acres last year.

Weather conditions during the winter were generally favorable and provided adequate snow cover to protect the crop. A warm spell early this spring was followed by bitter cold temperatures that raised concerns about crop damage. Spring growing conditions have been less than favorable with cool temperatures prevailing. After the winter wheat did start growing, it became apparent that there was some winter kill, but nothing too far out of the ordinary. Most reporters say there is adequate moisture to get this year's crop off to a good start. If the weather cooperates throughout the growing season, the stage is set for a good year. As of May 5, the winter wheat condition was rated 3% very poor, 14% poor, 26% fair, 48% good, and 9% excellent.

U.S. winter wheat production is forecast at 1.36 billion bushels. This is down 12 percent from 1995 to the lowest level since 1978. Based on May 1 conditions, the U.S. yield is forecast at 35.9 bushels per acre, down 1.6 bushels per acre from last year and the lowest in 5 years. Grain area totals 37.9 million acres, down 7 percent from last season. Acres for grain are the lowest level since 1972.

Much of the central and southern Great Plains Hard Red Winter areas have been stressed by dry conditions since seeding. Apparent abandonment in states affected is about 11 million acres. Remaining stands are thin. Total Hard Red production is down 19 percent from last year. Soft Red Winter production is down 11 percent largely due to acreage reductions caused by winterkill. White Winter production is up 10 percent due to expected high yields in the Pacific Northwest.

PASTURE AND RANGE FEED CONDITION MAY 1, 1996

Although there is ample moisture, the cool weather has limited pasture and range growth around the state. As of May 1 the pasture and range feed condition was rated at 0% very poor, 11% poor, 29% fair, 57% good, and 3% excellent. The southeast and south central districts have the best reported conditions with the northeast district reporting the lowest rating.

MAY 1 HAY STOCKS

Hay stocks on **Montana** farms on May 1 were 858,000 tons, 11% more than the 772,000 tons on hand a year ago. Current stocks amount to 16% of the 1995 hay production. The slow start to this year's growing season had caused some producers to worry about running out of hay. However, the eastern portion of the state is reporting sufficient amounts of hay on hand.

At the **U.S.** level, stocks of all hay on farms totaled 20.8 million tons on May 1, virtually unchanged from the previous year. Although production of the 1995 crop was 3 percent above 1994, a cold winter and slow pasture greening this spring forced increased feeding. Disappearance of hay from December 1, 1995 - May 1, 1996, totaled 88.8 million tons, 5 percent higher than the 1994 crop disappearance of 84.5 million tons for the same period.

1995 DAIRY PRODUCTS HIGHLIGHTS

Montana dairy plants produced 178,000 gallons of lowfat, hard ice cream during 1995 compared with 127,000 gallons a year ago. Lowfat, soft ice cream production totaled 1.1 million gallons, up 27 percent from last year. Other dairy products manufactured in the state are included in U.S. totals, but are not published for Montana to avoid individual plant disclosure.

Production of butter in the United States during 1995 totaled 1.26 billion pounds, 3 percent less than 1994. California accounted for 27 percent of the production, followed by Wisconsin with 22 percent and Washington with 8 percent.

Nationally, total cheese production, excluding cottage cheeses, was 6.94 billion pounds, 3 percent above the 1994 production. Wisconsin was the leading State with 30 percent of the production. American type cheese production, at 3.13 billion pounds, was 5 percent above 1994 and accounted for 45 percent of total cheese in 1995.

Italian varieties, with 2.64 billion pounds produced, were 1 percent above the 1994 production. Mozzarella accounted for 79 percent of the Italian production followed by Ricotta with 9 percent and Provolone with 7 percent. Wisconsin was the leading State in Italian cheese production with 32 percent of the production.

Creamed cottage cheese, at 380 million pounds, was down 7 percent from 1994. Lowfat cottage cheese, at 318 million pounds, was down 1 percent.

Frozen dairy products showed mixed changes in 1995. Ice cream production totaled 857 million gallons, down 2 percent from 1994. Lowfat ice cream, at 350 million gallons, decreased 2 percent. Milk sherbet, at 53.5 million gallons, was down 1 percent. Frozen yogurt production, at 152 million gallons, rose 1 percent.

Nonfat dry milk for human food production, at 1.23 billion pounds, was up slightly from 1994. Dry buttermilk production, at 54.8 million pounds, was up 5 percent.

POULTRY PRODUCTION AND VALUE

Montana 1995 egg sales of 4.9 million were above the previous year due to increased production and higher average prices. Egg production increased 5 percent and the average price was 57 cents, up 2 cents a dozen.

Montana's value of sales from chickens, excluding broilers, saw a 73 percent increase over last year. Chickens sold for an average price of 3 cents per pound, up from 2 cents last year, and the number of pounds sold increased 16 percent.

The combined value of U.S. production from broilers, eggs, and turkeys and the value of sales from chickens in 1995, was $18.6 billion, up 4 percent from the $17.9 billion in 1994. Of the combined value, 63 percent was from broilers, 21 percent from eggs, 15 percent from turkeys, and less than 1 percent from other chickens.

The value of broilers produced during 1995 was $11.8 billion, up 3 percent from the $11.4 billion in 1994. The total number of broilers produced in 1995 was 7.33 billion, up 4 percent from 1994. The 1995 average price per pound on a live weight equivalent basis was 34.4 cents per pound, compared to 35.0 cents per pound in 1994.

The value of turkeys produced during 1995 was $2.85 billion, up 8 percent from the $2.64 billion the previous year. Turkey production in 1995 totaled 6.84 billion pounds live weight, compared with 6.54 billion pounds in 1994. The average price received by producers during 1995 was 41.6 cents per pound, compared with 40.4 cents in 1994.

See Table on back page.

MONTANA PRICES RECEIVED MIXED FOR MARCH

Montana crop prices for the full month of March were a mixed bag. Spring wheat increased 3 cents to $4.75 per bushel. Winter wheat decreased 7 cents to $4.79 per bushel, and durum wheat dropped 26 cents to $5.07 per bushel. All barley went up 2 cents to $3.31 per bushel, but oats remained unchanged at $2.06 per bushel. Alfalfa and other hay both were down $1.00 to $66.00 and $54.00 per ton, respectively. The all wheat price for mid-April averaged $5.07 per bushel, while the all barley price was $3.30.

Livestock prices for the full month of March were lower compared with the previous month, with the exception of cows, sheep and lambs. Cow prices experienced a 30 cent increase to $34.00 per cwt, while the average price for steers and heifers slipped 10 cents to $56.30 per cwt. Calf prices came in 90 cents lower at $61.30 per cwt. Prices received for sheep jumped $4.60 above last month at $35.70, and lamb prices climbed $3.40 to $90.00 per cwt. Milk prices fell $1.40 to $14.00 per cwt. Steer and heifer prices for mid-April averaged $2.40 less than the full month March price at $53.90 per cwt. Mid-April calf prices were $58.30 per cwt, $3.00 lower than in March.

Nationally, steer and heifer prices averaged $60.20 per cwt for the full month of March. Calf prices were $59.40 per cwt. Cow prices came in at $31.40 and hogs were $48.60 per cwt. The U.S. all wheat price was $5.06 per bushel and $3.26 per bushel for all barley. Egg prices were 80.3 cents per dozen. Mid-April steer and heifer prices averaged $1.40 lower than the full month March price at $58.80 per cwt. Calf prices for mid-April were $56.30 per cwt, $3.10 below the March price.

The All Farm Products Index of Prices Received in April was a record 110 based on 1990-92=100, up 1 point (0.9 percent) from March. Price gains from March for wheat, corn, soybeans, and oranges more than offset price declines for cattle, eggs, tomatoes, and lettuce. The seasonal changes in the mix of commodities farmers sell also affect the overall index level. The April mixture of commodities sold indicates relatively less grains and oilseeds and more fruits and vegetables, resulting in a downward influence on the index. However, these changes were not large enough to offset the influence of price gains from March.

Compared with April 1995, the All Farm Products Index was 11 points (11 percent) higher. Price increases from April 1995 for corn, hogs, tomatoes, and soybeans more than offset price decreases for cattle, calves, lettuce and onions.

UNITED STATES INDEX SUMMARY

INDEX 1990-92=100	Mar. 1995	Apr. 1995	Mar. 1996	Apr. 1996

MARCH 1996 PROSPECTIVE PLANTINGS

Montana growers intend to plant 5.85 million acres of wheat this year, up 2 percent from a year ago. Good moisture and more normal conditions last fall allowed producers to seed 2.25 million acres of winter wheat, unchanged from the previous estimate and up 50 percent compared with a year ago. Although still on the small side, this is a more normal amount of winter wheat seeded.

The large increase in winter wheat acreage is being off set by a large decrease in intended spring wheat plantings. Producers intend to plant 3.3 million acres of other spring wheat, down 16 percent from a year ago. Durum wheat prospective planting increased 11 percent to 300,000 acres. If realized this will be the most durum wheat acres planted since 1989.

Barley acreage intentions decreased slightly from 1995. Montana growers plan on seeding 1.25 million acres this year compared with 1.3 million acres last year. If realized, barley acreage will be at its smallest level since 1980. Montana producers only plan on planting 120,000 acres of oats this year, down 17 percent from last year. This acreage, if realized, will be the smallest planted oat acreage on record in Montana. Of the 120,000 planted, only 60,000 acres are intended to be harvested as grain.

Corn acreage is estimated at 55,000 acres planted, unchanged from a year ago. Dry bean acreage is estimated at 9,000 acres down 2,000 from last year. Sugar beet acreage is estimated at 58,000 acres, up 2,300 acres from a year ago. Farmers intend to harvest 2.4 million acres of hay this year, unchanged from 1995.

U.S. all wheat planted area for 1996 is expected to total 73.1 million acres, up 6 percent from 1995. Winter wheat seeded area for this year is 52.0 million acres, 7 percent more than 1995 and fractionally higher than the previously published level. Other spring wheat estimated plantings, at 17.5 million acres, are up 3 percent from a year ago. Durum wheat intended area for 1996 totals 3.62 million acres, up 5 percent from last year and the most since 1989. Wheat midge infestations in northern North Dakota were severe last season. Entomologists have recommended against planting wheat in some area in North Dakotas, thus limiting the potential increase in Durum.

U.S. barley growers intend to seed 7.24 million acres for 1996, up 8 percent from the 6.69 million acres seeded last year. Acreage seeded in North Dakota, the major producing State, is up 17 percent from 1995. Oat producers plan to seed or have seeded 5.30 million acres of oats for 1996, down 16 percent from the 6.34 million acres seeded for 1995. If realized this would be least acreage seeded to oats since records were first kept in 1866. Growers intend to harvest 3.17 million acres of oats for grain in 1996, up 7 percent from the 2.96 million acres harvested in 1995. If realized, this would be the second lowest acreage harvested for grain.

Corn producers intend to plant 79.9 million acres of corn for all purposes in 1996, up 12 percent from last year and 1 percent more than in 1994. Area planted to sugar beets for 1996 is expected to total 1.42 million acres in the 14 producing States, down 1 percent from a year ago. Dry bean farmers intend to plant 1.82 million acres of dry beans in 1996, down 12 percent from last year and 10 percent below 1994.

Producers expect to harvest 59.0 million acres of hay in 1996, 1 percent less than were harvested in 1995.

MONTANA PRICES RECEIVED MIXED FOR FEBRUARY

Montana crop prices for the full month of February were up from the previous month, with the exception of durum wheat and other hay. Winter wheat increased 19 cents to $4.86 per bushel, while spring wheat rose 14 cents to $4.72. Durum wheat retreated 54 cents to $5.33 per bushel. Feed barley increased 2 cents to $3.01 per bushel, and malt barley rose 17 cents to $3.54 per bushel. Both feed and malt barley set new all-time price record highs in February. Alfalfa hay prices, at $67.00 per ton, rose $2.00 from January, while other hay prices, at $55.00 per ton, remained unchanged. The all wheat price for mid-March averaged $4.83 per bushel, while the all barley price was $3.25.

Livestock prices for the full month of February were higher compared with the previous month, with the exception of calves and steers and heifers. Cow prices were up 40 cents to $33.70 per cwt, while the average price for steers and heifers declined $2.30 to $56.40 per cwt. Calf prices fell 10 cents to $62.20 per cwt. Prices received for sheep averaged $2.10 above last month at $31.10, while lamb prices climbed $6.50 to $86.60 per cwt. Milk prices increased 40 cents to $15.40 per cwt. Steer and heifer prices for mid-March averaged $56.50 per cwt.

Nationally, steer and heifer prices averaged $61.10 per cwt for the full month of February. Cow prices came in at $32.10 and hogs were $46.40 per cwt. The U.S. all wheat price was $4.99 per bushel and $3.28 per bushel for all barley. Egg prices were 76.5 cents per dozen.

The All Farm Products Index of Prices Received in March was 108 based on 1990-92=100, up 2 points (1.9 percent) from February. Price gains from February for corn, lettuce, tomatoes, and hogs more than offset price declines for broilers, cattle, and several fruit commodities. The seasonal changes in the mix of commodities farmers sell also affect the overall index level, however, these changes were essentially offsetting in March. Compared with March 1995, the All Farm Products Index was 9 points (9.1 percent) higher. Price increases from March 1995 for corn, hogs, soybeans, and wheat more than offset price decreases for cattle, calves, and several vegetables.

U.S. HOG INVENTORY UP SLIGHTLY

U.S. inventory of all hogs and pigs on March 1, 1996, was 58.6 million head, slightly above March 1995 but 2 percent below the December 1, 1995, inventory. Breeding inventory, at 6.95 million head, was down 1 percent from March 1, 1995, and down 2 percent from the previous quarter. Market hog inventory, at 51.6 million head, was slightly above March 1, 1995, but 2 percent below December 1, 1995.

Beginning March 1996 the quarterly estimating States will include Arkansas and Oklahoma but will exclude Tennessee. The report will contain an estimate for each of the quarterly States, the 17 State region, the 33 annual State region, and the U.S. total.

The December 1995-February 1996 U.S. pig crop was a record high 24.1 million head, 1 percent more than 1995 and 3 percent above the same period in 1994. Sows farrowing during this period totaled 2.86 million head, down 1 percent from both last year and two years ago. Pigs saved per litter were a record high 8.42 compared to 8.27 during the same period a year ago. Pigs saved per litter by size of operation ranged from 6.92 for operations with 1-99 hogs to 8.80 for operations with 2,000 or more hogs and pigs.

The Montana crop acreage and grain stocks report estimates in this issue of the Reporter are the result of surveying approximately 3,000 Montana farmers and ranchers during March. Names were selected on a statistical probability basis. SPECIAL THANKS to those operators that were interviewed and responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

MONTANA 1995 RED MEAT PRODUCTION DOWN, U.S. SETS RECORD HIGH

Montana slaughter plants produced 17.8 million pounds, dressed weight, of red meat during 1995, compared with 19.9 million pounds in 1994. There were 19,800 cattle slaughtered during 1995, down 12% from a year ago. The total live weight of 23.7 million pounds was also down 12% from a year earlier. The average live weight was up 1 pound to 1,200 pounds.

There were 28,800 hogs slaughtered in Montana, a decrease of 2,400 head from last year. Total live weight of 6.9 million pounds was down 9% from 1994, and the average live weight was 239 pounds per head compared with 244 pounds the previous year. Sheep slaughter amounted to 3,200 head, a decrease of 800 head from last year. The average live weight was equal to the previous year at 115 pounds. Total live weight of all sheep and lambs slaughtered in 1995 decreased 94,000 pounds from last year to 370,000 pounds.

The number of Montana slaughter plants federally inspected on January 1, 1996 was 16, down 1 from 1995. Plants, other than federally inspected, numbered 55 on January 1, 1995, but dropped to 38 for the same date in 1996. Several small plants are no longer slaughtering any livestock.

Red meat production in commercial plants and on farms for the United States during 1995 totaled 43.7 billion pounds, up 2% from the previous high set in 1994. Beef production rose 3% from the previous year at 25.2 billion pounds; veal production, at 318 million pounds, increased 9%; pork production, at 17.8 billion pounds, was up 1%; while lamb and mutton production dropped 7%, with a total of 288 million pounds.

Commercial cattle slaughter during 1995 totaled 35.6 million head, up 4% from 1994, with federal inspection comprising 97.9% of the total. This percentage remained the same as last year. The average live weight was 1,183 pounds, down 6 pounds from last year. Steers comprised 51.3% of the total federally inspected slaughter, heifers 29.2%, dairy cows comprised 8.2%, and beef cows 9.4%.

Commercial calf slaughter, at 1.43 million head, increased 13% from the previous year with 97.4% under federal inspection. The average live weight was 372 pounds, down 11 pounds from a year earlier.

Hog kill totaled 96.3 million head, up slightly from the previous record of 96.1 million head set in 1980--federal inspection comprised 97.8%. The average live weight rose 1 pound to 256 pounds. Barrows and gilts were 95.2% of the total. Commercial sheep and lamb slaughter, at 4.56 million head, decreased 8% from 1994 with federal inspection comprising 96.2%. Sheep and lambs average live weight remained unchanged from 1994 at 125 pounds.

There were 988 slaughter plants under federal inspection included in this report compared with 968 last year. Of these, 836 slaughtered at least one head of cattle and fourteen plants slaughtered almost half of the total head. Eleven of the total 802 plants slaughtering hogs, accounted for 45% of the total. Likewise, three plants slaughtering one or more head of sheep or lambs in 1995 slaughtered 56% of the total head.

MONTANA AND U.S. FEBRUARY RED MEAT PRODUCTION UP FROM 1995

Montana slaughter plants produced 1.7 million pounds, dressed weight, of red meat during February, up 25% from last year, but down 12% from last month. There were 2,000 head of cattle slaughtered, up 400 head from a year ago. The total live weight of 2.4 million pounds increased 31% from the year earlier, and the average live weight increased 35 pounds to 1,202 pounds.

Hog kill in February totaled 1,800 head compared with 2,100 head last year. The average live weight decreased 5 pounds to 241 pounds which contributed to the total live weight decreasing by 15% to 430,000 pounds. There were 100 head of sheep slaughtered in February, the same as a year ago. The average live weight dropped 2 pounds to 114 pounds. Total live weight at 15,000 pounds also dropped from last year by 1,000 pounds.

Commercial red meat production for the United States totaled 3.52 billion pounds during February, 10% above the previous record high for February set in 1995. Beef production totaled 2.05 billion pounds, up 3% from the previous record high set in February 1977. Head kill totaled 2.93 million, up 13% from a year earlier. The average live weight was down 7 pounds from last year at 1,177 pounds.

Veal production totaled 30.0 million pounds. This production was up 27% from a year ago. Calf slaughter totaled 142,500, up 34% from a year earlier. The average live weight was down 27 pounds to 355 pounds. **Continued on next page.**

MONTANA AND U.S. FEBRUARY RED MEAT PRODUCTION CONTINUED...

Pork production, at 1.42 billion pounds, was up 5% from the previous record set in February 1995. Hog kill totaled 7.66 million head, 5% above last year. The average live weight decreased 1 pound to 254 pounds.

Lamb and mutton production, at 24.0 million pounds, remained unchanged from February 1995. Slaughter totaled 363,500 head, down 3% from a year earlier. The average live weight remained unchanged at 128 pounds.

January - February red meat production was 7.34 million pounds, up 8% from the comparable period a year earlier. Accumulated beef production increased 12%, veal jumped 18%, pork rose 4%, but lamb and mutton dropped 3%.

MARCH U.S. CATTLE ON FEED

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 9.70 million head on March 1, 1996. **Placements** in feedlots during February totaled 1.71 million. Net placements were 1.64 million. During February, placements of cattle and calves weighing less than 600 pounds were 229,000, 600-699 pounds were 566,000, 700-799 pounds were 629,000, and 800 pounds and greater were 289,000. **Marketings** of fed cattle during February totaled 1.85 million. **Other disappearance** totaled 72,000 during February.

Cattle on Feed in Historic 7 Monthly States Down 1 Percent

Cattle on feed March 1, 1996, in the historic 7 monthly States for feedlots with capacity of 1,000 or more head totaled 8.15 million, down 1 percent from the previous year, but 2 percent above March 1, 1994. **Placements** in feedlots during February totaled 1.44 million, 6 percent below 1995 but 15 percent above 1994. **Marketings** during February totaled 1.54 million, up 12 percent from a year ago and 14 percent above 1994. **Other disappearance** during February was 52,000 head, the same as last year, but 9 percent below 1994.

MONTANA MARCH 1 POTATO STOCKS DOWN 5 PERCENT, U.S. DOWN 10 PERCENT

Montana producers held 2.6 million cwt. of potatoes in storage on March 1, down 5 percent from last year. The potatoes in storage account for 88 percent of 1995 production. A year ago, the potatoes in storage accounted for 85 percent of the 1994 crop production.

U.S. Potato stocks totaled 152 million cwt on March 1, 1996, down 10 percent from last year and 1 percent below two years ago. Stocks now are 39 percent of fall potato production in the 15 storage States, down two points from last year. Disappearance for the season was 239 million cwt, down slightly from last year and 8 percent above two years ago. Processors used 121 million cwt, up 3 percent.

Disappearance from harvest through February totaled 239 million cwt of potatoes, down slightly from last year, but 8 percent above two years ago. February disappearance of 32.5 million was down 2 percent from a year ago. Shrinkage and loss to date was 25.6 million cwt, down 2 percent from the 26.2 million cwt lost last year, but 3 percent above 24.9 million cwt lost two years ago.

Processor usage since harvest totaled 121 million cwt, up 3 percent from a year ago and 14 percent above two years ago. February processing of 17.5 million cwt of potatoes was up slightly from last year and 9 percent above 1994. Heavy processor use in Central States made up for slow usage in the Northwest.

Western States held 110 million cwt of potatoes in storage on March 1, 1996. This is down 14 percent from last year and 8 percent below two years ago. Idaho's stocks were off 10 percent and accounted for 56 percent of the Western total. Oregon's stocks were down 34 percent and Washington was 21 percent below a year earlier. Colorado's stocks were down 1 percent from last year and California's storage was off 22 percent.

U.S. MILK PRODUCTION UP 3 PERCENT IN FEBRUARY

Milk production in the 22 major States during February was 10.8 billion pounds, 3 percent above production in these same States in February 1995. The increase is due to February 1996 having an extra day because it's leap year. January revised production of 11.3 billion pounds was slightly less than January 1995.

Production per cow in the 22 major States averaged 1,343 pounds for February, 48 pounds above February 1995. On an average daily basis, production per cow for February was virtually unchanged from a year ago. The number of cows on farms in the 22 major States was 8.01 million head, 38,000 head less than February 1995 and 14,000 head less than January 1996.

During the October-December period, the 22 major States produced 32.7 billion pounds of milk, 86.3 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 12.5 billion pounds for February 1996.

1995 MONTANA AND U.S. WOOL PRODUCTION DOWN

Montana wool growers produced 4.4 million pounds of wool during 1995, down 13 percent from 1994. The 1995 average price per pound of wool increased 37 cents to $1.23 per pound. This resulted in a total value of $ 5.4 million, a 24 percent increase from the previous year. The total head shorn decreased 12 percent to 468,000 head. The average fleece weight dropped slightly from 9.6 pounds in 1994 to 9.4 pounds in 1995.

Shorn wool production in the United States during 1995 was 63.3 million pounds, down 8 percent from 1994. Sheep and lambs shorn totaled 8.11 million head, a decrease of 9 percent from 1994. The average price paid for wool sold in 1995 was $1.04 per pound for a total value of $64.1 million, up 22 percent from $52.4 million in 1994. The average fleece weight gained a tenth of a pound to 7.8 pounds.

MONTANA 1995 SHEEP AND LAMB LOSSES

Montana sheep & lamb producers lost 92,000 animals to weather, predators, disease and other causes during 1995, representing a total value of $5.3 million. The total number of sheep and lambs lost was down 12 percent from 1994, but the total value of inventory lost in 1995 rose 8 percent. Higher market prices this past year resulted in an increased value of sheep and lambs. The decline in sheep and lamb losses is partly due to the drop in total inventory which is down 8 percent from the previous year. Sheep and lamb deaths amounted to 9.9 percent of the January 1 inventory and lambs born, slightly lower than the previous year.

Predators caused an estimated $2.0 million in losses in 1995 up from $1.9 million the previous year. Losses due to predators amounted to 4.0 percent of the January 1 inventory and lambs born and 40 percent of all sheep and lamb deaths. Coyotes remained the largest predator and the largest cause of all deaths. The value of losses attributed to coyotes was $1.5 million. The number of sheep and lambs lost to all predators totaled 37,100 head, down 5,800 head from last year. Coyotes accounted for 30 percent of all death losses in the state and 75 percent of all predator losses. Lamb losses by all predators amounted to 31,400 head, down 14 percent from last year. Most of the decrease in lamb losses was due to a fall in fox and eagle losses. Lambs lost to eagles dropped 2,700 head while fox losses declined 2,500 head. The number of sheep lost to all predators totaled 5,700, down 14 percent. The largest cause of sheep losses was coyotes at 4,400 head.

The total value of non-predatory losses was $2.8 million in 1995 up from $2.6 million the previous year. Non-predatory losses accounted for 51 percent of all losses. There were 30,900 head of lambs lost to weather, disease and other non-predatory causes in 1995, down 12 percent from the previous year. The largest causes of lambs losses were weather conditions at 12,700 head. Adverse weather conditions resulted in a number of producers losing more newborn lambs than the previous year. Sheep losses to non-predatory factors totaled 16,000, 15 percent lower than 1994. Sheep lost to old age continued to be the largest non-predatory cause at 5,700 head, down 800 head from the previous year.

The value of sheep and lambs lost to unknown causes jumped 29 percent from last year to $.5 million. Lambs lost to unknown causes were up 1,000 head to 4,700. Unknown causes claimed 3,300 sheep, 300 head fewer than last year.

UNITED STATES FEBRUARY EGG PRODUCTION UP 5 PERCENT

U.S. egg production totaled 5.97 billion during February 1996, up 5 percent from the 5.71 billion produced February 1995. Production included 5.05 billion table eggs and 918 million hatching egg type, of which 861 million were broiler-type and 57.0 million were egg-type. The total number of layers during February 1996 averaged 299 million, up slightly from the average number of layers during February 1995. February egg production per 100 layers was 1,996 eggs, compared with 1,919 in February 1995.

All layers in the U.S. on March 1, 1996, totaled 299 million, up 1 percent from a year ago. The 299 million layers consisted of 245 million layers producing table or commercial type eggs, 51.1 million layers producing broiler-type hatching eggs, and 2.73 million layers producing egg-type hatching eggs. Rate of lay per day on March 1, 1996, averaged 69.5 eggs per 100 layers, down slightly from the 69.7 eggs a year ago.

Laying flocks in the 30 major egg production States produced 5.65 billion eggs during February, up 5 percent from February 1995. The average number of layers during February, at 283 million, was up 1 percent from the year earlier.

MONTANA WHEAT & BARLEY MOVEMENT

The 97.3 million bushels of **wheat** shipped to out-of-state destinations during June-November 1995 were 22 percent above shipments for the same period last year.

Shipments to western destinations (primarily export facilities of Washington and Oregon) were 18 percent above the previous June-November period. Wheat movement to eastern destinations was up 89 percent. Shipments to other destinations were down 153 percent.

Rail movement of 91.7 million bushels was up from 76.1 million shipped by rail during the same period in 1994. Trucks carried 5.6 million bushels compared with 3.5 million the previous June-November period.

Barley shipped to out-of-state destinations in June-November 1995 was 17.0 million bushels, down 9 percent from the same period last year.

Barley shipped west amounted to 12.2 million bushels, down 19 percent from the 15.0 million bushels in the June-November 1994 period. Eastern shipments totaled 3.9 million bushels, up 94 percent from the 2.0 million bushels the previous year.

Movement to other destinations of .8 million bushels was down 51 percent from the same period last year.

[1] Counties with less than 500 acres planted of one class of wheat are combined into "other" counties to avoid disclosure of individual information.
[2] Planted acres less winter wheat acres replanted to spring wheat.

MONTANA PRICES RECEIVED MIXED FOR JANUARY

Montana crop prices for the full month of January were higher with the exception of winter wheat and hay. Spring wheat increased 7 cents to $4.58 per bushel, but winter wheat dropped a penny to $4.67 per bushel. All barley went up 11 cents to a record high price of $3.16 per bushel. Durum wheat rose 14 cents to average $5.87 and oats increased 26 cents to $1.76 per bushel. Alfalfa hay prices fell $2.00 to $65.00 per ton, and other hay prices decreased $1.00 to $55.00 per ton. The all wheat price for mid-February averaged $4.77 per bushel, while the all barley price was $3.25.

Livestock prices for the full month of January were mostly lower compared with the previous month. Cow prices experienced a $1.20 increase to $33.30 per cwt. Steers and heifers dropped $3.60 to average $58.70 per cwt. Calf prices fell $1.50 to $62.30 per cwt. Sheep prices came in $4.40 higher at $29.00, however, lamb prices slipped 10 cents to average $80.10 per cwt. Steer and heifer prices for mid-February were $57.00 per cwt.

Nationally, steer and heifer prices averaged $62.60 per cwt for the full month of January. Cow prices were $32.00 and hogs came in at $42.30 per cwt. The U.S. all wheat price was $4.83 per bushel and $3.14 for all barley. Egg prices were 80 cents per dozen.

The U.S. All Farm Products Index of Prices Received in February was 106 based on 1990-92=100, down 2 points (1.9 percent) from January. Price gains from January for wheat, corn, hogs, and oranges more than offset price declines for cattle, milk, lettuce, and broilers. However, the seasonal changes in the mix of commodities farmers sell affected the overall index level. Lower seasonal marketings of relatively higher priced crops (e.g. wheat, corn, soybeans, and cotton) compared with livestock commodities resulted in a decline in the All Farm Products Index.

Compared with February 1995, the U.S. All Farm Products Index was 9 points (9.3 percent) higher. Higher year over year prices for wheat, corn, soybeans, and hogs more than offset lower prices for cattle, calves, and most vegetable crops.

UNITED STATES INDEX SUMMARY

INDEX 1990-92=100	Jan. 1995	Feb. 1995	Jan. 1996	Feb. 1996
Prices Received	98	97	108	106

MONTANA 1995 ALFALFA SEED PRODUCTION

Montana alfalfa seed producers harvested 3.45 million pounds of seed in 1995, 41 percent less than last year's production. Proprietary varieties made up 59 percent of this year's production, 31 percent were common uncertified varieties, and 10 percent certified public varieties.

The 1995 alfalfa seed yield per acre was 280 pounds, down from the 1994 yield of 390 pounds. There were 12,300 acres harvested in 1995, a decrease of 18 percent from last year's total. The average price received for the 1995 crop was $1.07 per pound, up 16 cents from the average price of the 1994 crop.

MONTANA 1995 CROP VALUES

The value of Montana's 1995 all wheat crop rose 49% from a year ago to a record $897.4 million. Strong wheat prices along with an above average production year are responsible for the large increase. The preliminary season average price for all wheat rose to $4.60 per bushel compared with $3.45 last year.

While the season average price moved up $1.15 per bushel for winter wheat, a much smaller crop caused only a 13% increase in value. Another record spring wheat crop and an increase of $1.04 per bushel caused a record spring wheat value of $605.2 million dollars, which is 67% of the total value for all wheat. The preliminary season average price for all three types of wheat show a dramatic improvement over a year ago and are $4.60, $4.55, and $5.05 for winter, spring, and durum, respectively.

Barley's value of production also showed a large increase over last year. The value of production for the 1995 crop is estimated at $193.4 million compared with $117.2 million for 1994. Barley production increased 18% from 1994 and the season average price increased $.88 per bushel to $3.10.

The value of all hay production increased from 1994. The preliminary season average price for all hay decreased $4.50 per ton from last year to $66.50. This year's value of production is estimated at $350.2 million, up from 1994's $315.8 million.

MONTANA RED MEAT PRODUCTION UP 13 PERCENT, U.S. PRODUCTION SETS JANUARY RECORD

Montana slaughter plants produced 1.9 million pounds, dressed weight, of red meat during January 1996, up 36 percent from the previous month, and up 13 percent from the same month a year ago. The number of cattle slaughtered, at 2,300 head increased 400 head from last year, and average live weight at 1,179 pounds increased 5 pounds from the year earlier.

The number of hogs slaughtered in January, at 2,300 head, decreased 500 head from last year. The average live weight decreased from 246 pounds to 240 pounds. There were 200 head of sheep slaughtered in January, the same as a year ago. The average live weight decreased by 3 pounds to 115 pounds.

Commercial red meat production for the United States totaled 3.81 billion pounds during January, up 7 percent from last year and 5 percent above the previous record high for January set in 1992.

Beef production totaled 2.21 billion pounds, up 10 percent from last year and slightly above the previous record high for January set in 1976. Head kill totaled 3.12 million, up 9 percent from a year earlier. The average live weight was up 4 pounds from last year at 1,193 pounds. Veal production totaled 30.0 million pounds, up 11 percent from a year earlier. Calf slaughter totaled 143,800, up 16 percent from a year ago. The average live weight was down 24 pounds to 359 pounds.

Pork production, at 1.55 billion pounds was up 3 percent from a year earlier and 2 percent above the previous January record set in 1992. Hog kill totaled 8.29 million head, up 2 percent above January 1995. The average live weight was unchanged from the previous year of 257 pounds. Lamb and mutton production, at 23.0 million pounds, was down 7 percent from January 1995. Slaughter totaled 363,200 head, down 6 percent from a year earlier. The average live weight decreased 1 pound to 126 pounds.

U.S. CATTLE ON FEED

Cattle and calves on feed for slaughter market in the United States for feedlots with capacity of 1,000 or more head totaled 9.90 million head on February 1, 1996.

Placements in feedlots during January totaled 1.60 million. Net placements were 1.54 million. During January, placements of cattle and calves weighing less than 600 pounds were 268,000, 600-699 pounds were 570,000, 700-799 pounds were 518,000, and 800 pounds and greater were 248,000. Marketings of fed cattle during January totaled 1.99 million. Other disappearance totaled 65,000 during January.

Cattle on Feed in Historic 7 Monthly States Up 2 Percent

Cattle on feed February 1, 1996, in the historic 7 monthly States for feedlots with capacity of 1,000 or more head totaled 8.30 million, up 2 percent from both the previous year and two years ago.

Placements in feedlots during January totaled 1.37 million, 16 percent below 1995 and 3 percent below 1994. Marketings during January totaled 1.68 million, up 13 percent from a year ago and 14 percent above 1994. Other disappearance during January was 49,000 head, 17 percent below last year and 6 percent below 1994.

U.S. ALL HIRED WAGE RATE HIGHER

There were 2.46 million people working on the Nation's farms and ranches during the week of January 7-13, 1996. Self-employed farm operators accounted for 1.40 million of the total, along with 348,000 unpaid workers, and 598,000 workers hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 115,000 workers.

Farm operators paid their hired workers an average wage of $6.89 per hour during the January 1996 survey week, up 16 cents from a year earlier. Workers paid on an hourly basis earned $6.44 per hour compared with $6.28 last January. Field workers received an average of $6.33 per hour, up 13 cents. Livestock workers earned $6.20 per hour compared with $6.00 a year earlier.

Self-employed farm operators worked an average of 28.7 hours, compared to 30.8 hours in the comparable week in 1995. Unpaid workers averaged 27.7 hours, compared to 28.1 hours last year. Hired employees worked 39.1 hours during the week, compared with 37.3 last year.

Benefits were provided for 329,000 hired workers. Farm operators provided housing for 102,000, meals for 36,000, bonuses for 78,000, health insurance for 173,000, transportation for 48,000, and other benefits for 191,000 hired workers.

MONTANA 1995 MILK PRODUCTION UP 3 PERCENT, U.S. PRODUCTION UP 1 PERCENT

Montana milk cows produced 315 million pounds of milk during 1995--a 3 percent increase from 1994. There were 21,000 milk cows producing milk in 1995, the same as a year earlier. The average pounds of milk produced per cow increased to 15,000 pounds in 1995 up from 14,619 pounds in 1994. The number of milk cow operations decreased to 900 in 1995 compared with 1,000 in 1994.

U.S. milk cows produced 155.6 billion pounds of milk during 1995, compared with 153.7 billion pounds in 1994 which is a 1 percent increase. There were 9.5 million cows producing milk in 1995, down fractionally from last year. These 9.5 million cows produced an average of 16,451 pounds of milk each up almost 2 percent from the previous year. There were 140,090 operations with milk cows in 1995, down 8,600 from the previous year.

Milk production in the 22 major States during January totaled 11.3 billion pounds, slightly below production in these same States in January 1995. December revised production, at 11.1 billion pounds was slightly less than December 1994.

Production per cow in the 22 major States averaged 1,402 pounds for January, 2 pounds below January 1995. The number of cows on farms in the 22 major States was 8.03 million head, 20,000 head less than January 1995 and 8,000 head less than December 1995.

During the October-December period, the 22 major States produced 32.7 billion pounds of milk, 86.3 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 13.0 billion pounds for January 1996.

MONTANA POTATO STOCKS DOWN 7 PERCENT, U.S. DOWN 8 PERCENT

Montana producers stored 2.65 million cwt. of potatoes on February 1, 1996, compared with 2.86 million cwt. a year ago. The February 1 stocks represent 90 percent of 1995 production, compared with 89 percent a year earlier. Stocks are defined as the quantity of potatoes remaining in storage for all purposes whether sold or unsold and uses, including shrinkage, waste, and other losses that occur after the date of each report. Most seed for use the following year is on hand and remains as part of stocks until planted.

The 15 major potato states held 185 million cwt of potatoes on February 1, 1996, down 8 percent from a year earlier and 1 percent below 1994. Storage accounted for 47 percent of 1995 fall production down two points from last year. Stocks by type were 3 percent red, 17 percent white, and 80 percent russets with fewer russets and more whites and reds than a year ago.

Disappearance from the start of harvest to February 1 was 207 million cwt of potatoes, down slightly from the same period a year earlier. Disappearance in January was 34.2 million cwt, down 4 percent from last year but 8 percent above two years ago. Shrink and loss to date was estimated at 22.9 million cwt, down 3 percent from last year.

Processing increased 4 percent to 103 million cwt so far this season and was 15 percent above two years ago. In January, processors used 16.1 million cwt of potatoes, down 3 percent from a year ago but 8 percent above two years ago.

Western States held 131 million cwt of potatoes in storage on February 1, 1996, down 13 percent from a year ago and 7 percent below two years ago. Each of the Western storage States are below a year ago. Idaho is down 7 percent, Oregon fell 23 percent, and Washington dropped 24 percent. Colorado's stocks slipped 2 percent below last year. These four States account for 68 percent of US potato stocks and are down 13 percent from last year. California stored 19 percent fewer potatoes than a year earlier.

U.S. JANUARY EGG PRODUCTION UP 1 PERCENT

U.S. egg production totaled 6.41 billion during January 1996, up 1 percent from the 6.37 billion produced January 1995. Production included 5.43 billion table eggs and 978 million hatching egg type, of which 919 million were broiler-type and 59.0 million were egg-type. The total number of layers during January 1996 averaged 300 million, up slightly from the average number of layers during January 1995. January egg production per 100 layers was 2,140 eggs, compared with 2,130 in January 1995.

All layers in the U.S. on February 1, 1996, totaled 299 million, up slightly from a year ago. The 299 million layers consisted of 246 million layers producing table or commercial type eggs, 50.8 million layers producing broiler-type hatching eggs, and 2.62 million layers producing egg-type hatching eggs. Rate of lay per day on February 1, 1996, averaged 68.1 eggs per 100 layers, up slightly from the 68.0 eggs a year ago.

Laying flocks in the 30 major egg production States produced 6.07 billion eggs during January, up 1 percent from January 1995. The average number of layers during January, at 283 million, was up slightly from the year earlier.

MONTANA HONEY PRODUCTION DOWN 32 PERCENT, U.S. PRODUCTION DOWN 3 PERCENT

Montana's honey producers with five or more colonies produced 8.5 million pounds in 1995, down 32 percent from the previous year. There were 106,000 colonies producing honey in 1995, compared with 119,000 in 1994. The decrease in colonies was attributed to fewer out of state colonies producing in the state, and fewer "pollinating" colonies having honey pulled off during 1995. The yield per colony decreased to 80 pounds which is 25 pounds less than 1994. The cool, wet spring and summer contributed to the lower yield. Stocks on hand December 15, 1995, totaled 1.8 million pounds, down significantly from the 3.6 million pounds in storage a year earlier.

The average price per pound received by Montana apiarists was 66 cents, up 14 cents from a year ago. The 1995 value of production for Montana's honey was 5.6 million dollars, compared with 6.5 million dollars in 1994.

U.S. honey production in 1995 from producers with five or more colonies totaled 210 million pounds, down 3 percent from 1994. There were 2.65 million colonies producing honey in 1995, compared with 2.77 million in 1994. Yield per colony averaged 79.5 pounds, up 1.1 pounds from the 78.4 pounds in 1994. Colonies which produced in more than one State were counted in each State and yields per colony may be understated. Producer honey stocks were 42.2 million pounds on December 15, 1995, down 29 percent from a year earlier.

Prices for the 1995 crop averaged 64.4 cents per pound, up 22 percent from the 1994 price of 52.8 cents per pound. Prices are based on retail sales by producers and sales to private processors and co-ops. At the U.S. level, prices for each color are derived by weighting State average prices by the State quantities sold. Prices were higher for all color classes in 1995.

JAN. CATTLE & CALF INVENTORY

There were 2.75 million cattle and calves in Montana on January 1, 1996, up 2 percent from a year ago. Excellent grazing conditions during most of the year resulted in more steers and other heifers that weighed more than 500 pounds on January 1 and accounted for most of the increase in total inventory. Steers weighing 500 pounds or more jumped 22 percent from the previous year to 330,000 head, while other heifers rose 15 percent to 265,000 head. In addition, continued poor prices for cattle during the past year has resulted in more cattle being backgrounded or placed on feed in the state rather than being sold or moved out of the state. No estimates of the number of cattle being backgrounded on January 1 are made. The number of cattle on feed for slaughter was 105,000 head, up 5 percent from last year.

While steer and heifer inventories were up significantly from the previous year, the number of beef cows that have calved were up only slightly to 1.59 million head from 1.58 million head the previous year. The milk cow numbers continued a 4-year decline, dropping 1,000 head to 20,000.

Beef heifer replacements dropped 30,000 head from the previous year to 330,000 head, while milk heifer replacements were equal to a year ago at 7,000 head. The number of bulls were off slightly this year at 93,000 head. The number of calves weighing less than 500 pounds showed the largest decrease in any of the inventories as calves fell 13 percent from last year to 135,000 head. This is the second lowest number of calves in inventory on January 1 because more calves entered the 500 pound plus weight groups.

The 1995 calf crop for Montana was 1.54 million head, up 3 percent from last year's 1.50 million head born. The number of all cattle operations dropped 2 percent from the previous year to 12,700, while the number of operations with beef cows increased 4 percent to 11,500 farms.

All cattle and calves in the United States as of January 1, 1996, totaled 103.8 million head, 1 percent above the revised 102.8 million on January 1, 1995 and 3 percent above the 101.0 million two years ago. All cows and heifers that have calved, at 44.7 million, were slightly above the revised 44.6 million on January 1, 1995 and 1 percent above the 44.2 million two years ago. Beef cows, at 35.3 million, were up 1 percent from January 1, 1995 and 2 percent above two years ago. Milk cows, at 9.41 million, were down 1 percent from both years.

Other class estimates on January 1, 1996, and the changes from January 1 last year and two years ago, respectively, are as follows:

-- All heifers 500 pounds and over, 20.1 million, up 1 percent and up 3 percent.
-- Beef replacement heifers, 6.18 million, down 4 percent and down 3 percent.
-- Milk replacement heifers, 4.11 million, down 1 percent from both years.
-- Other heifers, 9.78 million, up 5 percent and up 8 percent.
-- Steers weighing 500 pounds and over, 18.1 million, up 4 percent and up 6 percent.
-- Bulls weighing 500 pounds and over, 2.39 million, slightly above and up 4 percent.
-- Calves under 500 pounds, 18.5 million, up 1 percent and up 4 percent.

The 1995 calf crop was estimated at 40.3 million, up slightly from the revised 1994 calf crop and up 2 percent from 1993. Calves born during the first half of the year are estimated at 29.5 million, up 1 percent from 1994 and up 2 percent from 1993.

The number of operations with cattle totaled 1,212,110 during 1995, slightly below 1994 and 1 percent below 1993. Beef cow operations in 1995 were fractionally above 1994 and 1 percent above 1993. Milk cow operations were 6 percent below last year and 12 percent below two years ago.

U.S. CATTLE ON FEED UP 10%

Cattle and calves on feed for slaughter market in the United States from feedlots with capacity of 1,000 or more head totaled 10.31 million head, up 10 percent from a year ago. This inventory accounts for 81 percent of the total United States cattle and calves on feed. (See table on back page.) The inventory included 6.61 million steers and steer calves. This group accounts for 64 percent of the total inventory. Heifers and heifer calves accounted for 3.61 million head.

Placements in feedlots during December totaled 1.73 million. Net placements were 1.66 million. During December, placements of cattle and calves weighing less than 600 pounds were 457,000, 600-699 pounds were 609,000, 700-799 pounds were 410,000, and 800 pounds and greater were 251,000. This is the first time placements by weight have been published. Marketings of fed cattle during December totaled 1.66 million. Other disappearance totaled 68,000 during December.

All cattle and calves on feed for slaughter market in the United States on January 1, 1996, totaled 12.8 million head, up 3 percent from a year ago but down 2 percent from January 1, 1994.

SPECIAL THANKS to all livestock producers responding to our January 1 cattle and sheep inventory surveys. Field and telephone enumerators contacted almost 2,000 Montana farmers and ranchers early in January. Names were selected on a statistical probability basis. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics for a more efficient production and marketing system.

ALL JANUARY SHEEP & LAMB INVENTORY DOWN

The number of sheep and lambs on Montana farms and ranches totaled 465,000 head on January 1, 1996. The sheep and lamb inventory is down 9 percent from last year, a new record low. Some producers are still downsizing their flocks or getting out of the sheep business entirely due to predator problems and the phaseout of the Wool Act.

Total breeding sheep and lambs decreased 20,000 head from last year, to 430,000. Ewes one year and older were down 5 percent, at 347,000 head. The 1995 lamb crop was down 12 percent at 410,000 head.

Market sheep and lambs totaled 35,000 head with market lambs making up 94 percent of the total. Six percent of the market lambs were under 65 pounds, 27 percent were 65 - 84 pounds, 46 percent 85 - 105 pounds, and 21 percent were over 105 pounds. There were 2,200 Montana sheep operations during 1995, down 100 from 1994.

All sheep and lamb inventory in the United States on January 1, 1996, totaled 8.46 million head, down 5 percent from 1995 and 13 percent below two years ago. Inventory has slowly declined since 1942 when all sheep and lambs were a peak number of 56.21 million head.

Breeding sheep inventory was 6.22 million head on January 1, 1996, down 3 percent from 1995's 6.44 million head. Ewes one year old and older, at 5.13 million head, were 3 percent below last year's record low.

Market sheep and lambs on January 1, 1996 totaled 2.23 million head, down 9 percent from January 1, 1995. Market lambs comprised 96 percent of the total. Twenty-seven percent were under 65 pounds, 16 percent were 65 - 84 pounds, 32 percent 85 - 105 pounds, and 25 percent were over 105 pounds.

The 1995 lamb crop was down 5 percent from 1994 to a record low of 5.60 million head. This compares with the previous record low of 5.90 million head set a year ago. The 1995 lambing rate was 106 per 100 ewes one year old and older on hand January 1, 1995, compared with 102 in 1994.

The number of operations with sheep during 1995 totaled 82,120, down 6 percent from 1994 and 12 percent from 1993.

MONTANA AG PRICES UP FOR DECEMBER

Montana crop prices for the full month of December were up from the previous month, with the exception of malt barley and hay. Durum wheat climbed $1.09 to $5.73 per bushel. Winter wheat increased 9 cents to $4.68 per bushel, while spring wheat rose 8 cents to $4.51. Feed barley increased 22 cents to $2.89 per bushel, and malt barley fell 6 cents to $3.27 per bushel. Alfalfa hay prices, at $67.00 per ton, fell $2.00 from November, while other hay prices, at $56.00 per ton, dropped $1.00. The all wheat price for mid-January averaged $4.54 per bushel, while the all barley price was $3.13.

Livestock prices for the full month of December were higher compared with the previous month. Cow prices were up $2.00 to $32.10 per cwt and the average price for steers and heifers improved 10 cents to $62.30 per cwt. Calf prices rose $1.70 to $63.80 per cwt. Prices received for sheep averaged $3.60 above last month at $24.60, while lamb prices climbed $2.00 to $80.20 per cwt. Milk prices increased 35 cents to $14.15 per cwt. Steer and heifer prices for mid-January averaged $58.50 per cwt.

Nationally, steer and heifer prices averaged $64.70 per cwt for the full month of December. Cow prices came in at $30.50 and hogs were $43.50 per cwt. The U.S. all wheat price was $4.88 per bushel and $3.15 per bushel for all barley. Egg prices were 81.0 cents per dozen.

The All Farm Products Index of Prices Received in January was 110 based on 1990-92=100, up 2 points (1.9 percent) from December. Price gains from December for lettuce, corn, soybeans, and broilers more than offset price declines for cattle, hogs, cottonseed, and turkeys. The seasonal changes in the mix of commodities farmers sell also can affect the overall index level, but these changes were essentially offsetting in January. Higher relative seasonal marketings of corn, soybeans, and cattle offset the effect of relatively lower seasonal marketings of cotton, tobacco, milk, and grapes.

Compared with January 1995, the All Farm Products Index was 12 points (12 percent) higher. Higher year-over-year prices for corn, soybeans, wheat, and milk more than offset lower prices for cattle, calves, cotton, and several vegetable items.

UNITED STATES INDEX SUMMARY

MONTANA 1995 CROP PRODUCTION SECOND LARGEST ON RECORD

Montana farmers produced the second largest wheat crop on record in 1995. The spring started out wet and cool, causing some apprehension among farmers for the lateness of the crop. Sufficient moisture and heat were able to produce above average yields by the end of the summer. The eastern portion of the state did suffer some heat damage which lowered potential yields.

Winter wheat seedings totaled 1.5 million acres, the smallest seeding since 1951. The dry fall of 1994 caused many farmers to switch to spring wheat for the 95 crop year. Farmers harvested 1.37 million acres with a average yield of 40 bushels per acre, the second highest yield on record. Total production was estimated at 54.8 million bushels, down 15% from last year.

The decrease in winter wheat acreage was made up by a large increase in other spring wheat. Farmers planted the largest other spring wheat acreage since 1953 when durum and other spring wheat were combined. There were 3.95 million acres planted with 3.8 million acres harvested. Yields average 35 bushels to the acre, also the second highest yield, only behind 1993's record. The increase in acreage and good yield produced the largest spring wheat crop ever.

Better prices resulted in a large increase in durum wheat acreage planted. Farmers seeded 270,000 acres in 1995 compared with 180,000 in 1994. Yields averaged 30 bushels to the acre on the 265,000 acres harvested. Yields, in the northeast where most of the durum is grown, were hurt by prolonged heat stress. Total production of durum was estimated at 7.95 million bushels, up 49% from the previous year.

Barley growers planted 1.3 million acres and harvested 1.2 million acres this year, both unchanged from 1994. Producers realized a yield of 52 bushels per acre, which tied with the second highest yield on record. Total production was 62.4 million bushels, up 18% from a year ago.

Oat production totaled 4.72 million bushels, up 31% from 1994. Producers harvested 80,000 acres with an average yield of 59 bushels per acre.

Farmers also realized a record year for all hay production at 5.36 million tons. Yields average 2.23 tons per acre on 2.4 million acres. Alfalfa harvested acreage accounted for 1.6 million acres of the total with a yield of 2.5 tons per acre for a record production of 4.0 million tons. Other hay harvested acreage was 800,000 acres with a yield of 1.7 tons per acre which ties the highest other hay yield record.

CHERRY PRODUCTION

Montana production of sweet cherries was estimated at 650 tons, down 100 tons from 1994. This year's crop was hit with cool wet weather during pollinating causing a decrease in total production. Utilized production totaled 540 tons--also down 100 tons. The average price was $1,340 per ton, up $140 from a year ago, for a total value of production at $721,000.

U.S. sweet cherry production in 1995 was estimated at 165,250 tons, down 20 percent from 1994. Utilized production totaled 152,850 tons. The U.S. average price was $1,260, up $220 from a year ago.

MONTANA POTATO STOCKS DOWN 10 PERCENT, U.S. DOWN 8 PERCENT

Montana producers stored 2.7 million cwt. of potatoes on January 1, 1996, compared with 3 million cwt. a year ago. The January 1 stocks represent 92 percent of production from the 1995 crop, compared with 94 percent a year earlier.

The **15 major potato** States held 219 million cwt of potatoes on January 1, 1996, down 8 percent from a year earlier but 1 percent above 1994. Storage accounted 56 percent of 1995 fall production, down 2 percent from last year. Stocks by type were 3 percent red, 18 percent white, and 79 percent russet.

Disappearance from the start of harvest to January 1 was a record 173 million cwt. of potatoes, up 1 percent from the same period in 1995. Disappearance in December 1995 was 33.1 million cwt, down 4 percent from last year, but 4 percent above two years ago. Shrink and loss to date was estimated at 20.1 million cwt, down 5 percent from last year.

So far this season, processing increased 6 percent to 87.2 million cwt. and was 16 percent above two years ago. In December, processors used 16.2 cwt of potatoes, fractionally above a year ago and 17 percent above two years ago.

Western States held 153 million cwt. of potatoes in storage on January 1, 1996, down 12 percent from the previous year and 5 percent below two years ago. Each of the Western storage States were below a year ago. Idaho was down 7 percent, Oregon fell 20 percent and Washington dropped 23 percent. Colorado stocks slipped 1 percent below last January. These four States accounted for two-thirds of U.S. Potato stocks and are down 12 percent from last year. California stored 5 percent fewer potatoes than a year earlier.

MONTANA ANNUAL CROP SUMMARY, 1992-95 1/

Crop	Year	Acreage		Yield Per Acre	Total Production	Season Avg Price	Value of Production	US Production
		Planted	Harvested					
		Thousands		Bushels	Thousands		Thousands	Thousands

MONTANA DECEMBER MILK PRODUCTION UNCHANGED, U. S. PRODUCTION UP SLIGHTLY

During the October - December quarter, Montana milk cows produced 79 million pounds of milk, unchanged from the same quarter a year ago. Montana milk cow numbers dropped 1,000 head from last year to 20,000 head.

Grain and other concentrates fed to Montana's milk cows on January 1 averaged 18 pounds per day, the same as a year earlier. The value of grain and other concentrates fed to cows on January 1, averaged $7.80 per cwt., up $0.75 from January 1, 1995.

Milk production in the 22 major States during December totaled 11.1 billion pounds, slightly above production in these same States in December 1994. November revised production, at 10.6 billion pounds, was slightly more than November 1994.

Production per cow in the 22 major States averaged 1,373 pounds for December, 3 pounds above December 1994. The number of cows on farms in the 22 major States was 8.08 million head, 12,000 head less than December 1994 and 6,000 head less than November 1995.

During the October-December period, the 22 major States produced 32.7 billion pounds of milk, 86.3 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 12.8 billion pounds for October, 12.3 billion pounds for November, and 12.8 billion pounds for December 1995.

The quarterly production of milk for the U.S. was 37.9 billion pounds, slightly below the October-December period in 1994. The average number of milk cows in the U.S. during the October-December quarter was 9.49 million head 37,000 less than the same period a year earlier.

Grain and other concentrates fed to milk cows on January 1, 1996, averaged 18.8 pounds per cow, 0.1 pound less than January 1, 1995. The value of grain and other concentrates fed to cows on January 1, averaged $8.51 per hundredweight, $0.85 more than January 1, 1995.

MONTANA AND U.S. DECEMBER RED MEAT PRODUCTION DROPS

Montana slaughter plants produced 1.4 million pounds, dressed weight, of red meat during December 1995, 6 percent below the previous month and 17 percent below the previous year. The number of cattle slaughtered, at 1,600 head, was 300 head below last year. The average weight was 1,175, up 19 pounds from a year ago.

There were 2,000 hogs slaughtered in Montana during December, down 1,000 head from a year ago. The average live weight was 241 pounds, down 6 pounds from last year. Sheep slaughter fell 100 head from last year to 300 head, while the average live weight increased 4 pounds to 115 pounds.

U.S. commercial red meat production totaled 3.55 billion pounds during December, 5 percent below last year. Beef production totaled 1.99 billion pounds, down 2 percent from the previous year. Head kill totaled 2.81 million, down 2 percent from a year earlier. The average live weight, at 1,193 pounds, was up 4 pounds from last year.

Veal production totaled 26.0 million pounds, unchanged from a year earlier. Calf slaughter totaled 128,700, up 4 percent from a year earlier. The average live weight was down 15 pounds to 354 pounds.

Pork production, at 1.51 billion pounds, was down 8 percent from a year earlier. Hog kill totaled 8.06 million head, 8 percent below December 1994. The average live weight was down 3 pounds to 257 pounds. Lamb and mutton production, at 23.0 million pounds, was down 11 percent from December 1994. Slaughter totaled 370,800 head, down 13 percent from a year earlier. The average live weight increased 3 pounds to 126 pounds.

January-December red meat production was 43.4 billion pounds, up 2 percent from the comparable period a year ago. Accumulated beef production rose 3 percent, veal jumped 8 percent, pork was up 1 percent, but lamb and mutton dropped 7 percent.

1995 EGG PRODUCTION & CHICKEN INVENTORY

Montana chickens produced 104 million eggs during the year ending November 30, 1995. This is up 5 percent from last year. Our state averaged 381,000 layers in 1995, compared with 374,000 the previous year. The annual average production per layer on hand was 273 eggs, up 3 percent from a year ago.

There were 540,000 total chickens on Montana farms and ranches on December 1, 1995, compared with 510,000 on hand last year. The December 1, 1995 inventory included 288,000 layers 20 weeks old, 43,000 between 13 and 20 weeks old, and 106,000 pullets 13 weeks and under. The total value of all chickens on December 1, 1995, was 1.35 million dollars, down 2 percent from the previous December. The average value per bird dropped 20 cents from last year to $2.50.

U.S. egg production during the year ending November 30, 1995 totaled 74.3 billion eggs, up fractionally from the previous year's total of 73.9 billion eggs. Layer numbers during 1995 averaged 294 million, up 1 percent from the year earlier. The annual average production per layer on hand in 1995 was 253 eggs, compared with the 1994 average of 254 eggs per layer.

The total number of chickens on hand on December 1, 1995 (excluding commercial broilers) was 384 million head, up fractionally from last year.

Potential layers (layers 20 weeks old and older, plus pullets 13 weeks and older, but less than 20 weeks) on hand December 1, 1995, totaled 331 million, virtually unchanged from December 1, 1994. Of the 331 million potential layers, 90 percent were 20 weeks old and older and the remainder were pullets 13 weeks and older, but less than 20 weeks.

The total value of all chickens on December 1, 1995 was $916 million, up 2 percent from December 1, 1994. The average value increased from $2.35 per bird on December 1, 1994 to $2.38 per bird on December 1, 1995.

NATION'S DECEMBER EGG PRODUCTION UP SLIGHTLY

U.S. egg production totaled 6.53 billion during December 1995, up slightly from the 6.52 billion produced December 1994. Production included 5.56 billion table eggs and 975 million hatching egg type, of which 919 million were broiler-type and 56.0 million were egg-type. The total number of layers during December 1995 averaged 299 million, down slightly from the average number of layers during December 1994. December egg production per 100 layers was 2,185 eggs, compared with 2,176 in December 1994.

All layers in the U.S. on January 1, 1996, totaled 300 million, down slightly from a year ago. The 300 million layers consisted of 247 million layers producing table or commercial type eggs, 50.5 million layers producing broiler-type hatching eggs, and 2.56 million layers producing egg-type hatching eggs. Rate of lay per day on January 1, 1996, averaged 69.9 eggs per 100 layers, down slightly from the 70.0 eggs a year ago.

Laying flocks in the 30 major egg production States produced 6.18 billion eggs during December, up slightly from December 1994. The average number of layers during December, at 283 million, was down slightly from the year earlier.

WINTER WHEAT SEEDINGS

Montana farmers experienced much better seeding conditions for the 1996 winter wheat crop compared with last year. For the most part there was adequate moisture which allowed farmers to plant a more normal amount of winter wheat. Estimated total winter wheat seedings for 1996 are set at 2.25 million acres, up 50% or 750,000 acres from last year's revised 1.5 million acres. These projected seedings are still slightly below the last 10-year average of 2.3 million. Planting started out slightly behind normal as farmers in some areas waited for moisture, when the moisture did arrive, conditions allowed seeding to go ahead of normal and be 98% complete as of October 1. The winter wheat condition seems to be in very good shape. As of December 31, producers rated the crop as 7% poor, 19% fair, 73% good, and 1% excellent.

U.S. winter wheat seedings for 1996 harvest are expected to total 52.0 million acres, up 7% from 1995. This is the largest acreage since 1990. About 98% of the U.S. acreage was seeded by December 1.

Hard red winter wheat, at 35.8 million acres, is also up 6% from 1995 mainly due to jumps in Montana and South Dakota. Seeding of hard red was generally slowed by dryness in the Plains, except in Oklahoma, where September wetness delayed the start. Seeding into last spring's idled acres was common in South Dakota. The dry conditions may have prevented some Kansas planting, and has curtailed grazing in Oklahoma and the Texas High Plains.

MONTANA 1995 WHEAT CROP

Montana 1995 winter wheat plantings are set at 1.5 million acres, revised down 100,000 acres from September's figure. Harvested acres are set at 1.37 million acres also down 80,000 from September. Average yields remain at 40 bushels per acre for a total production of 54.8 million bushels. Spring wheat planted acreage increased to 3.95 million acres and harvested acreage increased to 3.8 million acres. Spring wheat yields remain at 35 bushels per acre for a total production of 133 million bushels. Durum wheat acreage did not change and remains at 270,000 acres planted and 265,000 acres harvested. Yields averaged 30 bushels per acre for a total production of 7.95 million bushels.

LATE SEASON CROPS

Corn growers in Montana harvested 16,000 acres of corn for grain, down from 20,000 last year, while harvested acreage for silage is set at 38,000 acres--slightly below 1994. Corn for grain yields were down 15 bushels from last year's record yield and are estimated at 120 bushels per acre. This year started out cool and wet holding yields down slightly. Corn for silage yield is estimated at 20 tons per acre, down 1 ton from a year ago.

U.S. corn for grain production was estimated at 7.37 billion bushels, down 27% from the record high 1994 crop of 10.1 billion bushels. The U.S. yield of 113.5 bushels per acre was down 25.1 bushels from the record high of last year.

Montana **sugar beet** producers harvested 55,500 acres--up 1,500 from 1994. Total sugar beet production is estimated at 1.2 million tons, down nearly 9% from last year's record production. The season started out cool and wet ending up in a late harvest. Average yield, at 21.5 tons per acre, was down 2.7 tons per acre from last year's record yield.

U.S. production of sugar beets in 1995 totaled 28.0 million tons, down 12% from last year's output. Yield per acre averaged 19.7 tons, down 2.4 tons from the previous year. Area harvested totaled 1.42 million acres, down 2% from last year.

Dry bean growers in Montana produced an estimated 205 thousand cwt. of dry beans in 1995, down 7% from last year. Producers harvested 10,800 acres, up 800 acres from last year.

U.S. dry edible bean production is estimated at 31.0 million cwt. in 1995, a gain of 7% from 1994 and 42% above 1993. This is the largest bean crop since 1991. Farmers harvested 1.90 million acres, up 3% from 1994 and 17% above 1993. The average yield, at 1,634 pounds per acre, increased 52 pounds from 1994.

Montana **hay** growers harvested 2.4 million acres of all hay in 1995, up 9% compared with a year ago. All hay average yield totaled 2.23 tons per acre for a total production of 5.36 million tons. Alfalfa harvested acreage is set at 1.6 million acres with an average yield of 2.5 tons per acre for a total production of 4.0 million tons. Other hay harvested acreage totaled 800,000 acres with an average yield of 1.7 tons per acre for a total production of 1.36 million tons.

All hay production for the U.S. was estimated at 155 million tons, 3% above the previous year's total and 5% above the output of two years ago. The average yield per acre was 2.59 tons, slightly above the 2.55 ton average in 1994.

Montana **hay stocks** were estimated at 4.93 million tons on December 1. This is a 25% increase from last year's 3.95 million tons. The large increase in stocks is due mainly to the 18% increase in all hay production from last year.

U.S. stocks of all hay on farms totaled 110 million tons on December 1, 1995, 4% above the stocks of one year earlier.

STATE DOCUMENTS COLLECTION

MAR 01 1996

MONTANA STATE LIBRARY
1515 E. 6th AVE.
HELENA, MONTANA 59620

DECEMBER 1 GRAIN STOCKS

Montana wheat stocks on December 1, 1995 amounted to 129 million bushels, 9 percent less than last year's inventory. This year's December inventory is 7 percent below the 10-year average. All wheat disappearance in the September through November quarter was 78 percent more than the 10-year average.

Barley stocks, in all locations on December 1, amounted to 33.5 million bushels down 17 percent from last December. Oat stocks, at 4.44 million bushels, are up 46 percent from last year.

U.S. all wheat stored in all positions on December 1, 1995 is estimated at 1.34 billion bushels, down 10 percent from December 1, 1994. This is the lowest December 1 total since the reference date was changed in the 1986-87 marketing year.

Durum wheat stocks in all positions on December 1, 1995 totaled 71.0 million bushels, up 8 percent from a year earlier.

Barley stored in all positions on December 1, 1995, is estimated at 240 million bushels, down 14 percent from the stocks of December 1, 1994.

Oats stored in all positions on December 1, 1995, is estimated at 153 million bushels, down 20 percent from the stocks of December 1, 1994.

MONTANA AG PRICES MIXED FOR NOVEMBER

Montana crop prices for the full month of November were mixed with spring wheat, barley and alfalfa prices up. Spring wheat increased 6 cents to $4.43 per bushel. All barley went up 17 cents to average $3.05, but oats decreased a penny to $1.49 per bushel. Durum wheat fell 28 cents to $4.64 per bushel and winter wheat dropped 4 cents to $4.59 per bushel. Alfalfa hay prices rose $3.00 to $69.00 per ton, but other hay prices decreased $1.00 to $57.00 per ton. The all wheat price for mid-December averaged $4.82 per bushel, while the all barley price was $3.20.

Livestock prices for the full month of November were lower compared with the previous month. Cow prices dropped $2.30 to $30.10 per cwt. and steers and heifers slipped 80 cents to average $62.20 per cwt. Calf prices fell $2.70 to $62.10 per cwt. Sheep prices averaged $21.00 per cwt, $2.30 lower than the previous month. Lamb prices were $2.20 below last months price at $78.20 per cwt. Steer and heifer prices for mid-December were $62.40 per cwt.

Nationally, steer and heifer prices averaged $65.20 cwt. for the full month of November. Cow prices came in at $29.70 and hogs were $39.90 per cwt. The U.S. all wheat price was $4.82 per bushel and $3.09 per bushel for all barley. Egg prices were 76 cents per dozen.

The U.S. All Farm Products Index of Prices Received in December was 107 based on 1990-92=100, up 1 point (0.9 percent) from November. Price gains from November for corn, hogs, soybeans, and eggs more than offset price declines for broilers, turkeys, lemons, and lettuce. The seasonal changes in the mix of commodities farmers sell also can affect the overall index level, but these changes were essentially offsetting in December. Higher relative seasonal marketings of wheat, tobacco, milk, and cotton offset the effect of relatively lower seasonal marketings of cattle, corn, soybeans, and grapes.

UNITED STATES INDEX SUMMARY

MONTANA HOG INVENTORY DOWN 14 PERCENT

There were 180,000 hogs in Montana's inventory on December 1, 1995 down 14 percent from last December's total. The breeding herd was reduced to 19,000 compared with 22,000 on hand December 1, 1994 and market hogs and pigs accounted for 161,000 head, down from 188,000 last December 1. The 1995 pig crop was estimated at 372,000, down significantly from the 403,000 produced in 1994. There were 900 operations with hogs and pigs during 1995, up from 700 operations in 1994.

The U.S. inventory of all hogs and pigs on December 1, 1995 was 60.2 million head, slightly above December 1994, but 1 percent below the September 1, 1995 inventory. This is the highest December inventory since 1980. Breeding inventory, at 7.13 million head, was up 1 percent from both December 1, 1994 and September 1, 1995. Market hog inventory, at 53.1 million head, was slightly above last year, but 2 percent below last quarter.

The September-November 1995 U.S. pig crop, at 24.9 million head, was 2 percent more than 1994 and 4 percent more than 1993. Sows farrowing during this period totaled 2.99 million head, only 9,000 head below last year. Litter rate increases continue at a record level with an average of 8.34 pigs saved per litter for the September-November period. Last year the litter rate averaged 8.18 pigs per litter. Hot weather late last summer did not significantly reduce farrowings or litter rates. This is largely due to increased production by larger operations with environmentally controlled facilities which minimize the affects of adverse weather. In addition, market hog prices, relative to corn prices, provided little incentive for herd reduction. Pigs saved per litter by size of operation ranged from 7.45 for operations with 1-99 hogs to 8.64 for operations with more than 2,000 hogs and pigs.

U.S. hog producers intend to have 2.92 million sows farrow during the December 1995-February 1996 quarter, 1 percent more than the actual farrowings during the same period last year and 199[illegible] Intended farrowings for March-M[illegible] 1996, at 3.31 million sows, are 2 percent above 1995, but 2 percent below the 1994 period. The December-May intentions utilize 87.4 percent of the breeding herd, compared with 87.0 for actual farrowings last year and the 5-year average of 86.7 percent.

The number of operations with hogs totaled 182,700 during 1995, down 12 percent from last year and 19 percent below 1993. Places with 2,000 or more hogs on hand accounted for 3 percent of the operations and 43 percent of the inventory. A year ago 2 percent of the operations had inventories over 2,000 head and accounted for 37 percent of the inventory. Considering all hog operations, currently 6 percent control 60 percent of the total inventory.

CATTLE ON FEED UP 2 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 9.07 million head, up 2 percent from a year ago but down 3 percent from December 1, 1993.

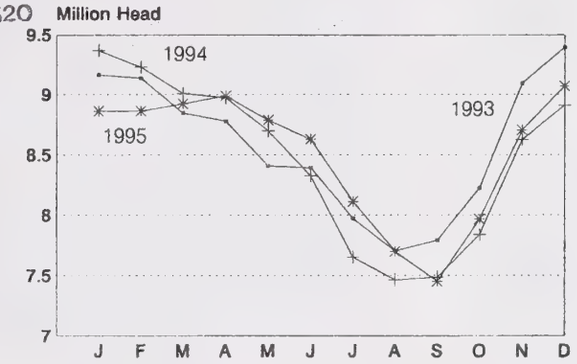
Placements in feedlots during November totaled 2.00 million, 8 percent above 1994 and 6 percent above 1993. Net placements of 1.94 million for November were up 9 percent from last year and 1993.

Marketings during November totaled 1.57 million, up 5 percent from 1994 and up 7 percent from 1993. This is the largest November marketings since 1978. Other disappearance during November was 61,000 head, 14 percent below 1994 and 44 percent below 1993.

Cattle on Feed in 1000+ Capacity Feedlots Up 4 Percent

Cattle and calves on feed December 1, 1995, for the 7 States in the feedlots with 1,000 or more head capacity totaled 8.44 million head, up 4 percent from the previous year and 1 percent above 1993. The inventory in the 1,000+ capacity feedlots accounted for 93 percent of the total inventory.

CATTLE ON FEED
7 STATES
(AZ, CA, CO, IA, KS, NE, TX)



NOVEMBER RED MEAT PRODUCTION

Montana slaughter plants produced 1.48 million pounds, dressed weight, of red meat during November 1995, down 10 percent from last year. During November, 1,700 head of cattle were slaughtered, the same as a year ago. The average live weight of 1,182 pounds was down 5 pounds from 1994.

There were 2,100 hogs slaughtered during November, down 900 head from last year. The average live weight decreased 6 pounds to 244 pounds. The total number of sheep slaughtered during the month decreased 100 head from a year ago to 300 head. The average live weight decreased 1 pound from the previous year to 114 pounds.

Commercial red meat production for the United States totaled 3.75 billion pounds during November, 2 percent above the previous November record set in 1994.

Beef production totaled 2.09 billion pounds, up 6 percent from the previous year. Head kill totaled 2.97 million, also up 6 percent from a year earlier. The average live weight at 1,188 pounds was down 3 pounds from last year.

Veal production totaled 27.0 million pounds, up 5 percent from a year earlier. Calf slaughter totaled 129,000, up 10 percent from a year earlier. The average live weight was down 16 pounds to 356 pounds.

Pork production, at 1.61 billion pounds, was down 2 percent from a year earlier. Hog kill totaled 8.60 million head, 2 percent below November 1994. The average live weight was down 3 pounds to 258 pounds. Lamb and mutton production, at 23.0 million pounds, was down 5 percent from November 1994. Slaughter totaled 377,900 head, down 7 percent from a year earlier . The average live weight increased 4 pounds to 124 pounds.

January-November red meat production was 39.9 billion pounds up 3 percent from the comparable period a year ago. Accumulated beef production was up 4 percent, veal was up 9 percent, pork was up 2 percent, but lamb and mutton was down 7 percent.

PLEASE RETURN

MONTANA POTATO PRODUCTION AND DECEMBER 1, STOCKS DOWN 8 PERCENT

Montana's 1995 potato production at 2.94 million cwt. is 8 percent below production a year ago. Cool wet weather at planting time and at the end of summer contributed to the lower production and to smaller size potatoes. Stocks on hand December 1 amounted to 2.8 million cwt. which is 95 percent of production and an 8 percent decrease from last year.

Montana growers planted and harvested 9,800 acres of potatoes in 1995 which is a 2 percent decrease from 1994. The average yield at 300 cwt. per acre decreased 20 cwt. per acre compared with last year.

The 15 major potato States held 252 million cwt of potatoes on December 1, 1995, including 2.05 million cwt of potatoes stored in areas of Michigan and Minnesota that were not counted last year. Comparable stocks (by subtracting 2.05 million cwt this year) are down 8 percent from a year earlier and 1 percent less than two years ago. Storage accounted for 64 percent of 1995 fall production compared with 66 percent in 1994. Stocks by type were 3 percent red, 20 percent white, and 77 percent russet, with more whites and fewer russets than a year ago.

Disappearance from the start of harvest to December 1 was a record high 140 million cwt, up 2 percent from the same period in 1994. Shrink and loss to date was estimated at 18.3 million cwt, down 1 percent from the 18.6 million cwt lost in 1994 but 5 percent above the 17.5 million cwt lost from the 1993 crop. Processing is heavy, with 71.0 million cwt taken by fryers and dehydrators in eight major States so far this season. This is a gain of 7 percent over a year ago and 16 percent above 1993.

Western States held 174 million cwt of potatoes in storage on December 1, 1995, off 11 percent from a year ago and 4 percent below 1993. Oregon dropped 21 percent and Washington was off 18 percent from a year ago, while Idaho's stocks were down 6 percent. These three States cover 86 percent of Western stocks with a combined drop of 11 percent from last year. Colorado's stocks were down 4 percent from a year ago and California's storage was down 10 percent.

Production of fall potatoes in 1995 is estimated at 402 million cwt, the second largest fall potato crop produced in the United States, after last year's record large crop. Comparable percent change (with the addition of summer crops from Michigan and Minnesota) places this crop 5 percent below 1994 but 3 percent above 1993. Area harvested, at 1.21 million acres, is down slightly from last year. The average yield is estimated at 334 cwt per acre, down 18 cwt from last year and 6 cwt below two years ago. Planting and harvest were late in most States resulting in smaller crops than last year.

Ten Western States produced 275 million cwt in 1995, down 8 percent from the last year and 1 percent below two years ago. Acreage for harvest at 716,100 acres, was down 3 percent, while the average yield of 384 cwt per acre dropped 21 cwt from a year ago. Idaho's production of 131 million cwt is the second largest on record, 5 percent below last year. Open fall weather allowed potatoes to put on extra weight in the latter part of the season. Production in Washington dropped 9 percent below the last two years as blight hurt yields in the southern Basin. Oregon's production slid 14 percent from last year but remained 3 percent above two years ago. Blight damage cut sharply into production potential of Idaho and Oregon's Treasure Valley. The late start and early frost reduced Colorado's potato crop 8 percent from their record high last year. Weather problems in California, Montana, Utah, Wyoming, and New Mexico contributed to smaller crops than a year ago. Nevada was the only Western State with a larger crop than a year ago.

1/ Stocks in 1995 included 2.05 million cwt from former summer area of MI and MN.

NOVEMBER EGG PRODUCTION DOWN 1 PERCENT

U.S. egg production totaled 6.21 billion during November 1995, down 1 percent from the 6.27 billion produced November 1994. Production included 5.28 billion table eggs and 933 million hatching egg type, of which 878 million were broiler-type and 55.0 million were egg-type. The total number of layers during November 1995 averaged 295 million, down 1 percent from the average number of layers during November 1994. November egg production per 100 layers was 2,107 eggs, compared with 2,113 in November 1994.

All layers in the U.S. on December 1, 1995, totaled 297 million, down slightly from a year ago. The 297 million layers consisted of 244 million layers producing table or commercial type eggs, 50.4 million layers producing broiler-type hatching eggs, and 2.51 million layers producing egg-type hatching eggs. Rate of lay per day on December 1, 1995, averaged 71.0 eggs per 100 layers, up slightly from the 70.7 eggs a year ago.

Laying flocks in the 30 major egg production States produced 5.87 billion eggs during November, down 1 percent from November 1994. The average number of layers during November, at 279 million, was also down 1 percent from the year earlier.

U.S. NOVEMBER MILK PRODUCTION UP SLIGHTLY

Milk production in the 22 major States during November totaled 10.6 billion pounds, slightly above the production in these same States in November 1994. October revised production, at 11.0 billion pounds was slightly more than the previous year. Production per cow in the 22 major States averaged 1,315 pounds for November, 3 pounds above a year ago.

The number of cows on farms in the 22 major States was 8.09 million head, 9,000 head less than both November 1994 and October 1995.

During the July-September period, the 22 major States produced 33.3 billion pounds of milk, 86.6 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 12.3 billion pounds for November 1995.

WHEAT STOCKS DOWN

Projected 1995/96 U.S. ending stocks of wheat are down 10 million bushels from last month, as lower food use only partially offsets a 15-million-bushel reduction in imports. The projected price range is up 5 cents on the low end but down 5 cents on the high end to $4.25 to $4.45 per bushel.

Global 1995/96 production, consumption, and ending stocks projections are down slightly from last month, largely because of a 2.5-million-ton reduction in Russia's wheat crop. However, production is higher for Canada because of an upward revision by Statistics Canada. Projected exports are up from last month for Canada and Eastern Europe, but lower for the EU-15. On the import side, larger expected imports by China and Russia more than offset reductions for the United States and a few other countries.

featuring... **RAVALLI COUNTY**

The entire western boundary and half of the southern boundary of Ravalli County comprise a part of the Montana-Idaho border. The county occupies 1,532,351 acres of land in western Montana. Much of this land is the Bitterroot National Forest. The Bitterroot River runs through the center of the county from its northern to its southern border, through what is known as the Bitterroot Valley. The Bitterroot mountain range, which is part of the Selway-Bitterroot Wilderness Area lies on the western border of the county. Hamilton is the county seat.

Hay is the major crop grown and ranked the county 12th in all hay production for the 1994 crop year. Some wheat, barley and oats are also grown. These crops brought the county rankings of 50th, 46th, and 23rd, respectively, in 1994 production.

Ravalli County was 33rd in the state for sheep numbers and 31st for all cattle and calves on January 1, 1995. Hog numbers on December 1, 1994 put the county in 35th place in the state. This area has an average annual precipitation of 13.27 inches. The high mountain ranges on either side of the Bitterroot Valley provide protection and afford the county a mild, constant climate.

Cash receipts from livestock and livestock products contributed $18,266,000 and a rank of 24th in 1993, while crops amounted to $3,754,000 and a rank of 39th among the counties. Government payments added $378,000 for a total cash receipt return of $22,398,000 and 36th place in 1993.

"Happy Holidays"

from all of us at the Montana Agricultural Statistics Service! As 1995 comes to a close, we should take a moment to reflect on what has happened this year. Farmers in Montana planted the smallest winter wheat acreage since 1951 and the largest spring wheat acreage since 1953. Spring moisture conditions were ideal, producing the second largest wheat crop on record. There must be some truth to the saying "RAIN MAKES GRAIN!" Nineteen ninety-five put Montana's grain producers in a win-win position with a good quality crop, high grain prices and an abundant crop. Grain producers have a great deal to be thankful for, while 1995 was challenging for the cattle industry as prices continued to go down.

Congress continues to work on the 1995 Farm Bill, which will help mold the future of American agriculture. No matter what happens with the Farm Bill, unbiased agricultural statistics will still be important in meeting new challenges and making informed decisions concerning agriculture's future.

To everyone involved in Montana's agriculture, thanks for your continued support. Because of the voluntary cooperation of Montana's farmers and ranchers we can provide sound statistical facts ensuring that basic agricultural information is available about Montana's number one industry.

We sincerely hope you and your family have a wonderful and safe holiday season and 1996 is a good year for Montana agriculture.

USDA TO CHANGE CATTLE ON FEED REPORTS

Beginning in January 1996, a monthly **Cattle on Feed** report covering feedlots with capacities of 1,000 or more head will replace the current 7- and 13-state reports. The new report will include estimates of on-feed inventories, placements, marketings, and other disappearance for 12 major States and a U.S. total each month. A breakout of steers, heifers, and cows and bulls on feed at the beginning of each quarter also will be published for the 12 major States and the U.S.

USDA will continue to publish the current 7-State (AZ, CA, CO, IA, KS, NC, TX) estimate series for feedlots with capacities of 1,000 or more head. This series was first introduced in 1992. The 12 States that will be reported individually on a monthly basis include the 7 States plus (ID, NM, OK, SD, WA). In addition, five states (IL, MI, MN, MT, WY) will be estimated and combined as other states in the U.S. total.

These changes should enhance the amount and frequency of data available to producers, analysts, and others interested in the cattle feeding business. Fewer feedlots will be surveyed each month, but the reports still will cover approximately 80 percent of the inventory on feed. A breakout of on-feed inventories for each State will continue to be reported each January 1.

USDA plans to continue reporting the proportion of cattle marketed by size of feedlot for each of the major States in the survey annually, and is exploring the possibility of including placement weight data in its monthly publication. Source: Cattle and Sheep Outlook, November 13, 1995

HOW THE FOOD DOLLAR IS SPENT

Food prepared away from home accounts for nearly half of the food expenditures by U.S. businesses, government, and individuals, with 53 percent spent on food prepared at home. While the away-from-home expenditure has continually increased since the 1990-91 recession, competition among food retailers and restaurants (full-service and fast-food) has helped to moderate price increases.

Total food expenditures rose 4.5 percent in 1994 over 1993 expenditures. Gains in food purchased away from home led the way, rising 5.9 percent to $301.3 billion, while spending for food at home rose 3.4 percent to $341.1 billion.

Food expenditures as a percentage of disposable personal income continue to fall each year, leaving income available for other purchases. In 1994, only 10.7 percent of a family's or individual's disposable income was spent on food, compared with 11.8 percent in 1990. Source: Agricultural Outlook, October 1995.

U.S. MEAT EXPORTS ON UPSWING

Exports now account for a larger share of U.S. red meat and poultry sales than was true just a few years ago. In 1996, the U.S. is projected to export about 9 percent (6.9 billion lbs.) of its total red meat and poultry production, up from 4 percent in 1990. Record supplies, low prices, and some easing in trade restrictions in certain markets are behind much of the growth. These expanding sales are preventing U.S. prices from dropping further in the face of record domestic supplies.

During the first half of 1995, the U.S. became a net exporter of pork, poultry exports continue to grow at a double-digit rate, and the beef trade deficit narrowed considerably. Exports of each of these commodities are projected to post a 50-year record in 1995 and 1996, although the rate of growth for 1996 would be smaller than this year. The U.S. is projected to continue as a net exporter of pork in both 1995 and 1996. Source: Agricultural Outlook, October 1995.

PRICES RECEIVED MOSTLY HIGHE

Montana crop prices for the full month of October were higher with the exception of durum wheat and alfalfa hay. Durum wheat fell 15 cents to $4.92 per bushel, but spring wheat jumped 39 cents to $4.37 per bushel. Winter wheat rose 38 cents to $4.63. All barley increased 30 cents to $2.88 per bushel and oats went up a nickel to $1.50 per bushel. Alfalfa hay prices remained at $66.00 per ton, but other hay prices rose $5.00 to $58.00 per ton. The all wheat price for mid-November averaged $4.61 per bushel, while the all barley price was $3.39.

Livestock prices for the full month of October were lower compared with the previous month, except for milk prices. Cow prices fell $3.00 to $32.40 per cwt. and steers and heifers dropped $1.20 to average $63.00 per cwt. Calf prices decreased 70 cents to $64.80 per cwt. The average sheep price dropped $3.10 to $23.30 per cwt. and lamb prices came in at $80.40, $3.60 below the previous month. Milk prices increased 60 cents to $13.55 per cwt. Steer and heifer prices for mid-November averaged $62.60 per cwt.

Nationally, steer and heifer prices averaged $62.30 cwt. for the full month of October. Cow prices came in at $32.40 and hogs were $45.60 per cwt. The U.S. all wheat price was $4.73 per bushel and $2.91 per bushel for all barley. Egg prices were 66.5 cents per dozen.

The U.S. All Farm Products Index of Prices Received in November was 105 based on 1990-92=100, up 1 point (1.0 percent) from October. Price gains from October for cattle, potatoes, corn, and soybeans more than offset price declines for hogs, lettuce, oranges, and lemons. The seasonal changes in the mix of commodities farmers sell also can affect the overall index level, but these changes were essentially offsetting in November. Higher relative seasonal marketings of cattle, milk, cotton, and cottonseed offset the effect of relatively lower seasonal marketings of potatoes, peanuts, soybeans, and sorghum.

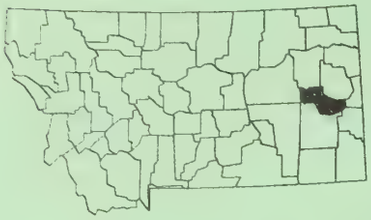
featuring... PRAIRIE COUNTY



Prairie County is divided in half by the Yellowstone River flowing from west to east through the county. The Powder River flows from the south to join the Yellowstone River in the southwest corner of the county. Prairie County's landscape is mainly rolling prairie--characteristic of most eastern Montana counties. The northwestern section is broken up by the Big Sheep Mountains that occupy that area. Prairie county covers 1,111,427 acres. Approximately 61.5 percent of the county consists of farm land.

Agricultural interests in the county include both livestock raising and crop production. In the January 1, 1995 all cattle & calves and breeding sheep & lambs inventories, Prairie County ranked 36th and 34th, respectively. Crops produced in the area include winter and spring wheat, oats, barley, and hay. Prairie County ranked 19th for winter wheat and 28th for other spring wheat production in 1994. Oats produced brought a ranking of 42nd, while barley and all hay production ranked 40th and 43rd, respectively. Corn and sugar beets are also grown in the county.

Livestock and livestock products brought $21,148,000 worth of cash receipts into the county in 1993, while crops cash receipts brought in $7,351,000. Government payments added $2,727,000, for a total of $24,871,000 in cash receipts for 1993.

MONTANA OCTOBER RED MEAT PRODUCTION DOWN, U.S. UNCHANGED

Montana slaughter plants produced [illegible] million pounds, dressed weight, of red meat during October 1995, down 3 percent from last year. During October, 1,900 head of cattle were slaughtered, 100 less than a year ago. The average live weight of 1,202 pounds was up 23 pounds from last year.

There were 2,400 hogs slaughtered during October, down 700 head from last year. Average live weight decreased 12 pounds to 234 pounds. The total number of sheep slaughtered during the month decreased 100 head from a year ago to 400 head. The average live weight decreased 3 pounds from the previous year to 113 pounds.

Commercial red meat production for the **United States** totaled 3.79 billion pounds during October. This production was virtually unchanged from last year. Beef production totaled 2.17 billion pounds, up 3 percent from the previous year. Head kill totaled 3.06 million, up 4 percent from a year earlier. The average l[illegible] weight at 1,190 pounds was down 10 p[illegible]nds from last year.

Veal production totaled 27.0 million pounds, up 5 percent from a year earlier. Calf slaughter totaled 128,700, up 11 percent from a year earlier. The average live weight was down 20 pounds to 361 pounds.

Pork production, at 1.57 billion pounds was down 4 percent from a year earlier. Hog kill totaled 8.54 million head, 3 percent below October 1994. The average live weight was down 3 pounds to 255 pounds.

Lamb and mutton production, at 23.0 million pounds, was down 4 percent from October 1994. Slaughter totaled 371,200 head, down 7 percent from a year earlier. The average live weight increased 4 pounds to 123 pounds.

January-October red meat production was 36.1 billion pounds up 3 percent from the comparable period a year ago. Accumulated beef production was up 3 percent, veal was up 10 percent, pork was up 2 percent, but lamb and mutton was down 7 percent.

CATTLE ON FEED UP 1 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 8.71 million head, up 1 percent from a year ago, but down 4 percent from November 1, 1993.

Placements in feedlots during October totaled 2.44 million, 2 percent below 1994 and 1993. Net placements of 2.38 million for October was down 2 percent from last year and 1 percent below 1993.

Marketings during October totaled 1.64 million, up 1 percent from 1994 and up 6 percent from 1993.

Other disappearance during October was 56,000 head, unchanged from 1994 and 26 percent below 1993.

Cattle on Feed in 1,000+ Capacity Feedlots Up 3 Percent

Cattle and calves on feed November 1, 1995 for the 7 States in the feedlots with 1,000 or more head capacity totaled 8.16 million head, up 3 percent from the previous year but slightly below 1993. The inventory in the 1,000+ capacity feedlots accounted for 94 percent of the total inventory.

MONTANA AND U.S. ANNUAL WAGE RATES UP

Montana farm workers earned an annual average of $5.65 per hour in 1995 compared with $5.44 per hour in 1994. All hired workers earned $5.66 per hour, up $.40 from a year ago, and field workers earned $5.50 per hour up $.44 per hour from last year. Together, field and livestock workers earned $5.54 per hour compared with $5.01 per hour in 1994.

Annual wage rates paid by U.S. farm operators during 1995 averaged $6.54 per hour. This compares to $6.39 during 1994 and $6.25 during 1993.

There were 3.39 million people working on the Nation's farms and ranches during the week of October 8-14, 1995. Self-employed farm operators accounted for 1.59 million of the total, along with 541,000 unpaid workers, and 957,000 workers hired directly by farm operators. Agricultural service employees on farms and ranches made up the remaining 302,000 workers.

Farm operators paid their hired workers an average wage of $6.58 per hour during the October 1995 survey week, up 12 cents from a year earlier. Workers paid on an hourly basis earned $6.20 per hour compared with $6.17 last October. Field workers received an average of $6.19 per hour, up 3 cents. Livestock workers earned $6.17 per hour compared with $5.82 a year earlier.

Self-employed farm operators worked an average of 39.6 hours, compared to 39.5 hours during the comparable week in 1994. Unpaid workers averaged 35.0 hours, compared to 34.8 hours last year. Hired employees worked 41.9 hours during the week, compared with 41.0 last year.

Benefits were provided for 419,000 hired workers. Farm operators provided housing for 138,000, meals for 57,000, bonuses for 102,000, health insurance for 194,000, transportation for 56,000, and other benefits for 194,000 hired workers.

U.S. OCTOBER EGG PRODUCTION DOWN 2 PERCENT

U.S. egg production totaled 6.24 billion during October 1995, down 2 percent from the 6.38 billion produced October 1994. Production included 5.28 billion table eggs and 959 million hatching egg type, of which 898 million were broiler-type and 61.0 million were egg-type. The total number of layers during October 1995 averaged 290 million, down 2 percent from the average number of layers during October 1994. October egg production per 100 layers was 2,148 eggs, compared with 2,160 in October 1994.

All layers in the U.S. on November 1, 1995, totaled 292 million, down 1 percent from a year ago. The 292 million layers consisted of 240 million layers producing table or commercial type eggs, 49.4 million layers producing broiler-type hatching eggs, and 2.64 million layers producing egg-type hatching eggs. Rate of lay per day on November 1, 1995, averaged 69.4 eggs per 100 layers, down 1 percent from the 70.0 eggs a year ago.

Laying flocks in the 30 major egg production States produced 5.90 billion eggs during October, down 2 percent from October 1994. The average number of layers during October, at 274 million, was also down 2 percent from the year earlier.

OCTOBER MILK PRODUCTION UP 1 PERCENT IN 22 MAJOR STATES

Milk production in the 22 major States during October totaled 11.0 billion pounds, 1 percent above production in these same States in October 1994. September revised production, at 10.8 billion pounds was 1 percent more than September 1994.

Production per cow in the 22 major States averaged 1,361 pounds for October, 7 pounds above October 1994. The number of cows on farms in the 22 major States was 8.11 million head, up 3,000 head from October 1994 but down 2,000 head from September 1995.

During the July-September period, the 22 major States produced 33.3 billion pounds of milk, 86.6 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 12.7 billion pounds for October 1995.

U. S. NOVEMBER 1 ALL SHEEP AND LAMBS INVENTORY DOWN

All sheep and lambs in the United States on November 1, 1995 totaled 8.9 million head, 18 percent below July 1, 1995. The number of breeding sheep and lambs on hand November 1, 1995 reached 6.2 million head, 4 percent below July 1, 1995. Market sheep and lambs (including newborns) at 2.7 million head were 39 percent below July 1, 1995.

Of the November 1 breeding herd, 5.1 million head were ewes one year old and older, 230,000 head were rams one year old and older, and 850,000 head were replacement lambs (including newborn lambs).

Of the total market lambs (including newborn lambs), 16.0 percent were under 65 pounds, 25.4 percent were 65 to 84 pounds, 36.3 percent were 85 to 105 pounds, and 22.2 percent were over 105 pounds on November 1.

The November 1 sheep and lamb numbers are also published by regions. Montana is included with Colorado, South Dakota, Utah, and Wyoming. This region accounted for 3.1 million head of sheep and lambs, or 34.4 percent of the U.S. total. This region accounted for 2.0 million breeding sheep and lambs which included 1.7 million ewes one year old and older, 60,000 rams one year old or older, and 280,000 replacement lambs.

All market lambs for the region on November 1, 1995 totaled 1.0 million head. Of the total market lambs, 4.0 percent were under 64 pounds, 19.4 percent were 65 to 84 pounds, 47.3 percent were 85 to 105 pounds, and the remaining 29.3 percent were over 105 pounds.

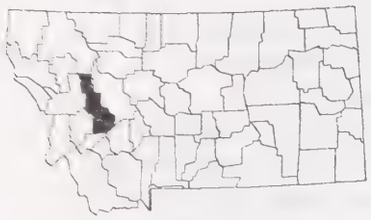
featuring... POWELL COUNTY



Created in January 1901, Powell County occupies approximately 1,488,619 acres of mostly mountainous terrain in western Montana. Parts of the Flathead, Lolo, Helena, and Deer Lodge National Forests provide beautiful scenery within the boundaries of the county. Powell County is traversed by sections of a number of rivers including the South Fork of the Flathead River, the Blackfoot, Little Blackfoot, and Clark Fork Rivers. Upsata Lake, Coopers Lake, Browns Lake, and Nevada Lake are also located in the county.

While not a large agricultural center because of the vast areas of forest land, the county's agricultural industry is diversified. A variety of crops are produced, including hay, for which the county ranked 14th in the 1994 crop production. Oats, with a rank of 14th, barley, ranking 16th, spring wheat, winter wheat and some potatoes are also grown in the county. Livestock interests include the raising of cattle, sheep and hogs. All cattle and calves ranked 27th for the January 1, 1995 inventory.

Cash receipts from the sale of livestock and livestock products brought in $13,789,000 in 1993, while crops contributed $2,077,000. Government payments in the county added $532,000 for a cash receipt total of $16,398,000 for Powell County in 1993.

U.S. AND MONTANA NOVEMBER 1 CROP PRODUCTION HIGHLIGHTS

Montana farmers harvested an estimated 1.22 million tons of sugar beets, down slightly from the October 1 forecast and down nearly 7 percent from last year. Estimated yield was set at 22 tons per acre compared with 24.2 tons per acre last year. Acreage harvested increase slightly from last year to 55,500 acres.

U.S. sugar beet production is expected to total 28.9 million tons, a decrease of 10 percent from 1994. Area for harvest, at 1.42 million acres, is virtually unchanged from the October "Crop Production" report and down 1 percent from last year. The average yield, at 20.3 tons per acre, is 1.9 tons below last year's yield. A cool, wet spring delayed planting and slowed sugar beet development. Unusually hot summer weather stressed plants and increased irrigation requirements. Early freezing temperatures in the Great Plains damaged leaves in some sugar beet fields. Favorable harvest weather over the Western and middle Great Plains States allowed the sugar beet harvest to advance ahead of normal. Despite some delays from early season snows in the central States, about 90 percent of the beets were lifted by early November. Harvest activity was delayed in the Great Lakes region and Northern Great Plains by precipitation. Warm weather in the Ohio Valley was unsuitable for sugar beet storage and slowed the start of the harvest. Dry weather and root aphid problems in Michigan lowered yield expectations.

Montana's estimated fall potato production is 8 percent less than a year ago at 2.9 million hundredweight. A cool wet spring delayed plantings compared to normal. There were some reports of slight frost damage with the late harvest. Average yield is estimated at 300 hundred weight per acre, down 20 hundred weight from 1994. Acreage for harvest is estimated at 9,800 acres.

U.S. production of fall potatoes for 1995 is forecast at 402 million cwt, the second largest fall potato crop produced in the United States after last year's record large crop. Comparable percent change (with the addition of the former summer crops from Michigan and Minnesota) places this crop 5 percent below 1994 but 3 percent above 1993. Area harvested, at 1.21 million acres, is down slightly from last year. The average yield is projected at 334 cwt per acre, down 20 cwt from last year but 7 cwt above two years ago. Planting and harvest were late in most States resulting in smaller crops than last year. Total potato production from all four seasons was 445 million cwt in 1995, down 5 percent from last year but 4 percent above 1993.

U.S. corn production is forecast at 7.37 billion bushels, down 2 percent from the October 1 forecast and 27 percent below the record high 1994 crop. Based on conditions as of November 1, yields are expected to average 113.7 bushels per acre, down 2.9 bushels from last month and 24.9 bushels below the record high yield of 1994. Planted acreage is revised to 71.4 million acres, up 100,000 acres from the previous estimate. Acreage for harvest as grain is estimated at 64.8 million acres, up 150,000 acres from the October estimate.

PASTURE AND RANGE FEED CONDITION, NOVEMBER 1, 1995

Montana's pasture and range feed condition moved up slightly from a month ago. The percentage in the good to excellent range increased from 69% to 72%. The Northeast, while still good, had the lowest condition rating in the state. The Northwest, Southeast, and the South Central regions of the state showed the best ratings. As of November 1 the statewide pasture and range feed condition was rated 7% poor, 21% fair, 64% good, and 8% excellent. Farmers and ranchers had moved 83% of their cattle and calves and 88% of their sheep and lambs off summer ranges by November 1.

Reporters of range and pasture feed condition are asked to rate the percentage of the pastures that fall into each of the following categories:

- Very poor - pastures and/or ranges are providing very little or no feed for the current time of the year. Supplemental feeding is required to maintain livestock.
- Poor - pastures and/or ranges are providing marginal feed for the current time of the year. Some supplemental feeding is required.
- Fair - pastures and/or ranges are providing adequate feed, but less than the normal amount expected for the current time of the year.
- Good - pastures and/or ranges are providing the normal amount of feed for the current time of the year.
- Excellent - pastures and/or ranges are providing feed in excess of what is normally expected for the current time of the year.

THE 1995 CROP YEAR SUMMARY SHOWS ABNORMAL YEAR

The 1995 crop year, starting with last fall's winter wheat planting, was quite abnormal. Last fall droughty conditions held back many farmers from seeding their winter wheat. By the time some moisture was received, it was too late to plant. In the end, farmers planted the smallest winter wheat acreage since 1951. The smaller winter wheat acreage led to the largest spring wheat acreage planted since 1953 when spring wheat estimates included durum.

Limited snowfall during the winter kept drought concerns alive. Finally in March and April, spring snow storms brought some much needed moisture to most of the state. Wild temperature fluctuations during the spring caused some concern of damage to the winter wheat crop.

The spring was characterized by cool, wet weather. By the end of April, farmers had planted just slightly more than 40% of the spring grains, nearly 10 points behind the 5-year average. Winter wheat condition was rated 52% fair, 37% good, and 5% excellent. Most of the state rated soil moisture conditions as mostly adequate to surplus.

The cool, wet weather continued through the month of May. Planting of the spring grains was still nearly 10 points behind normal. By month's end 85% of the spring grains had been planted. Many producers ended up reseeding their winter wheat crop due to the less than ideal planting conditions which contributed to poor stands and high weed populations.

June continued mostly cool through the month and kept crop progress behind normal. The northeast district did have a week of very hot weather and there was some concern of heat stress to the crops in that area. Although crop progress was behind normal, most farmers thought the crop looked very good. The conditions of the spring grains were rated mostly good to excellent. Winter wheat condition remained mostly fair to good.

Scattered storms during the first part of July kept hay harvest well behind normal. There was also quite a bit of hay that was damaged because it was left in the wind row too long. The conditions of the small grains continued to look very good. All crops were rated mostly good to excellent. Winter wheat harvest started in the eastern part of the state by the end of the month. Warm weather in the later part of the month helped the turning of crops.

Harvesting went into full swing during August. By the end of the month 80% of the winter wheat had been harvested and nearly 40% of the spring grains were harvested. Harvesting was behind the five-year average. There were a wide variety of maturity stages across the state due to late planting and a cool growing season.

Winter wheat harvest was nearly done by the second week in September. Spring grain harvest was slightly more than 90% complete by the end of the month. The season's first, wide-spread, hard frost occurred during the third week. There was some crop damage in the North Central district where there were some very late crops. Winter wheat seeding was 65% complete by the end of the month with 11% of the acreage emerged.

October was marked with scattered showers and snow showers across the state. Temperatures were generally below normal throughout the month. Winter wheat seeding wrapped up at month's end with 85% of the acreage emerged. Row crop harvest was nearly finished by the end of the month.

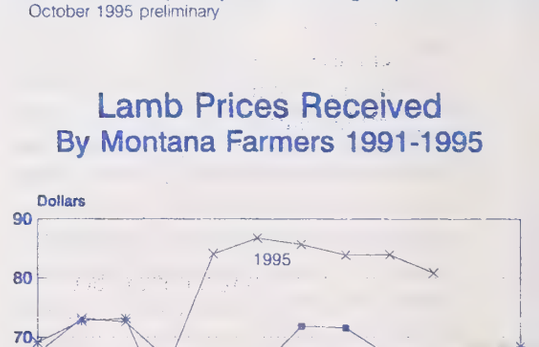
Lamb Prices Received By Montana Farmers 1991-1995



October 1995 preliminary

PRICES RECEIVED MIXED

Montana crop prices for the full month of September were mixed. Durum wheat decreased 33 cents to $5.07 per bushel. Winter wheat increased 5 cents to $4.25 per bushel, while spring wheat rose 9 cents to $4.14. Feed barley increased 11 cents to $2.21 per bushel, and malt barley fell 7 cents to $2.95 per bushel. Alfalfa hay prices, at $66.00 per ton, fell $2.00 from August, while other hay prices, at $53.00 per ton, dropped $5.00. The all wheat price for mid-October averaged $4.54 per bushel, while the all barley price was $2.92.

Livestock prices for the full month of September were lower compared with the previous month, except for calves and lambs. Cow prices were down $2.60 to $35.40 per cwt, while the average price for steers and heifers slipped 20 cents to $64.20 per cwt. Calf prices rose 50 cents to $65.50 per cwt. Prices received for sheep averaged $2.50 below last month at $26.40, while lamb prices climbed 10 cents to $84.00 per cwt. Milk prices decreased 15 cents to $12.95 per cwt. Steer and heifer prices for mid-October averaged $63.70 per cwt.

Nationally, steer and heifer prices averaged $62.00 per cwt for the full month of September. Cow prices came in at $34.10 and hogs were $48.30 per cwt. The U.S. all wheat price was $4.52 per bushel and $2.57 per bushel for all barley. Egg prices were 66.6 cents per dozen.

The All Farm Products Index of Prices Received in October was 105 based on 1990-92=100, up 1 point (1.0 percent) from September. Price gains from September for corn, milk, wheat, and soybeans more than offset price declines for lettuce, broilers, hogs, and peanuts. The seasonal changes in the mix of commodities farmers sell also can affect the overall index level, but these changes were essentially offsetting in October. Higher relative seasonal marketings of soybeans, corn, cotton, and sorghum offset the effect of relatively lower seasonal marketings of wheat, milk, tobacco, and hogs.

Compared with October 1994, the All Farm Products Index was 10 points (11 percent) higher. Higher prices for corn, soybeans, hogs, and wheat compared with October 1994 levels more than offset lower prices for cattle, lettuce, calves, and dry beans.

featuring... POWDER RIVER COUNTY

Powder River County is situated in the extreme southeastern part of Montana, with the county's southern boundary making up part of the Montana-Wyoming border. The northern and eastern districts of the county are largely composed of rolling prairie. The Powder and Little Powder Rivers traverse the eastern half of the county from north to south. A good portion of the western half of the county is occupied by a section of the Custer National Forest. Broadus is the county seat. The average annual precipitation is 13.71 inches, and the county has an average of 118 frost free days.

Livestock raising is the primary agricultural industry in the county. The January 1, 1995 cattle and sheep inventories put the county 11th place for all cattle and calves and 3rd place for breeding sheep inventory.

Principle crops grown in Powder River County are winter wheat, other spring wheat, oats, and alfalfa hay. The county ranked 23rd for the production of winter wheat, 36th for spring wheat production, 31st for oat production and 30th for all hay production. Alfalfa hay comprised most of the hay production with 57,000 tons of the total 66,100 tons of all hay produced.

Livestock and livestock products contributed $21,148,000 which gave it a rank of 17th for the state. Crops earned a rank of 40 and contributed $3,158,000, and Government Payments added $2,575,000 for total cash receipts of $26,881,000 for 1993.

SEPTEMBER RED MEAT PRODUCTION DROPS

Montana slaughter plants produced 1.42 million pounds, dressed weight, of red meat during September 1995, down 18 percent from last year. During September, 1,500 head of cattle were slaughtered, 300 head less than September 1994. The average live weight of 1,197 pounds was 3 pounds heavier than a year ago.

There were 2,400 hogs slaughtered in September, down 500 head from a year earlier. Average live weight decreased 15 pounds to 227 pounds. The number of sheep slaughtered was 500 head, down 100 head from last year. The average live weight decreased 5 pounds to 111 pounds.

U.S. Commercial red meat production totaled 3.70 billion pounds during September, 1 percent below last year. Beef production totaled 2.21 billion pounds, up 4 percent from the previous year. Head kill totaled 3.08 million, up 5 percent from a year earlier. The average live weight at 1,193 pounds was down 12 pounds from last year. Veal production totaled 26.0 million pounds, up 9 percent from a year earlier. Calf slaughter totaled 122,300, up 12 percent from a year earlier. The average live weight was down 11 pounds to 362 pounds.

Pork production, at 1.44 billion pounds was down 7 percent from a year earlier. Hog kill totaled 7.92 million head, 5 percent below September 1994. The average live weight was down 3 pounds to 251 pounds. Lamb and mutton production, at 21.0 million pounds, was down 9 percent from the record low set in September 1979. Slaughter totaled 359,500 head, down 10 percent from a year earlier. The average live weight remained the same at 119 pounds.

January-September red meat production was 32.4 billion pounds up 3 percent from the comparable period a year ago. Accumulated beef production was up 3 percent, veal was up 10 percent, pork was up 3 percent, but lamb and mutton was down 7 percent.

CATTLE ON FEED UP 2 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed for slaughter market in the 13 States preparing quarterly estimates totaled 9.40 million head, up 2 percent from a year ago but down 3 percent from October 1, 1993. The inventory included 6.14 million steers and steer calves, down slightly from a year ago and 2 percent below two years ago. This group accounts for 65 percent of the total inventory. Heifers and heifer calves accounted for 3.21 million head, 5 percent above a year ago.

Placements of cattle and calves on feed in the 13 States during the July-September 1995 quarter totaled 6.23 million, down 1 percent from last year and 2 percent below July-September 1993. Net placements of 6.04 million for July-September were 1 percent below last year and slightly below July-September 1993.

Marketings of fed cattle during the July-September 1995 quarter totaled 6.20 million, up 3 percent from the same quarter last year and 5 percent above two years ago.

Other disappearance totaled 192,000 head compared with 191,000 in July-September 1994 and 275,000 in July-September 1993.

CATTLE ON FEED, PLACEMENTS, MARKETINGS

NATION'S SEPTEMBER EGG PRODUCTION DOWN 2 PERCENT

U.S. egg production totaled 5.98 billion during September 1995, down 2 percent from the 6.13 billion produced September 1994. Production included 5.05 billion table eggs and 927 million hatching egg type, of which 867 million were broiler-type and 60.0 million were egg-type. The total number of layers during September 1995 averaged 288 million, down 2 percent from the average number of layers during September 1994. September egg production per 100 layers was 2,075 eggs, compared with 2,088 in September 1994.

All layers in the U.S. on October 1, 1995, totaled 289 million, down 2 percent from a year ago. The 289 million layers consisted of 237 million layers producing table or commercial type eggs, 49.3 million layers producing broiler-type hatching eggs, and 2.73 million layers producing egg-type hatching eggs. Rate of lay per day on October 1, 1995, averaged 69.1 eggs per 100 layers, down slightly from the 69.2 eggs a year ago.

Laying flocks in the 30 major egg production States produced 5.66 billion eggs during September, down 2 percent from September 1994. The average number of layers during September, at 272 million, was also down 2 percent from the year earlier.

OCTOBER 1, MILK PRODUCTION UP 4 PERCENT FROM LAST YEAR

Montana milk production was 82 million pounds for the July-September quarter of 1995, 1 million pounds less than the previous quarter, but 3 million pounds more than last year. The average number of milk cows on hand was 21,000 head, the same as last year and last quarter.

An average of 16.2 pounds of grain and other concentrates were fed per cow by Montana dairymen on October 1, down from 17.3 pounds a year ago. The value of grain and concentrates fed was $7.25 per hundred weight, down 5 cents from last year.

U.S. milk production in the 22 major States during September totaled 10.8 billion pounds, 1 percent above production in these same States in September 1994. August revised production, at 11.1 billion pounds, was slightly more than August 1994. Production per cow in the 22 major States averaged 1,331 pounds for September, 13 pounds above September 1994. The number of cows on farms in the 22 major States was 8.11 million head, up 4,000 head from both September 1994 and August 1995.

During the July-September period, the 22 major States produced 33.3 billion pounds of milk, 86.6 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 13.2 billion pounds for July, 12.8 billion pounds for August, and 12.5 billion pounds for September.

The quarterly U.S. milk production was 38.5 billion, 1 percent above the July-September period last year. The average number of milk cows in the U.S. during the July-September quarter was 9.52 million head, 19,000 head less than the same period last year.

Grain and other concentrates fed to milk cows on October 1, 1995, averaged 18.4 pounds per cow, 0.3 pound less than October 1, 1994. The value of grain and other concentrates fed to cows on October 1, averaged $7.97 per hundredweight, $0.10 more than October 1, 1994.

MONTANA'S 1994 POTATO PRODUCTION UP 19 PERCENT; U.S. PRODUCTION AT RECORD HIGH

Montana's 1994 potato production totaled 3.2 million cwt., 19 percent above last year and 30 percent above 1992. Montana farmers harvested 10,000 acres, up 100 acres from the previous year, and up 150 acres from two years ago. Potato yields averaged a record 320 cwt. per acre in 1994, compared with 300 cwt. in 1993 and 290 cwt. in 1992.

Value of production from the 1994 crop amounted to 22.1 million dollars, down 9 percent from 1993. The average price was $6.90 per cwt., down $2.05 from the previous year's crop. Sales of Montana's 1994 potato crop totaled 19.8 million dollars, an 8 percent decrease from 1993. Producers sold 2.9 million cwt. from the 1994 crop compared with 2.4 million cwt. last year.

Total 1994 potato production for the U.S. was estimated at a record high 468 million cwt., 9 percent above a year earlier and 10 percent above 1992. Harvested area, at 1.38 million acres, was up 5 percent from the last two years. The average yield hit a record high 338 cwt. per acre, up 12 cwt. from a year ago and 15 cwt. above 1992. These are the fourth consecutive record highs for yield and production.

Value of production was estimated at $2.60 billion from the 1994 crop, down 2 percent from a year earlier but 11 percent above 1992. The average price was $5.58 per cwt. compared with $6.17 from the 1993 potato crop.

Sales from the 1994 U.S. potato crop totaled 425 million cwt., up 8 percent from 1993 and 10 percent above 1992. Non-sales accounted for 43.2 million cwt. of 1994 potatoes, up 20 percent from the previous year and 9 percent more than 1992. Typically, 91 percent of potatoes produced are sold (based on the past 5-year average). The other 9 percent are either lost (shrinkage and loss) or used for seed, home use and livestock feed on farms where grown. In the 1994 season, farmers sold 90.8 percent of their crop and kept or lost 9.2 percent. Shrinkage and loss were the second highest on record (after 1985), estimated at 37.2 million cwt., 24 percent above 1993 and 10 percent above 1992. Livestock feed and home use totaled 1.21 million cwt., up 8 percent. Growers kept 4.74 million cwt. for seed on their own farms, down 1 percent from the previous year.

U.S. processors used a record high 261 million cwt. of potatoes, up 8 percent from 1993 and 14 percent above the 1992 crop usage. Table stock totaled 135 million cwt., up 9 percent from last year, while other sales (seed and livestock feed) of 28.7 million cwt. were up 7 percent. Chip potato use totaled 49.5 million cwt., up 1 percent from a year earlier. Freezing potatoes totaled a record high 163 million cwt., a jump of 11 percent; while dehydrating claimed a record high 41.4 million cwt., a gain of 1 percent. Canning use totaled 5.39 million cwt., up 24 percent. Starch, flour and other products were made from 2.2 million cwt. of potatoes, a gain of 29 percent.

SUGAR BEET PRODUCTION DOWN SLIGHTLY; HAY PRODUCTION UP

Montana farmers intend to harvest 1.28 million tons of **sugar beets**. The October 1 forecast was 2% below last month and the 1994 production level. The forecasted yield was 23 tons per acre, down .5 tons from last month and down 1.2 tons from last year. Acreage for harvest is estimated at 55,500 acres, 1,500 acres more than 1994. Sugar beet harvest got off to a good start and was 18% harvested by October 8.

U.S. sugar beet production, of 28.8 million tons, was down slightly from September 1 and down 10% from 1994. U.S. yields are estimated at 20.2 tons per acre, down fractionally from the September forecast and off 2 tons compared with last year. Farmers intend to harvest 1.43 million acres, 1% less than 1994.

Montana's all hay production was estimated at record 5.49 million tons, unchanged from the August 1 forecast and up 21% from last year. Average yield for all hay was 2.19 tons per acre, up from last year's 2.06 tons per acre. Harvested acreage was estimated at 2.5 million acres, up 300,000 acres from 1994. Farmers intend to harvest 1.65 million acres of alfalfa hay with an average yield of 2.5 tons per acre. Other hay harvested acreage, of 850,000 acres, yielded 1.6 tons per acre.

U.S. all hay production was estimated at 157.0 million tons, up 5% from last year. Average yield is set at 2.61 tons per acre on 60.2 million acres. Alfalfa production is set at 85.9 million tons, while other hay production is set at 71.1 million tons. Average yields are estimated at 3.49 tons per acre for alfalfa and 1.99 million tons for other hay.

PASTURE AND RANGE FEED CONDITION, OCTOBER 1, 1995

Montana's pasture and range feed condition fell from last month. While most of the condition remains good to excellent, there was a 14 point shift from excellent to good. As of October 1, the condition was rated 1% very poor, 5% poor, 25% fair, 58% good, and 11% excellent. The northeast district continues to have to lowest rating. All other districts have mostly good to excellent ratings. Farmers and ranchers are moving their livestock off summer ranges, 38% of the cattle and calves and 35% of the sheep and lambs have been moved as of October 8.

PLEASE RETURN

SMALL GRAIN SUMMARY HIGHLIGHTS.

Montana's 1995 all wheat crop is the second largest on record at 193.7 million bushels. Winter wheat production is set at 58.0 million bushels, 10% less than 1994 and the smallest crop since 1989, due mainly to the reduced acreage planted to winter wheat. Yields averaged 40 bushels per acre, which ties the second highest yield on record. This year's spring wheat crop is the largest ever with an estimated production of 127.8 million bushels. Harvested spring wheat acreage is the largest since 1953 when spring wheat and durum wheat were estimated together as all spring wheat. Yields averaged 35 bushels per acre, the second highest yield on record. Durum wheat production was estimated at 7.95 million, up 49% percent from 1994. Barley producers harvested a 62.4 million bushel crop, up 18 percent from last year. Barley yields also tied the second highest yield on record at 52 bushels per acre.

U.S. all wheat production totaled 2.18 billion bushels, down 6 percent from 1994. U.S. barley production was estimated at 361.0 million bushels, 4 percent below last year.

PRICES RECEIVED MIXED

Montana crop prices were up for the full month of August compared with a month ago with the exception of hay, oats and feed barley. Winter and durum wheat both went up 17 cents a bushel, with winter wheat averaging $4.20 and durum wheat at $5.40. Spring wheat increased 15 cents to $4.05 a bushel. The all barley price rose 61 cents to $2.90 per bushel. Alfalfa hay remained at $68.00 per ton while other hay dropped $3.00 to $58.00 per ton. Oats were down 14 cents to $1.36 per bushel. The all wheat price for mid-September averaged $4.39, while the all barley price was $2.51.

Livestock prices for the full month of August were lower compared with the previous month except for steers and heifers. Steers and heifers showed a $2.00 increase to $64.40 per cwt. Cow prices dropped $1.60 to $38.00 per cwt and calves decreased 30 cents to $65.00 per cwt. Prices received for sheep were 80 cents below last month at $28.90 and lamb prices slipped $1.80 to $83.90 per cwt. Milk prices increased 70 cents to $13.10 per cwt. Steer and heifer prices for mid-September averaged $64.00 per cwt.

Nationally, steer and heifer prices averaged $61.70 per cwt for the full month of August. Cow prices were $36.10 and hogs came in at $48.60 per cwt. The U.S. all wheat price was $4.25 per bushel and $2.63 per bushel for all barley. Egg prices were 64 cents per dozen.

The All Farm Products Index of Prices Received in September was 105 based on 1990-92=100, up 3 points (2.9 percent) from August. Price gains from August for lettuce, wheat, corn, and milk more than offset declines for grapes, potatoes, cattle, and strawberries. The seasonal changes in the mix of commodities farmers sell can also affect the overall index level. However, lower relative seasonal marketings of cattle, wheat, broilers, and grapes offset the effect of relatively higher seasonal marketings of peanuts, soybeans, corn, and cotton.

Compared with September 1994, the All Farm Products Index was up 8 points (8.2 percent). Higher prices in September relative to a year earlier for hogs, corn, lettuce, and wheat more than offset lower prices for cattle, calves, and lemons.

CATTLE ON FEED DOWN SLIGHTLY IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 7.45 million head, down slightly from a year ago and down 4 percent from September 1, 1993.

Placements in feedlots during August totaled 1.69 million, 9 percent below both 1994 and 1993. Net placements of 1.64 million for August were down 8 percent from both 1994 and 1993.

Marketings during August totaled 1.88 million, up 7 percent from 1994 and up 11 percent from 1993. This is the largest August marketings since the current 7-State data series began in 1972.

Other disappearance during August was 50,000 head, 11 percent below last year and 39 percent below 1993.

AUGUST RED MEAT PRODUCTION DOWN FROM 1994

Montana slaughter plants produced 1.86 million pounds, dressed weight, of red meat during August 1995, down 15 percent from last year. During August 2,000 head of cattle were slaughtered, 400 head less than August 1994. The average live weight of 1,184 pounds was 6 pounds lighter than a year ago.

There were 3,100 hogs slaughtered in August, down 300 head from a year earlier. Average live weight decreased 12 pounds to 224 pounds. The number of sheep slaughtered was 600 head, down 200 head from last year. The average live weight decreased 1 pound to 115 pounds.

U.S. commercial red meat production totaled a record high 3.86 billion pounds during August. This production was 3 percent above the previous record high set in August 1994.

Beef production totaled 2.31 billion pounds, up 3 percent from previous record high set in August 1976. Head kill totaled 3.22 million, up 5 percent from a year earlier. The average live weight at 1,189 pounds was down 15 pounds from last year.

Pork production, at 1.50 billion pounds was up 1 percent from the previous record high set in August 1994. Hog kill totaled 8.26 million head, 1 percent above August 1994. The average live weight remained the same at 252 pounds.

Lamb and mutton production, at 23.0 million pounds, was down 4 percent from a year earlier. Slaughter totaled 371,700 head, down 7 percent from a year earlier. The average live weight increased 3 pounds to 123 pounds.

January-August red meat production was 28.7 billion pounds up 4 percent from the comparable period a year ago. Accumulated beef production was up 3 percent, veal was up 11 percent, pork was up 4 percent, but lamb and mutton was down 7 percent.

SEPTEMBER 1 GRAIN STOCKS

Montana wheat stocks on September 1, 1995 amounted to 194.5 million bushels, 3 percent less than last year's inventory. This year's September inventory is 11 percent above the 10-year average.

Winter wheat stocks, at 49.8 million bushels, were 37 percent below last year, but **all spring wheat** stocks, at 144.7 million, were up 20 percent. **All wheat** stocks on farms, at 170 million bushels, were unchanged from last year and off-farm stocks, at 24.5 million bushels, were down 20 percent. All wheat disappearance in the June through August quarter was 57 percent more than the 10-year average.

Barley stocks, in all locations on September 1, amounted to 52.7 million bushels, up slightly from last September. On-farm barley stocks were up 4 percent from last year. Off-farm inventory was down 24 percent. **Oat** stocks, at 4.56 million bushels, were up 28 percent from last year. On-farm oat stocks were up 32 percent from last year, while off-farm stocks were 65 percent below last year.

Nationally, all wheat in storage on September 1, 1995 was estimated at 1.88 billion bushels, down 9 percent from last September 1. Farm stocks were 744 million bushels; off-farm stocks, 1.14 billion. The farm level was down 14 percent from last year, and the off-farm, down 6 percent. The first quarter disappearance of the 1995-96 marketing year totals 809 million bushels, down 1 percent from the first quarter the previous year.

U.S. **durum wheat** stocks on September 1, 1995 were estimated at 97.2 million bushels, up 5 percent from last September. Farm stocks totaled 72.6 million bushels, 3 percent less than September 1994. The first quarter disappearance from all positions was 31.1 million bushels, down 4 percent from 1994.

U.S. **barley** stocks in all positions on September 1, 1995, were estimated at 312 million bushels, 11 percent below the stocks of September 1, 1994. Of the total barley stocks on hand, 199 million bushels were stored on farms, 10 percent below a year earlier. Off-farm stocks, at 113 million bushels, were 14 percent below last year.

U.S. **corn** stored in all positions on September 1, 1995, was estimated at 1.56 billion bushels, up 83 percent from September 1, 1994. Of the total stocks, 741 million bushels were stored on farms, 87 percent above last year. Off-farm stocks, at 817 million bushels, were up 80 percent from a year earlier.

U.S. **oats** stored in all positions on September 1, 1995, was estimated at 180 million bushels, down 18 percent from a year earlier. Of the total stocks on hand, 107 million bushels were stored on farms, 26 percent below last year. Off-farm stocks totaled 72.9 million bushels, 4 percent below last year.

SMALL GRAIN SUMMARY

Montana's 1995 all wheat crop is the second largest wheat crop on record at 193.7 million bushels. This year's crop is 14 percent more than last year and second only to 1993's 206.3 million bushel crop. **Winter wheat** production is set at 58.0 million bushels, 10 percent less than 1994 and the smallest crop since 1989. Last fall's dry weather substantially reduced winter wheat plantings and this spring farmers plowed up poor, thin, winter wheat stands in many areas. There were 1.45 million acres harvested this year with an average yield of 40 bushels per acre which ties the second highest yield in history. This year's **spring wheat** crop is the largest ever with an estimated production of 127.8 million bushels. This year's large increase in acreage was the biggest factor in the large production estimate. Harvested spring wheat acreage, at 3.65 million acres, was the largest spring wheat acreage harvested since 1953 when spring wheat and durum wheat were combined into all spring wheat. An average yield for this year's crop is set at 35 bushels per acre, the second highest yield on record. **Durum wheat** production is estimated at 7.95 million bushels, up 49 percent from 1994. A strong price this year led farmers to harvest 265,000 acres. The northeast, where most of the durum is grown, suffered more than previously thought from some hot spells. The durum crop looked great, but did not fill as expected. This year's average yield is 30 bushels per acre, the same as last year.

It was also a good year for **barley** producers who harvested a 62.4 million bushel crop. This is 18 percent more than last year with an average yield of 52 bushels per acre, which ties the second highest yield on record. Farmers harvested 1.2 million acres, unchanged from last year. **Oats** production is set at 4.72 million bushels, up 31 percent from last year. There were 80,000 acres harvested with an average yield of 59 bushels per acre, also the second highest yield on record.

U.S. all wheat production for 1995 totaled 2.18 billion bushels, slightly below the September 1 forecast, but down 6 percent from 1994. Area for grain was estimated at 60.9 million acres, fractionally less than the September 1 forecast and off 1 percent from last year. The U.S. all wheat yield of 35.9 bushels per acre, is 1.7 bushels per acre lower than last year and the lowest average since 1991.

The 1995 U.S. winter wheat production was estimated at 1.55 billion bushels, marginally less than the August forecast and 7 percent lower than 1994. Yield averaged 37.8 bushels per acre, 0.2 bushels better than August, but 2.4 bushels per acre below the 1994 average. Harvested area was estimated at 41.1 million acres, down 1 percent from both the last forecast and last year. Other spring wheat production was estimated at 531 million bushels, up minutely from the September forecast, but down 6 percent from 1994. Harvested area is up 1 percent from September 1. The U.S. yield was set at 32.2 bushels per acre, down 0.2 bushels from September 1, but up 0.4 bushels from a year ago. The 1995 durum production was estimated at 102 million bushels, down 3 percent from the last forecast, but 6 percent higher than 1994. Acres for grain totaled 3.35 million acres, up 3 percent from September 1 and up 24 percent from last year. The yield estimate is 1.8 bushels per acre less than the final forecast and down 5.1 bushels from last year.

Oat production in 1995 was estimated at 163 million bushels, 29 percent below last year's crop--the lowest oat production since estimates were first made in 1866. Yields per harvested acre for grain averaged 55.2 bushels, down 1.9 bushels from 1994. Barley production in 1995 was estimated at 361 million bushels, 4 percent below last year's estimate and the lowest since the drought reduced crop of 1988. Average yield per acre, at 57.6 bushels, was up 1.4 bushels from 1994.

AUGUST MILK PRODUCTION UP SLIGHTLY

August milk production in the 22 major States totaled 11.1 billion pounds, slightly above production in these same States in August 1994. July revised production, at 11.4 billion pounds was 1 percent more than July 1994.

Production per cow in the 22 major States averaged 1,373 pounds for August 4 pounds above August 1994. The number of cows on farms in the 22 major States was 8.11 million head, unchanged from August 1994 but 2,000 head more than July 1995.

During the April-June period, the 22 major States produced 34.9 billion pounds of milk, 86.1 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 12.9 billion pounds for August 1995.

The Montana grain stocks, production estimates and U.S. hogs and pigs estimates in this issue are the results of surveying approximately 1,800 Montana farmers and ranchers during September. Names were selected on a statistical probability basis. SPECIAL THANKS to those operators that were interviewed and responded to this survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

AUGUST U.S. EGG PRODUCTION DOWN 2 PERCENT

U.S. egg production totaled 6.13 billion during August 1995, down 2 percent from the 6.27 billion produced August 1994. Production included 5.18 billion table eggs and 955 million hatching egg type, of which 891 million were broiler-type and 64.0 million were egg-type. The total number of layers during August 1995 averaged 286 million, down 2 percent from the average number a year earlier. August egg production per 100 layers was 2,145 eggs, compared with 2,160 in August 1994.

All layers in the U.S. on September 1, 1995, totaled 287 million, down 2 percent from a year ago. The 287 million layers consisted of 236 million layers producing table or commercial type eggs, 49.2 million layers producing broiler-type hatching eggs, and 2.72 million layers producing egg-type hatching eggs. Rate of lay per day on September 1, 1995, averaged 69.2 eggs per 100 layers, down 1 percent from the 69.8 eggs a year ago.

Laying flocks in the 30 major egg production States produced 5.80 billion eggs during August, down 2 percent from August 1994. The average number of layers during August, at 270 million, was also down 2 percent from the year earlier.

U.S. SEPTEMBER 1 HOG INVENTORY DOWN

U.S. inventory of all hogs and pigs on September 1, 1995, was estimated at 61.1 million head, 2 percent below last year but 3 percent above September 1, 1993.

Breeding inventory, at 7.07 million head, was 5 percent below last year and 1 percent below two years ago. Market hog inventory at 54.0 million head, was 2 percent below a year ago but 4 percent above September 1, 1993.

The June-August 1995 U.S. pig crop was 25.0 million head, 2 percent less than last year but 4 percent above the same period in 1993. Sows farrowing during June-August 1995 totaled 3 million, down 3 percent from last year but 1 percent above the same period in 1993. Pigs saved per litter were a record high for the quarter at 8.32 compared to 8.22 during the same period in 1994. Pigs saved per litter, during June-August 1995, by size of operation ranged from 7.20 for those operations with 1-99 head to 8.80 pigs per litter for operations with 2,000 head or more.

U.S. hog producers intend to have 3 million sows farrow during the September-November period. This is slightly above the actual farrowings during the same period in 1994 and 1 percent above 1993. Farrowings for December 1995-February 1996 are expected to be up slightly from last year and 3 percent above two years ago. If realized, this would be the highest December-February sows farrowed since 1980.

SEPTEMBER 1 CROP PRODUCTION FORECAST NEARLY UNCHANGED

Estimated spring wheat production remains at 129.6 million bushels. This is the largest spring wheat crop on record, due to the second highest yield and the large number of acres harvested. The forecasted yield of 36 bushels per acre is 6 bushels larger than last year and only 1 bushel below 1993's record yield. Harvesting of the crop remains behind normal due to the late spring. As of September 9, only 65 percent of the spring wheat crop has been harvested.

The estimated durum wheat yield fell 1 bushel from last month to 31 bushels per acre. There were a few hot spells in the northeast that caused more damage than previously thought. Although the stand looked good, the heads did not fill. Durum wheat production is forecast at 9.145 million bushels, down 3 percent from last month, but up 71 percent from 1994 due mainly to the large increase in harvested acreage. Winter wheat production is not estimated as of September 1. August winter wheat production forecast added to all spring wheat production totals 200.2 million bushels. This total all wheat production only trails 1993's record year, but is 17 percent above last year.

Barley production is estimated at 64.8 million bushels, down nearly 4 percent from last month but up 23 percent from last year. Estimated yield is set at 54 bushels per acre down 2 bushels from last month but is still the second highest yield on record. Oat production is not estimated as of September 1.

Estimated sugar beet production increased slightly from last month and is currently set at 1.3 million tons, down marginally from last year. Forecasted yield is set at 23.5 tons per acre, up .5 tons from last month but down .7 tons from last year.

New hay estimates will be available October 10. The August all hay production estimate was 5.5 million tons, up 21 percent from 1994.

U.S. all wheat production is forecast at 2.19 billion bushels, down 2 percent from August 1 and 6 percent less than in 1994. Area for grain is 60.9 million acres, down 1 percent from last year. Yields are now expected to average 35.9 bushels per acre, down 0.7 bushels from a month ago.

Other spring wheat production is forecast at 530 million bushels, down 6 percent from both last month and last year. Yield declines in North Dakota were only partially offset by an improved South Dakota yield. Lower than expected head weights lead to the North Dakota's drop. The U.S. yield is now 32.4 bushels per acre, down 2.0 bushels from last month's forecast. Durum wheat production is forecast at 105 million bushels, down 7 percent from August 1 but up 8 percent from 1994. Yield reductions in North Dakota and Montana are the reason for the production decline from last month. Area for harvest as grain remains at 3.26 million acres, up 19 percent from 1994. The September yield forecast is 32.3 bushels per acre, down 2.7 bushels from last month.

Barley production is forecast at 374 million bushels, down 3 percent from last month, but virtually unchanged from the 1994 crop. The expected yield per acre is forecasted at 58.3 bushels compared with last month's 59.9 bushels and last year's 56.2 bushels. Area harvested and to be harvested is estimated at 6.42 million acres, down 4 percent from last year.

U.S. sugar beet production is expected to total 29.1 million tons, up 1 percent from the August 1 forecast, but down 9 percent from 1994. Area for harvest, at 1.43 million acres, is virtually unchanged from last month's forecast, but down 1 percent from last year. The average yield, at 20.4 tons per acre, is 1.8 tons below last year's yield.

Corn production is forecast at 7.83 billion bushels, down 22 percent from the record high 1994 production. Based on conditions as of September 1, yields are expected to average 121.1 bushels per acre, down 4.5 bushels from last month and 17.5 bushels below a year earlier. Acreage for harvest as grain is estimated at 64.7 million acres, the same as last month.

SEPTEMBER 1 PASTURE & RANGE FEED CONDITION DECLINES

Drier weather has caused Montana's pasture and range feed condition to fall from a month ago. The condition remains mostly in the good to excellent range. As of September 1, the condition ratings were: 1% very poor, 3% poor, 24% fair, 47% good, and 25% excellent. The amount in the good to excellent range fell 14 points from last month. The northeast continues to have the lowest rating, while the remaining districts all show mostly good to excellent conditions.

Reporters of range and pasture feed conditions are asked to rate the percentage of the pastures that fall into the each of the following categories:

- **Very poor** - pastures and/or ranges are providing very little or no feed for the current time of the year. Supplemental feeding is required to maintain livestock.
- **Poor** - pastures and/or ranges are providing marginal feed for the current time of the year. Some supplemental feeding is required.
- **Fair** - pastures and/or ranges are providing adequate feed but less than the normal amount expected for the current time of the year.
- **Good** - pastures and/or ranges are providing the normal amount of feed for the current time of the year.

[1] District data funded by the Montana Wheat & Barley Committee. [2] Preliminary.

AG PRICES RECEIVED MIXED FOR JULY

Montana crop prices for the full month of July were mixed. Durum wheat decreased 44 cents to $5.23 per bushel. Winter wheat increased 24 cents to $4.03 per bushel, while spring wheat rose 8 cents to $3.90. Feed barley increased 1 penny to $2.22 per bushel, and malt barley fell 9 cents to $2.61 per bushel. Alfalfa hay prices, at $68.00 per ton, fell $3.00 from June, and other hay prices, at $61.00 per ton, dropped $2.00. The all wheat price for mid-August averaged $4.14 per bushel, and the all barley price was $2.43.

Livestock prices for the full month of July were lower compared with the previous month, except for sheep. Cow prices were down 30 cents to $39.60 per cwt. The average price for steers and heifers slipped 60 cents to $62.40 per cwt. Calf prices fell $5.20 to $65.30 per cwt. Prices received for sheep averaged $29.70, $1.70 above last month. Lamb prices dropped $1.10 to $85.70 per cwt. Milk prices decreased 20 cents to $12.40 per cwt. Steer and heifer prices for mid-August averaged $63.80 per cwt.

Nationally, steer and heifer prices averaged $61.90 per cwt for the full month of July. Cow prices came in at $36.00 and hogs were $46.20 per cwt. The U.S. all wheat price was $4.09 per bushel and $2.43 per bushel for all barley. Egg prices were 60.9 cents per dozen.

The All Farm Products Index of Prices Received in August was 101 based on 1990- 92=100, unchanged from July. Price gains from July for broilers, hogs, peaches, and wheat more than offset declines for tomatoes, potatoes, soybeans, and cotton. However, the seasonal changes in the mix of commodities farmers sell also affect the overall index level. Lower relative seasonal marketings of wheat, hay, milk, and broilers more than offset the effect of relatively higher seasonal marketings of cattle, barley, grapes, and tobacco, resulting in no change to the overall index.

Compared with August 1994, the All Farm Products Index was up 4 points (4.1 percent). Higher prices in August relative to a year earlier for wheat, corn, hogs, and lettuce more than offset lower prices for cattle, tomatoes, calves, and milk.

UNITED STATES INDEX SUMMARY

WHEAT & BARLEY MOVEMENT DOWN FROM LAST YEAR

Montana wheat shipped to out-of-state destinations in December 1994-May 1995, at 74.5 million bushels, was 21 percent below the same period last year when the Grain Movement survey showed record shipments.

Shipments to eastern destinations totaled 3.3 million bushels, compared with 5.3 million bushels last year. Movement to the west was down 18 percent, at 70.3 million bushels. Other destinations, mostly south and southeast of Montana, received .9 million bushels down drastically from last year at 4.2 million bushels. Rail movement amounted to 71.1 million bushels, 95 percent of total shipments.

Montana barley shipped to out-of-state destinations, December 1994--May 1995, at 17.4 million bushels, was down 23 percent from same period last year. Shipments to western destinations were down 35 percent and eastern destinations were up 101 percent. Barley hauled by rail accounted for 90 percent of total movement, down 2 percent from the same period last year.

MONTANA JULY RED MEAT PRODUCTION DOWN; U.S. UP

Montana slaughter plants produced 1.41 million pounds, dressed weight, of red meat during July 1995, down 10 percent from last year and down 5 percent from last month. The number of cattle slaughtered, at 1,400 head, decreased 300 head from last year and average live weight, at 1,261, increased 54 pounds from a year ago.

A total of 2,600 hogs were slaughtered in July, the same as a year earlier. Average live weight decreased 3 pounds to 236 pounds. The number of sheep slaughtered, at 300 head, was also the same as last year and average live weight increased 1 pound to 118 pounds.

U.S. commercial red meat production for the United States totaled 3.43 billion pounds during July, up 2 percent from last year. Beef production totaled 2.08 billion pounds, up 3 percent from a year earlier. Head kill totaled 2.93 million, up 4 percent from a year ago. The average live weight, at 1,184 pounds, was down 8 pounds from last year.

Veal production totaled 24.0 million pounds, up 14 percent from a year earlier. Calf slaughter totaled 114,000, up 20 percent from last year. The average live weight was down 11 pounds to 371 pounds.

Pork production, at 1.30 billion pounds, was virtually unchanged from the previous year. Hog kill totaled 7.08 million head, slightly below a year earlier. The average live weight increased 3 pounds to 255 pounds.

Lamb and mutton production, at 19.0 million pounds, was up 1 percent from a year earlier. Slaughter totaled 310,000 head, down 2 percent from a year ago. The average live weight increased 4 pounds to 125 pounds.

January-July red meat production was 24.8 billion pounds up 4 percent from the comparable period a year ago. Accumulated beef production was up 3 percent, veal jumped 11 percent, pork rose 5 percent, but lamb and mutton dropped 7 percent.

CATTLE ON FEED UP 3 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 7.70 million head, up 3 percent from a year ago and virtually unchanged from August 1, 1993.

Placements in feedlots during July totaled 1.38 million, 13 percent below 1994 and 9 percent below 1993. Net placements of 1.33 million for July were down 14 percent from last year and 7 percent below 1993.

Marketings during July totaled 1.74 million, up 1 percent from 1994 and 2 percent above 1993.

Other disappearance during July was 55,000 head, no change from last year and 32 percent below 1993.

Cattle on Feed in 1000+ Capacity Feedlots Up 5 Percent

Cattle and calves on feed August 1, 1995 for the 7 States in the feedlots with 1,000 or more head capacity totaled 7.15 million head, 5 percent above the previous year and 6 percent above 1993. The inventory in the 1,000+ capacity feedlots accounted for 93 percent of the total inventory.

JULY WORKER NUMBERS UP

There were 3.67 million people working on the Nation's farms and ranches during the week of July 9-15, 1995. This compares with 3.51 million people during the July 1994 survey week. Self-employed farm operators accounted for 1.63 million of the total, along with 632,000 unpaid workers, and 1.07million workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 348,000 workers.

Farm operators paid their hired workers an average wage of $6.44 per hour during the July 1995 survey week. This rate was up 23 cents from a year earlier. Workers paid on an hourly basis earned $6.12 per hour compared with $5.91 last July. Field workers received an average of $6.09 per hour, up 24 cents from the July 1994 survey week. Livestock workers earned $5.94 per hour compared with $5.67 a year ago.

Self-employed farm operators worked an average of 39.0 hours, compared with 37.4 hours in the comparable week in 1994. Unpaid workers averaged 34.0 hours, compared to 32.0 hours last year. Hired employees worked 39.9 hours during the survey week, the same as last year.

Beginning in July 1994, all benefits received by hired workers are summarized by each benefit category. Benefits were provided for 484,000 hired workers. Farm operators provided housing for 170,000, meals for 74,000, bonuses for 76,000, health insurance for 222,000, transportation for 69,000, and other benefits for 217,000 hired workers.

U.S. JULY EGG PRODUCTION DOWN 1 PERCENT

U.S. egg production totaled 6.13 billion during July 1995, down 1 percent from the 6.21 billion produced during July 1994. Production included 5.17 billion table eggs and 966 million hatching egg type, of which 903 million were broiler-type and 63.0 million were egg-type. The total number of layers during July 1995 averaged 285 million, down 1 percent from the average number of layers during July 1994. July egg production per 100 layers was 2,148 eggs, compared with 2,155 in July 1994.

All layers in the U.S. on August 1, 1995, totaled 284 million, down 2 percent from a year ago. The 284 million layers consisted of 233 million layers producing table or commercial type eggs, 48.5 million layers producing broiler-type hatching eggs, and 2.72 million layers producing egg-type hatching eggs. Rate of lay per day on August 1, 1995, averaged 69.0 eggs per 100 layers, down 1 percent from the 69.5 eggs a year ago.

Laying flocks in the 30 major egg States produced 5.80 billion eggs during July, down 1 percent from July 1994. The average number of layers during July, at 270 million, was also down 1 percent from the year earlier.

U.S. JULY MILK PRODUCTION

Milk production in the 22 major States during July totaled 11.4 billion pounds, 1 percent above production in these same States in July 1994. June revised production, at 11.5 billion pounds was 2 percent more than June 1994.

Production per cow in the 22 ma States averaged 1,409 pounds for July, 20 pounds above July 1994. The number of cows on farms in the 22 major States was 8.10 million head, unchanged from both July 1994 and June 1995.

During the April-June period, the 22 major States produced 34.9 billion pounds of milk, 86.1 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 13.3 billion pounds for July 1995.

CROP PRODUCTION PROSPECTS IMPROVING

Continued good growing conditions are improving crop prospects. **Montana** winter wheat production, which is just starting to be harvested, is estimated at 61.5 million bushels with a yield of 41 bushels per acre, up 3 bushels from the July forecast. While the estimated yield is the second highest on record, production is down about 5 percent from a year ago because of the smaller harvested acreage. Spring wheat yield is estimated at 36 bushels per acre, up 2 bushels from July and up 6 bushels from last year. The forecasted yield is also the second highest yield on record. Total production is estimated at 129.6 million bushels, up 29 percent from last year and the largest spring wheat crop on record due to the large harvested acreage. Durum wheat production is estimated at 9.44 million bushels, up 77 percent from 1994, but unchanged from last month. The northeast area where most of the durum is grown has suffered a little more crop stress than the rest of the state. Yield is unchanged from last month and remains estimated at 32 bushels per acre.

Estimated barley yield increased 2 bushels from last month and is pegged at 56 bushels per acre which is also the second largest yield on record. Production is estimated at 67.2 million bushels, up 27 percent from last year. Oat production is set at 4.35 million bushels, up 21 percent from last year. Yield is estimated at 58 bushels per acre, up 6 bushels from last month and up 10 bushels from a year ago.

An estimated 18,000 acres of corn will be harvested for grain with an expected yield of 140 bushels per acre. Yields are up 5 bushels from last year and are the highest on record. Corn production is set at 2.52 million bushels. Sugar beet production is estimated at 1.3 million tons with an average yield of 23 tons per acre. Producers intend to harvest 55,500 acres of beets. Dry bean production is set at 227,000 cwt. with an average yield of 2,100 lbs. per acre.

Alfalfa hay production is estimated at a record 4.13 million tons, up 16 percent from last year. Yield is estimated at 2.5 tons per acre. Other hay production is estimated at 1.36 million tons with an average yield of 1.6 tons per acre.

At the U.S. level, all wheat production is forecast at 2.23 billion bushels, up 2 percent from July 1, but 4 percent less than in 1994. Yields are now expected to average 36.6 per acre, up 0.7 bushels from a month ago. Winter wheat production is forecast at 1.55 billion bushels, up 1 percent from July, but 7 percent less than the 1994 production. The yield forecast is 37.6 bushels per acre, up 0.6 bushels from last month. Harvested yields were better than expected for major soft red winter states. Farmers are reporting high yields in Colorado and the Nebraska Panhandle. Prospects for better than expected yields exist in Montana and the Pacific Northwest. Other spring wheat production is forecast at 561 million bushels, 3 percent more than last month, but slightly lower than last year. Improved yield prospects in the Dakota's and the Pacific Northwest have yields at 34.4 bushels per acre, up 1.2 bushels from last month's forecast. Durum wheat production for 1995 is forecast at 114 million bushels, up 1 percent from July and 17 percent higher than 1994. Nearly all of the production change from last month is due to a 50,000 acre increase in North Dakota. Average yields are once again forecast at 35.0 bushels per acre, down 0.5 bushel from a year ago.

Total barley production is forecast at 385 million bushels, up 2 percent from July and 3 percent above the 1994 production of 375 million bushels. Yields are expected to average 59.9 bushels per acre, up 0.9 of a bushel from July and 3.7 bushels above last year. Production of oats for 1995 is forecast at 186 million bushels, up 3 percent from July, but 19 percent below the 1994 crop. If realized, this would be the lowest oat production since records were first kept in 1866. The forecasted yield, at 57.3 bushels per acre, is up 1.4 bushels from July and 0.1 of a bushel above the 1994 crop. Corn production is forecast at 8.12 billion bushels, down 20 percent from the record high production of 1994. Based on August 1 conditions, yields are expected to average 125.6 bushels per acre, down 13.0 bushels from last year. Acreage for harvest, at 64.7 million acres, is down 1 percent from the June "Acreage" estimate and 11 percent below the 1994 final harvested acreage.

AUGUST 1 PASTURE & RANGE FEED CONDITION

Montana's pasture and range feed condition continues to be rated mostly good to excellent. Continued favorable weather has kept the pastures and range condition nearly the same as a month ago. As of August 1, the condition was rated at 3% poor, 11% fair, 56% good, 30 % excellent. All districts showed mostly good to excellent ratings with the Northeast having the lowest ratings in this range.

Reporters of range and pasture feed conditions are asked to rate the percentage of the pastures that fall into the each of the following categories:

- **Very poor** - pastures and/or ranges are providing very little or no feed for the current time of the year. Supplemental feeding is required to maintain livestock.
- **Poor** - pastures and/or ranges are providing marginal feed for the current time of the year. Some supplemental feeding is required.
- **Fair** - pastures and/or ranges are providing adequate feed but less than the normal amount expected for the current time of the year.
- **Good** - pastures and/or ranges are providing the normal amount of feed for the current time of the year.
- **Excellent** - pastures and/or ranges are providing feed in excess of what is normally expected for the current time of the year.

PRICES RECEIVED WERE MIXED FOR FULL MONTH OF JUNE

Montana crop prices for the full month of June were mixed, with prices increasing for grains and decreasing for hay. With stocks-to-use ratios for wheat and feed grains nearing historic lows nationally and disappointing harvests in some major wheat producing areas across the country, prices for Montana wheat are strengthening. Likewise, with Midwest feed grain crops in question, the price for barley is improving. Durum wheat increased 78 cents to $5.67 per bushel. Spring wheat rose 34 cents to $3.82 per bushel and winter wheat climbed 35 cents to $3.79. Feed barley increased 18 cents to $2.21 per bushel and malt barley climbed 13 cents to $2.70 per bushel. The all wheat price for mid-July averaged $4.32 per bushel, while the all barley price was $2.35. For the full month of June, alfalfa hay prices, at $71.00 per ton, and other hay prices, at $63.00 per ton, both decreased $2.00 from May.

Livestock prices for the full month of June were lower compared with the previous month, except for cows, sheep, and lambs. Cow prices were up 80 cents to $39.90 per cwt, but the average price for steers and heifers decreased $2.70 to $63.00 per cwt. Calf prices dropped $1.60 to $70.50 per cwt. Prices received for sheep averaged $3.00 above last month at $28.00. Lamb prices improved $2.70 to $86.80 per cwt. Milk prices decreased 80 cents to $12.60 per cwt. Steer and heifer prices for mid-July averaged $58.20 per cwt.

Nationally, steer and heifer prices averaged $63.30 per cwt for the full month of June. Cow prices came in at $38.20 and hogs were $42.30 per cwt. The U.S. all wheat price was $3.85 per bushel and $2.25 per bushel for all barley. Egg prices were 57.8 cents per dozen.

The All Farm Products Index of Prices Received in July was 102 based on 1990- 92=100, up 2 points from June. Price gains from June for wheat, hogs, corn, and broilers more than offset price declines for lettuce, cattle, cantaloupes, and tomatoes. The seasonal changes in the mix of commodities farmers sell also can affect the overall index level, but these changes were essentially offsetting in July. Higher relative seasonal marketings of wheat, grapes, tomatoes, and sorghum offset the effect of relatively lower seasonal marketings of milk, cantaloupes, potatoes, and oranges.

Compared with July 1994, the All Farm Products Index was 5 points higher. Higher prices for wheat, corn, hogs, and cotton compared with July 1994 levels more than offset lower prices for cattle, broilers, and calves.

UNITED STATES INDEX SUMMARY

MONTANA FARM NUMBERS DOWN SLIGHTLY FROM A YEAR AGO

Montana's number of farms and ranches is estimated at 22,000, down 500 from last year. This is the fourth year in a row of declining numbers. Land in farms remains unchanged from last year, which is estimated at 59.7 million acres.

The number of farms in the United States in 1995 is estimated at 2.07 million, up less than half a percent from 1994. Total land in farms is 972 million acres, virtually unchanged from last year. This is the first time since 1981 that farm numbers have increased from the previous year and is due to the increase in small farms. The increase in small farms is partly due to a change in definition that includes places with 5 or more horses, except horses in boarding stables and racetracks. This change in the definition was made to bring consistency with the Census Bureau. The average farm size decreased from 471 acres in 1994 to 469 in 1995.

The West Region had the largest percentage increase from 1994, at nearly one percent or 2,200 farms. The North Central Region showed the biggest increase in number of farms at 5,000 or about a half percent. The Northeast Region was the only region to show a decline in farm numbers from a year ago, with 1,400 or 1.1 percent fewer farms. Farm numbers in the South Region rose 2,800.

The number of U.S. farms in the economic sales class between $1,000 and $9,999 increased from 985,420 in 1994 to 1,012,220 in 1995. Those with sales in the $10,000-$99,999 group decreased from 741,700 to 727,400. The $100,000 and over sales group decreased from 337,600 to 333,700 farms.

Estimates for the number of farms and land in farms refer to June 1. A farm is defined as "any establishment from which $1,000 or more of agricultural products were sold or would normally be sold during the year."

JULY CATTLE INVENTORY UP 2 PERCENT

All cattle and calves in the United States as of July 1, 1995, totaled 114.3 million head, up 2 percent from July 1, 1994, and up 5 percent from the 109.0 million two years ago. All cows and heifers that have calved, at 46.7 million, were up 2 percent from a year ago and 5 percent above two years ago. There were 37.2 million beef cows, up 3 percent from last year and 7 percent above two years ago. Milk cows, at 9.5 million head, were down 1 percent from last year.

Other class estimates on July 1, 1995, and the changes from July 1 last year and two years ago, respectively, are as follows:

- All heifers 500 pounds and over, 17.4 million, up 2 percent from both years.
- Beef replacement heifers, 5.7 million, down 3 percent and no change.
- Milk replacement heifers, 3.9 million, down 2 percent from both years.
- Other heifers, 7.8 million, up 8 percent and up 7 percent.
- Steers weighing 500 pounds and over, 15.3 million, unchanged and up 3 percent.
- Bulls weighing 500 pounds and over, 2.4 million, up 4 percent and up 9 percent.
- Calves under 500 pounds, 32.5 million, up 3 percent and up 7 percent.
- All cattle and calves on feed for slaughter, 11.0 million, up 5 percent from a year ago.

The 1995 calf crop is expected to be 41.5 million, up 2 percent from 1994 and 5 percent above 1993. Calves born during the first half of the year are estimated at 30.4 million head, up 2 percent from 1994 and up 6 percent from 1993.

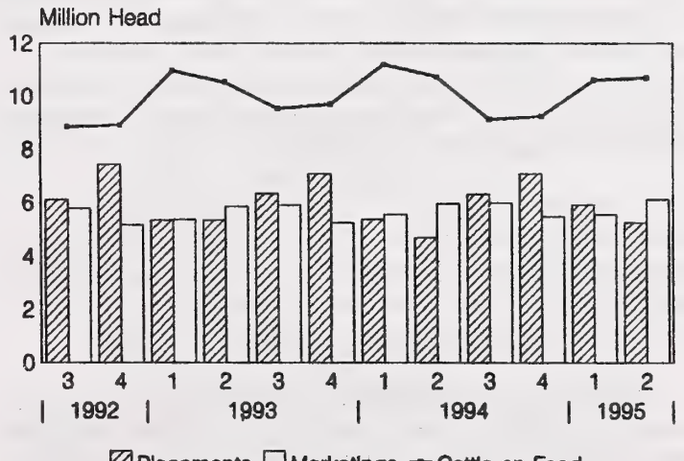
CATTLE ON FEED UP 5 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed for slaughter market in the 13 States preparing quarterly estimates totaled 9.56 million head, up 5 percent from a year ago and up fractionally from July 1, 1993. The inventory included 6.11 million steers and steer calves, up 2 percent from a year ago and fractionally above two years ago. This group accounts for 63.9 percent of the total inventory. Heifers and heifer calves accounted for 3.40 million head, 9 percent above a year ago.

Placements of cattle and calves on feed in the 13 States during the April-June 1995 quarter totaled 5.25 million, up 12 percent from last year, but 2 percent below April-June 1993. **Net placements** of 4.98 million for April-June were 15 percent above last year and 2 percent above April-June 1993.

Marketings of fed cattle during the April-June 1995 quarter totaled 6.11 million, up 3 percent from the same quarter last year and 4 percent above two years ago. This is the largest April-June marketings since the current 13 State series began in 1982. **Other disappearance** totaled 272,000 head compared with 334,000 in April-June 1994 and 465,000 in April-June 1993.

CATTLE ON FEED, PLACEMENTS, MARKETINGS BY QUARTERS FOR 13 STATES
(AZ, CA, CO, ID, IA, IL, KS, MN, NE OK, SD, TX, WA)



JUNE RED MEAT PRODUCTION UP IN MONTANA, DOWN IN U.S.

Montana slaughter plants produced 1.48 million pounds, dressed weight, of red meat during June 1995, compared with 1.79 million pounds a year ago. Cattle slaughter, at 1,700 head, was 400 head below last year. The total live weight, at 2.1 million pounds, was down 22 percent from a year ago. The average live weight was 1,246 pounds, down 4 pounds from a year earlier.

There were 2,100 head of hogs slaughtered in June, 100 less than a year ago. The average live weight, at 233 pounds, decreased 8 pounds from last year. Sheep slaughter accounted for 200 head in June, the same as a year earlier. The average live weight, at 115 pounds, increased 2 pounds from 1994.

Commercial red meat production for the **United States** totaled a record high 3.79 billion pounds during June, 5 percent above the previous record high set in June 1994. Beef production totaled 2.28 billion pounds, up 5 percent from the previous record high set in June 1977. Head kill totaled 3.24 million, up 7 percent from last year. The average live weight, at 1,177 pounds, was down 1 pound from last year.

Veal production totaled 26.0 million pounds, up 11 percent from a year earlier. Calf slaughter totaled 117,700, up 17 percent from a year ago. The average live weight was down 17 pounds to 383 pounds.

Pork production, at 1.46 billion pounds, was up 4 percent from the previous record high set in June 1994. Hog kill totaled 7.91 million head, 4 percent above June 1994. The average live weight increased 1 pound to 257 pounds. Lamb and mutton production, at 22.0 million pounds, was down 8 percent from June 1994. Slaughter totaled 360,200 head, down 8 percent from last year. The average live weight was 126 pounds.

JULY 1 ALL SHEEP AND LAMBS TOTAL 10.9 MILLION HEAD

All sheep and lambs in the United States on July 1, 1995 totaled 10.9 million head, 23 percent above January 1, 1995 but 5 percent below July 1, 1994. The number of breeding sheep and lambs on hand on July 1, 1995 was 6.45 million head, virtually unchanged from January 1995. Of the July 1 breeding herd, 5.38 million head were ewes one year old and older, 245,000 head were rams one year old or older, and 830,000 head were replacement lambs.

Market sheep and lambs, at 4.45 million head, were 81 percent above January 1995. Of the total market lambs, 63.1 percent were under 65 pounds, 19.7 percent were 65 to 84 pounds, 11.0 percent were 85 to 105 pounds, and the remainder, 6.2 percent, were over 105 pounds on July 1.

The lamb crop in the United States during 1995 is expected to total 5.70 million head, down 3 percent from the 1994 actual lamb crop of 5.90 million head. Lambs born during January - June 1995 totaled 4.96 million head while 740,000 lambs are expected to be born during July - December.

The July 1 Sheep and lamb numbers are also published by regions. Montana is included with Colorado, South Dakota, Utah, and Wyoming. This region accounted for 4.07 million head of sheep and lambs, or 37.3 percent of the total U.S. sheep and lambs.

This region accounted for 2.14 million breeding sheep and lambs. Of the total breeding sheep and lambs, 1.83 million head were ewes one year old and older, 70,000 head were rams one year old or older, and 240,000 head were replacement lambs.

All market lambs for the region on July 1, 1995 totaled 1.91 million head. Of the total market lambs, 75.3 percent were under 65 pounds, 12.1 percent were 65 to 84 pounds, 7.1 percent were 85 to 105 pounds, and the remaining 5.5 percent were over 105 pounds.

The lamb crop for the region is expected to total 1.76 million head. Lambs born during January - June 1995 totaled 1.70 million head, with 55,000 lambs expected to be born during July - December.

1994 MONTANA WHEAT AND BARLEY VARIETY SURVEY

The top three winter wheat varieties grown in Montana during 1995 are Neeley, Rocky, and Tiber. They account for over one-half of the total winter wheat acreage and are the same top three varieties as last year except for Rocky and Tiber exchanging positions. Neeley remained the most popular winter wheat variety planted in 1995 for the eighth consecutive year. It is the top variety in central Montana and accounts for over one-fifth of the winter wheat acreage within the state. Rocky, the dominant variety in the north central portion of the state moved up one position in 1994. Tiber, the top variety in southeastern Montana, dropped one position from 1994, but still accounts for over 12 percent of the winter wheat acreage.

The three most popular hard spring wheat varieties planted in Montana during 1995 were Amidon, Westbred Rambo and Fortuna. These three varieties make up 48 percent of the other spring wheat acreage. Amidon, a North Dakota variety, was the number one spring wheat raised in the state for the fourth consecutive year. Westbred Rambo retained its second place position from 1994. The north central district continues to be the largest producer of the variety, accounting for over 82 percent of the planted Westbred Rambo acreage in the state. Fortuna moved into third place this year increasing in acreage by nearly 10 percent in 1995. The durum wheat variety Kyle accounts for 23 percent of the state's durum wheat acreage. Vic, the second leading durum wheat variety in the state moved up two places from last year.

Harrington remained the top barley variety for the second consecutive year. The north central district continues to be the largest producer of this malting-type variety, where more than 77 percent of the Harrington acreage is grown. Similar to last year, Hector remained in second place for all barley varieties and is the leading feed-type variety.

MONTANA WHEAT & BARLEY VARIETIES

Montana's wheat and barley varieties report was made possible with funds provided by the Montana Wheat & Barley Committee and the American Malting Barley Association, Inc. A more detailed report may be obtained from our office upon request.

SECOND QUARTER MILK PRODUCTION UP IN MONTANA AND U.S.

Montana milk production was 83 million pounds for the April - June quarter of 1995, up 6 million pounds from a year ago. The average number of milk cows on hand was 21,000 head, the same as last year. An average of 16.3 pounds of grain and other concentrates were fed per cow on July 1, 1995, down from 17.4 pounds last July. The value of grain and concentrates fed was $7.25 per cwt., down 25 cents from last year.

The U.S. quarterly milk production was 40.5 billion pounds, 1 percent above the April-June period last year. The average number of milk cows in the U.S. during the April-June quarter was 9.52 million head, 14,000 head less than the same period last year.

Grain and other concentrates fed to milk cows on July 1, 1995, averaged 18.3 pounds per cow, 0.1 of a pound more than July 1, 1994. The value of grain and other concentrates fed to milk cows on July 1, 1995, averaged $7.66 per hundredweight, $0.44 less than the price on July 1, 1994.

U.S. PELT PRODUCTION DOWN 1 PERCENT

Mink pelt production in the United States in 1994 totaled 2.5 million pelts, down 1 percent from 1993. Wisconsin, the major mink producing State, produced 611,000 pelts. By color class, the number of pelts as a percent of the total U.S. production follows: Standard - 46.1 percent; Mahogany - 18.9 percent; Ranch Wild - 11.0 percent; Gunmetal - 9.7 percent; Demi-buff - 6.9 percent. The remaining color classes accounted for 7.4 percent.

Mink pelts produced during the 1994 crop year were valued at $82.6 million dollars, down 4 percent from $86.2 million a year ago. The average price per pelt for the 1994 crop year was $33.00, compared with $34.10 in 1993.

Female mink bred to produce kits in 1995 totaled 708,300, down 1 percent from the previous year. Percent of total females bred to produce kits in 1995 by color class are: Standard - 49.6 percent; Mahogany - 17.5 percent; Gunmetal -10.6 percent; Ranch Wild - 8.2 percent; Demi-buff - 5.9 percent. The remaining color classes accounted for 8.2 percent.

There were 457 mink farms producing pelts in 1994, down 8 percent from a year ago. Leading States were Utah with 130 farms, Wisconsin with 78 farms, and Minnesota with 53.

JULY 1 CROP PRODUCTION FORECAST

Montana farmers expect to produce the second largest wheat crop on record. Although cool weather and frequent rains have caused crop progress to be behind normal, the general feeling is that the small grain crops look very good. Total production for all wheat is estimated at 188.8 million bushels, up nearly 11 percent from last year and is the second largest production ever, trailing the 1993 record.

Spring wheat production is estimated at a record 122.4 million bushels, up 22 percent from 1994. This is mainly attributed to the large increase in acreage since a lot of winter wheat did not get planted last fall. Yield is projected at 34 bushels per acre, 4 bushels more than last year, and tied with the second highest yield on record. Growers expect to harvest 3.6 million acres, the most acreage since 1953 when estimates for other spring wheat and durum wheat were combined as all spring wheat.

Winter wheat production is estimated at 57 million bushels, down nearly 12 percent from last year, but up 4.5 million bushels from the June forecast. Yield is estimated at 38 bushels per acre, up 3 bushels from the June forecast and the 1994 final yield. Harvested acreage remains unchanged from the June forecast of 1.5 million acres, but down 350,000 acres from last year.

Durum wheat production is forecast at 9.4 million bushels, up nearly 77 percent from last year. This increase is mainly due to the large increase in acreage, triggered by recent strong durum prices. Yield is set at 32 bushels per acre and 295,000 acres are expected for harvest.

The expected barley yield of 54 bushels is the second highest on record and is up 10 bushels from last year. Total production is estimated at 64.8 million bushels, up 23 percent from a year earlier. Harvested acreage is unchanged from 1994 at 1.2 million acres. Oat production is up slightly from last year at 3.9 million bushels. Yield is up 4 bushels from last year at 52 bushels per acre and harvested acreage remains unchanged from 1994 at 75,000 acres.

At the US level, all wheat production for 1995 is forecast at 2.19 billion bushels, down 6 percent from 1994 to the lowest level since 1991. Yields are expected to average 35.9 bushels per acre, down 1.7 bushels from last year. Harvested area, at 61.0 million, is 1 percent less than a year ago.

Winter wheat production is forecast at 1.53 billion bushels, down 5 percent from the June forecast and 8 percent from 1994. U.S. yields are now expected to average 37.0 bushels per acre, down 2.6 bushels from last month and 3.2 bushels from last year. Area for grain harvest is estimated at 41.3 million acres, unchanged from both last year and the June 30 "Acreage" report. Hard red winter wheat States from Nebraska to Texas have lower yields than last month. Kansas and Oklahoma are off 7 and 6 bushels, respectively. In both of these states large numbers of heads were more than offset by record low head weights. The low head weights are from a combination of freeze damage, disease problems (notably rust) and weather damage to ripe wheat. Prospects for improved yields in Montana, Colorado, and South Dakota partially offset the Central Plains declines. Both Colorado and South Dakota have record high head counts.

Other spring wheat production is forecast at 546 million bushels, down 3 percent from 1994. Area for grain harvest is 16.4 million acres, down 7 percent from last year. Yields are forecast at 33.2 bushels per acre, up 1.4 bushels per acre from last season. The expected yields are higher than 1994 in all states except Colorado, North Dakota, and Oregon. Crop development trails the average in nearly all states; North Dakota is about 2 weeks late. The first full durum production forecast for 1995 is 112 million bushels, up 15 percent from 1994. This will be the largest durum production since 1990. Yields are forecast at 35.0 bushels per acre, off a half bushel from last year. Harvested area, at 3.21 million acres, is up 17 percent from 1994.

Barley production is forecast at 379 million bushels, as of July 1, 1995. This production, if realized, would be 1 percent above the 1994 production of 375 million bushels. Yields are expected to average 59.0 bushels per acre, up 2.8 bushels from last year. Area harvested and to be harvested, at 6.42 million acres, is 4 percent below the 6.67 million acres harvested last year. Total 1995 oat production is forecast at 182 million bushels, down 21 percent from last year. If realized, this would be the lowest oat production since records were first kept in 1866. The forecasted yield, at 55.9 bushels per acre, is down 1.3 bushels from last season's 57.2 bushels. Area harvested and to be harvested, at 3.25 million acres, is down 19 percent from the 4.02 million harvested in 1994, and also the least since 1866.

PRICES RECEIVED

Montana crop prices for the full month of May were up from April, with the exception of barley and alfalfa hay. Barley dropped 7 cents to $2.07 per bushel, while winter wheat rose 3 cents to $3.44. Spring wheat increased 11 cents to $3.48 and durum wheat jumped 15 cents to $4.89 per bushel. Alfalfa hay averaged $73.00 a ton, $1.00 lower than the previous month and other hay went up $2.00 to $65.00 per ton. Mid-June prices for all wheat averaged $3.76 per bushel and barley came in at $2.18 per bushel.

Montana livestock prices continue to drop when comparing the full month to the previous month. Lambs were the exception, increasing $18.30 to $84.10 per cwt. Steers and heifers prices decreased $1.10 to $65.70 per cwt and mid-June prices are averaging $64.20 per cwt. Cow prices dropped $1.70 to $39.10 per cwt for the full month of May. Calf prices averaged $2.10 lower at $72.10 per cwt. Prices received for sheep were down 60 cents to $25.00. Milk prices increased 30 cents to $13.40 per cwt.

At the national level, steer and heifer prices averaged $63.60 per cwt for the full month of May. Cow prices came in at $37.00 and hogs were $37.20 per cwt. The U.S. all wheat price was $3.66 per bushel and $2.20 per bushel for all barley. Egg prices were 56 cents per dozen.

The All Farm Products Index of Prices Received in June was 100 based on 1990-92=100, unchanged from May. Price declines from May for milk, strawberries, lettuce, and peaches more than offset gains for wheat, hogs, corn, and tomatoes. However, the seasonal changes in the mix of commodities farmers sell also affect the overall index level. Higher relative seasonal marketings of wheat, hay, grapes, and cantaloupes more than offset the effect of relatively lower seasonal marketings of cattle, oranges, cotton, and strawberries, resulting in no change to the overall index.

Compared with June 1994, the All Farm Products Index was also unchanged. Higher prices in June relative to a year earlier for wheat, cotton, tomatoes, and peaches were offset by lower prices for milk cattle, broilers, and soybeans.

UNITED STATES INDEX SUMMARY

INDEX 1990-92=100	May 1994	June 1994	May 1995	June 1995

JULY 1 PASTURE & RANGE FEED CONDITION

Adequate moisture is keeping Montana's pasture and range feed condition in excellent shape this year. As of July 1,1995, the condition was rated as 1% poor, 13% fair, 57% good, and 29% excellent. This is a 10-point increase in the good to excellent range from a month ago. Some reporters are saying the pastures and ranges look the best they have in years. All districts are reporting mostly good to excellent conditions.

Reporters of range and pasture feed conditions are asked to rate the percentage of the pastures that fall into the each of the following categories:

- **Very poor** - pastures and/or ranges are providing very little or no feed for the current time of the year. Supplemental feeding is required to maintain livestock.
- **Poor** - pastures and/or ranges are providing marginal feed for the current time of the year. Some supplemental feeding is required.
- **Fair** - pastures and/or ranges are providing adequate feed but less than the normal amount expected for the current time of the year.
- **Good** - pastures and/or ranges are providing the normal amount of feed for the current time of the year.
- **Excellent** - pastures and/or ranges are providing feed in excess of what is normally expected for the current time of the year.

PROJECTED U.S. WHEAT STOCKS

Projected U.S. 1995/96 ending stocks of wheat are down 31 million bushels from last month and the lowest since 1973/74. Forecast production is down 72 million bushels from last month, largely because of lower winter wheat yields. The lower crop results in a reduction of 50 million in projected exports. With the tighter U.S. and global supply and use balances, the projected price range is up 30 cents on each end to $3.65 to $4.05 per bushel.

JUNE PLANTED ACREAGE DOWN FROM MARCH INTENTIONS

Montana farmers planted an estimated 3.7 million acres of spring wheat this year and plan on harvesting 3.6 million acres. This is a 7 percent increase in planted acreage from 1994, but is down 200,000 acres from March 1 intentions. This is the largest spring wheat acreage since 1953. Poor planting conditions last fall kept many farmers from seeding winter wheat forcing the change to spring wheat. Some winter wheat acreage didn't develop this spring and had to be torn up and reseeded to spring wheat. There were 1.65 million acres of winter wheat planted, down over 15 percent compared to year ago. This is the smallest winter wheat planted acreage since 1970 and the second smallest acreage since 1951. Farmers intend to harvest 1.5 million acres, down nearly 19% from last year. Strong prices for durum encouraged a sharp increase in durum acreage planted. Farmers planted an estimated 300,000 acres this year compared with 180,000 acres last year. Durum growers expect to harvest 295,000 acres. All wheat planted is estimated at 5.65 million acres, up slightly from last year.

Barley planted acreage is set at 1.3 million acres, the same amount as last year. Harvested acreage is estimated at 1.2 million acres, also unchanged from 1994. Acres planted to oats are set at 145,000 acres, up 4% from last year, and 75,000 acres are intended for harvest, unchanged from last year.

Farmers and ranchers expect to harvest 1.65 million acres of alfalfa hay, up over 6% from last year. The rains this year are enabling a 31% increase in expected other hay harvested acreage, currently set at 850,000 acres.

Corn planted for all purposes is set at 55,000 acres, down 5,000 acres from last year. Planted acreage of sugar beets increased slightly and is currently set at 55,700 acres. There were 11, 000 acres of dry bean planted compared with 10,800 last year.

At the U.S. level, planted area for all wheat is estimated at 69.4 million acres; area for grain, 61.0 million. Both acreage levels are down 1 percent from 1994. Growers planted 49.3 million acres of winter wheat, up slightly from both 1994 and the previously published 1995 estimate. Acres for grain are placed at 41.3 million, up 2 percent from the June 1, 1995 forecast and unchanged from 1994. Area planted for durum wheat is placed at 3.27 million acres, up 15 percent from last year. Of this, 3.21 million acres are expected to be harvested for grain. Both levels would be the highest since 1990. Other spring wheat acreage is estimated at 16.8 million acres, down 8 percent from 1994. Growers intend to harvest 16.4 million acres for grain, down 7 percent from last year. A cold, wet planting season prevented many farmers from seeding all the area they originally intended. This was especially true in South Dakota, North Dakota, and Minnesota.

Barley seedings last fall and this spring totaled 6.80 million acres, down 5 percent from last year. This is the least acreage seeded to barley since planted acreages were first estimated in 1926. The area to be harvested for grain is expected to total 6.42 million acres, down 4 percent from last year. If realized this would be the least acreage harvested since 1903 when 6.23 million acres were harvested for grain. Oats planted last fall and this spring totaled 6.44 million acres, down 3 percent from 1994 and the lowest acreage planted since estimates were first made in 1926. Growers intend to harvest 3.25 million acres for grain in 1995, down 19 percent from the 4.02 million acres harvested in 1994. If realized this would be the least oat acreage harvested for grain since records were first kept in 1866.

Corn planted for all purposes totaled 72.0 million acres, down 9% from last year. Harvested acreage is estimated at 65.0 million acres. Alfalfa hay harvested acreage is set at 24.6 million acres and other hay harvested acres are set at 35.6 million acres. Dry bean acreage is estimated at 2.04 million acres, while sugar beet acreage is set at 1.42 million acres.

The Montana crop acreage and grain stocks estimates in this issue of the Reporter are the result of surveying approximately 3,000 Montana farmers and ranchers during June. Names were selected on a statistical probability basis. SPECIAL THANKS to those operators that were interviewed and responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

MAY RED MEAT PRODUCTION

Montana slaughter plants produced 1.49 million pounds, dressed weight, of red meat during May, 1995, compared with 1.64 million pounds a year ago, and 1.31 million pounds last month. Cattle slaughter, at 1,600 head, was 300 head below last year. The total live weight in May was 1.9 million pounds, down 18 percent from last year. The average live weight was 1,224 pounds, down 22 pounds from a year earlier.

There were 2,600 head of hogs slaughtered in May, 300 more than a year ago. The average live weight, at 250 pounds, was the same as last year. Sheep slaughter accounted for 100 head in May, down 100 head from 1994. The average live weight, at 119 pounds, increased 4 pounds from a year ago.

Commercial red meat production for the **United States** totaled a record high 3.76 billion pounds during May, 10 percent above the previous record high set in May 1994. Beef production totaled 2.18 billion pounds, up 4 percent from the previous record high set in May 1986. Head kill totaled 3.12 million, up 10 percent from a year earlier. The average live weight at 1,170 pounds was down 2 pounds from last year. Veal production totaled 26.0 million pounds, up 18 percent from a year earlier. Calf slaughter totaled 116,800, up 26 percent from a year ago. The average live weight was down 24 pounds to 385 pounds.

Pork production, at 1.53 billion pounds, was up 4 percent from the previous record high set in May 1980. Hog kill totaled 8.19 million head, 8 percent above May 1994. The average live weight increased 3 pounds to 258 pounds.

Lamb and mutton production, at 23.0 million pounds, was down 17 percent from May 1994. Slaughter totaled 370,900 head, down 15 percent from a year earlier. The average live weight was down 3 pounds to 127 pounds.

MAY U.S. EGG PRODUCTION UP 1 PERCENT

U.S. egg production totaled 6.24 billion during May 1995, up 1 percent from the 6.19 billion produced May 1994. Production included 5.26 billion table eggs and 980 million hatching egg type, of which 914 million were broiler-type and 66.0 million were egg-type. The total number of layers during May 1995 averaged 291 million, up 1 percent from the 289 million during May 1994. May egg production per 100 layers was 2,147 eggs, compared with 2,143 in May 1994.

All layers in the U.S. on June 1, 1995, totaled 289 million, compared with 288 million a year ago. The 289 million layers consisted of 237 million layers producing table or commercial type eggs, 49.2 million layers producing broiler-type hatching eggs, and 2.78 million layers producing egg-type hatching eggs. Rate of lay per day on June 1, 1995, averaged 69.4 eggs per 100 layers, up slightly from the 69.2 eggs a year ago.

Laying flocks in the 30 major egg production States produced 5.90 billion eggs during May, up 1 percent from May 1994. The average number of layers during May, at 275 million, was also up 1 percent from the year earlier.

JUNE 1 GRAIN STOCKS

Montana's all wheat stocks totaled 54 million bushels, down over 23% from a year ago. This is 22 percent below the last ten-year average of June 1 stocks. Winter wheat stocks, at 21 million bushels, are off 27% from last year. All spring wheat stocks, which includes durum wheat and total 33 million bushels, are down 21 percent from a year ago. Durum wheat stocks of 1.45 million bushels are down 20% from last year. Barley stocks total 8.6 million bushels, down 50% from a year ago and are at their lowest level since June of 1982.

U.S. old crop all wheat stocks on June 1, 1995 are estimated at 510 million bushels, down 10 percent from June 1, 1994. Old crop durum wheat stocks on June 1, 1995 are 26.2 million bushels, down 6 percent from last June 1. These are the lowest June 1 stocks on record. Barley stored in all positions on June 1, 1995, totaled 113 million bushels, 19 percent below the June 1, 1994 stocks. Oats stored in all positions on June 1, 1995, totaled 101 million bushels, 5 percent below the June 1, 1994 stocks. Corn stocks in all positions on June 1, 1995, totaled 3.42 billion bushels, 45 percent above a year earlier.

MAY MILK PRODUCTION

Milk production in the 22 major States during May totaled a record high 12.0 billion pounds, 1 percent above production in these same States in May 1994. April revised production, at 11.5 billion pounds, was 2 percent more than April 1994. Production per cow in the 22 major States averaged 1,478 pounds for May, 21 pounds above May 1994. The number of cows on farms in the 22 major States was 8.10 million head, 2,000 head less than both May 1994 and April 1995.

During the January-March period, the 22 major States produced 33.4 billion pounds of milk, 85.8 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 13.9 billion pounds for May 1995.

U.S. JUNE 1 HOG INVENTORY DOWN

U.S. inventory of all hogs and pigs on June 1, 1995, was 60.2 million head, 1 percent below June 1994, but 3 percent above the March 1, 1995 inventory. Breeding inventory, at 7.25 million head, was down 4 percent from June 1, 1994, but up 4 percent from the previous quarter. Market hog inventory, at 52.9 million head, was slightly below June 1, 1994, but 3 percent above March 1, 1995.

The December-May 1995 U.S. pig crop was 50.9 million head, 1 percent less than 1994, but up 4 percent from the same period in 1993. Sows farrowing during this period totaled 6.13 million head, down 2 percent from last year, but 2 percent above two years ago. The March-May pig crop totaled 27.1 million head, down 3 percent from a year ago, but 4 percent above 1993. Sows farrowing from March to May totaled 3.26 million head, 4 percent less than a year ago. The average of 8.32 pigs per litter is the highest March-May litter rate in history.

U.S. producers intend to have 3.05 million sows farrow during the June-August 1995 quarter, 2 percent less than the actual farrowings during the same period last year, but 3 percent above 1993. Intended farrowings for September-November 1995, at 3.03 million sows, is 1 percent above actual farrowings during the same period in 1994, and up 2 percent from the 1993 period.

MONTANA SWEET CHERRY PRODUCTION DOWN 20 PERCENT

Montana sweet cherry production is estimated at 600 tons, down from 750 tons last year. While the trees bloomed very well this spring, the cool, wet weather during pollination kept the bee activity down and hurt projected production. Trees replanted after the hard freeze of 1989 are just starting to produce fruit.

At the U.S. level, cherry production is estimated at 135,700 tons, down 35 percent from a year ago. Major growing states were hit with bad weather during pollination and/or rains causing splitting later in the growing season.

JUNE 1 WINTER WHEAT PRODUCTION FORECAST DOWN SLIGHTLY

Montana winter wheat farmers expect to produce 52.5 millions bushels this year, down slightly from the May 1 forecast of 56.0 million bushels, due to a decrease in expected harvested acreage. If realized this forecast would be down nearly 19% from last year and would be the lowest winter wheat production since 1988.

Winter wheat yield, at 35 bushels per acre, remains unchanged from May 1 and unchanged from last year's estimate. It should be noted that the yield reflects the remaining crop after some poor stands were destroyed and reseeded to spring wheat. Estimated acreage for harvest dropped 100,000 acres from the May 1 forecast.

Some winter wheat did not develop normally, forcing producers to plow up the crop and reseed to spring wheat. Earlier indications showed that most of the winter wheat fared quite well, considering the dry fall and the unusual spring weather that Montana witnessed, but as the crop finally started to develop some of the crop did not fare as well as thought. There have been reports of the plants not tillering well resulting in poor, thin stands, as one report said, "some of the crop seems to be progressing backwards." The slow crop development also gave the weeds a better chance of taking over the winter wheat. The remaining winter wheat crop seems to be holding its own. As of June 4, the crop condition was rated at 5% very poor, 13% poor, 32% fair, 43% good, and 7% excellent.

At the U.S. level, winter wheat production is forecast at 1.61 billion bushels, down 2 percent from May 1 and down 3 percent from 1994. Area for grain harvest is 40.6 million acres, down 100,000 acres from May 1 due to a decrease in Montana. Yields are now expected to average 39.6 bushels per acre, down 0.6 bushels from both last month and last year. Most soft red winter declines are attributable to flooding and disease, which are the same factors that lowered Oklahoma's yield prospects. Crop conditions vary considerably within states. Overall, head counts are a record high, but are offset by very low spikelet counts.

Winter wheat district table is on back page.

PRICES RECEIVED

Montana barley, oats, and hay were the only commodities experiencing a price increase for the full month of April, when compared with the previous month. Barley was up 8 cents to $2.14 per bushel, while winter wheat was down 8 cents to $3.41. Spring wheat dropped 18 cents to $3.37 and durum wheat fell 12 cents to $4.74 per bushel. Oats came in 14 cents higher at $1.44 per bushel. Alfalfa hay averaged $74.00 a ton, $3.00 higher than the previous month and other hay went up $4.00 to $63.00 per ton. Mid-month May prices for all wheat averaged $3.85 per bushel. Barley producers saw a 20 cent increase to $2.34 per bushel in mid-May.

Montana saw sizable drops in its livestock prices for the full month of April, when compared with the previous month. Steers and heifers prices dropped $3.50 to $66.80 per cwt and mid-May prices are averaging $1.00 lower. Cow prices in the state decreased $2.70 to $40.80 per cwt for the full month of April. Calf prices averaged $5.40 lower at $74.20 per cwt. Prices received for sheep dropped $1.20 to $25.60, and lambs fell $6.80 to $65.80 per cwt. Milk prices decreased 30 cents to $13.10 per cwt.

At the national level, steer and heifer prices averaged $67.10 per cwt for the full month of April. Cow prices came in at $38.10 and hogs were $35.70 per cwt. The U.S. all wheat price was $3.48 per bushel and $2.14 per bushel for all barley. Egg prices were 62 cents per dozen.

The All Farm Products Index of Prices Received in May was 100 based on 1990-92=100, unchanged from April. Price declines from April for cattle, tomatoes, asparagus, and onions more than offset gains for potatoes, lettuce, and strawberries. However, the seasonal changes in the mix of commodities farmers sell also affect the overall index level. Higher relative seasonal marketings of cantaloupes, grapes, peaches, and sweet corn more than offset the effect of relatively lower seasonal marketings of cattle, calves, milk, and cotton resulting in no change to the overall index.

Compared with May 1994, the All Farm Products Index was 1 point (1.0 percent) lower. Price decreases from May 1994 for cattle, hogs, soybeans, and broilers more than offset price increases for wheat, lettuce, cantaloupes, and peaches.

JUNE 1 PASTURE & RANGE FEED CONDITION

Montana's pasture and range feed condition showed quite an improvement over last month. As of June 1 the conditions were rated as 4% poor, 20% fair, 47% good, 29% excellent. This is a 33 point increase in the good to excellent range over a month ago. There has been good precipitation over most of the state, although up to early June the cool weather has been keeping the growth slower than normal. The south central and southeast districts had the best reported conditions with the northwest showing the lowest.

Reporters of range and pasture feed conditions are asked to rate the percentage of the pastures that fall into the each of the following categories:

- **Very poor** - pastures and/or ranges are providing very little or no feed for the current time of the year. Supplemental feeding is required to maintain livestock.
- **Poor** - pastures and/or ranges are providing marginal feed for the current time of the year. Some supplemental feeding is required.
- **Fair** - pastures and/or ranges are providing adequate feed but less than the normal amount expected for the current time of the year.
- **Good** - pastures and/or ranges are providing the normal amount of feed for the current time of the year.
- **Excellent** - pastures and/or ranges are providing feed in excess of what is normally expected for the current time of the year.

APRIL MILK PRODUCTION

Milk production in the 22 major States during April totaled 11.5 billion pounds, 2 percent above production in the same States in April 1994. March revised production of 11.7 billion pounds was 3 percent more than March 1994. Production per cow averaged 1,423 pounds for April, 27 pounds above April 1994. The number of cows on farms in the 22 major States was 8.10 million head, 19,000 head more than April 1994 but 4,000 head less than March 1995.

During the January-March period, the 22 major States produced 33.4 billion pounds of milk, 85.8 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 13.4 billion pounds for April 1995.

MILK PRODUCTION, DISPOSITION, AND INCOME

Montana 1994 milk production was the same as 1993 at 307 million pounds. An average of 21,000 milk cows were on farms during the year, down 1,000 head from 1993. The rate per cow averaged 14,619 pounds, 664 pounds above 1993.

Cash receipts from marketings of milk during the year in Montana was 40.5 million dollars, 4 percent above 1993. Producer returns averaged $13.77 per cwt, and increase of $.40 from 1993. Marketings totaled 294 million pounds, up 1 percent from 1993. A total of 13 million pounds of milk was used on farms, 7 million pounds were fed to calves, and 6 million were consumed as milk, cream, and butter.

Natinally, milk production increased 2 percent in 1994 to 154 billion pounds. The rate per cow at 16,128 pounds, was 424 pounds above 1993. The annual average number of cows on farms at 9.53 million head, was 64,000 less than the 1993 average.

Cash receipts from marketings of milk during 1994 at $19.9 billion, was 4 percent above 1993. Producer returns averaged $13.12 per cwt., $0.18 per cwt. above the 1993 average. Marketings totaled 152 billion pounds, 2 percent above 1993. Marketings include whole milk and producer separated cream sold to plants and dealers as well as milk sold directly to consumers.

An estimated 1.76 billion pounds of milk were used on farms where produced, 4 percent less than 1993. Calves were fed 77 percent of this milk with the remainder consumed in producer households as milk, cream, and butter.

CATTLE ON FEED UP 1 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 8.79 million head, up 1 percent from a year ago and up 5 percent from May 1, 1993. This is the largest May inventory for the 7 States since 1973.

Placements in feedlots during April totaled 1.44 million, 1 percent above 1994 and 8 percent above 1993. Net placements of 1.36 million for April were up 2 percent from last year and 13 percent above 1993.

Marketings during April totaled 1.56 million, down 3 percent from a year ago and 1 percent below 1993. Other disappearance during April was 80,000 head, 2 percent below last year and 37 percent below 1993.

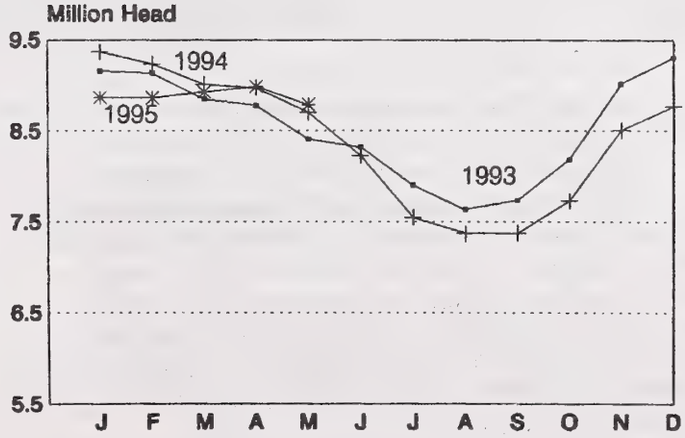
7 STATES
(AZ, CA, CO, IA, KS, NE, TX)



FARM WAGE RATES FOR APRIL

There were 2.82 million people working on the Nation's farms and ranches during the week of April 9-15, 1995. This compares with 2.92 million people during the April 1994 survey week. Self-employed farm operators accounted for 1.40 million of the total, along with 386,000 unpaid workers, and 822,000 workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 214,000 workers.

Farm operators paid their hired workers an average wage of $6.49 per hour during the April 1995 survey week, up 7 cents from a year earlier. Workers paid on an hourly basis earned $6.20 per hour compared with $6.11 in April 1994. Field workers received an average of $6.05 per hour, up 3 cents from the April 1994 survey week. Livestock workers earned $5.88 per hour compared with $5.80 a year earlier.

Benefits were provided for 372,000 hired workers. Farm operators provided housing for 124,000, meals for 48,000, bonuses for 81,000, health insurance for 188,000, transportation for 55,000, and other benefits for 188,000 hired workers.

Farm operators in the Mountain I region, which includes Montana, paid their hired workers an average wage of $5.71 per hour during the April 1995 survey week, up 8 cents from a year ago. Field workers received $5.61, down 9 cents from last year, while livestock workers earned $5.38, up 9 cents from wages in 1994.

APRIL EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 6.17 billion during April 1995, up 2 percent from the 6.07 billion produced April 1994. Production included 5.23 billion table eggs and 939 million hatching egg type, of which 873 million were broiler-type and 66.0 million were egg-type. The total number of layers during April 1995 averaged 294 million, up 1 percent from the 290 million during April 1994. April egg production per 100 layers was 2,101 eggs, compared with 2,094 in April 1994.

All layers in the U.S. on May 1, 1995, totaled 293 million, compared with 289 million a year ago. The 293 million layers consisted of 240 million layers producing table or commercial type eggs, 49.8 million layers producing broiler-type hatching eggs, and 2.86 million layers producing egg-type hatching eggs. Rate of lay per day on May 1, 1995, averaged 69.1 eggs per 100 layers, up slightly from the 69.0 eggs a year ago.

Laying flocks in the 30 major egg producing States produced 5.84 billion eggs during April, up 2 percent from April 1994. The average number of layers during April, at 278 million, rose 1 percent from a year earlier.

MAY 1 POTATO STOCKS

Montana's May 1 potato stocks totaled 350,000 cwt., more than twice May 1, 1994 stocks. The May 1 stocks accounted for 11 percent of the 1994 crop compared with 6 percent the previous year. The slower movement of seed potatoes for planting precipitated the increase in potato stocks. Potato growers had planted only 9 percent of the crop on May 1, compared with 28 percent in 1994.

United States potato stocks on May 1, totaled 81.5 million cwt., up 10 percent from 1994 and 9 percent above 1993. Stocks made up 20 percent of fall potato production in the 15 storage States, the same as a year ago. Disappearance was 6 percent more than last year. Processor usage as well as shrinkage and loss were up 8 percent.

Processing continued to move potatoes at a record high pace, accounting for 152 million cwt. of potatoes from the 1994 crop, up 8 percent from the same period last year and 17 percent above two years ago. March processor usage was 18.4 million cwt., up 7 percent from a year ago and 25 percent above two years ago.

Disappearance from the start of harvest through April totaled 319 million cwt. of potatoes, up 6 percent from last year and 9 percent above two years ago. Shrinkage and loss was 30.9 million cwt., 8 percent above the 28.7 million cwt. lost last year but 3 percent below the losses of two years ago.

Western States potato stocks totaled 65.8 million cwt. in six States, up 7 percent from last year and 12 percent above two years ago. Idaho's stocks of 34.5 million cwt., were down 1 percent from a year ago, and made up 52 percent of the Western total. Colorado was off 2 percent from last year. Washington's stocks of 17.0 million cwt. and Oregon's stocks of 6.8 million cwt., were each up 26 percent. California's stocks were off 8 percent.

APRIL RED MEAT PRODUCTION

Montana slaughter plants produced 1.31 million pounds, dressed weight, of red meat during April, 1995, compared with 1.56 million pounds a year ago, and 1.33 million pounds last month.

Cattle slaughter, at 1,400 head, was 500 head below last year. The total live weight in April was 1.7 million pounds, down 28 percent from last year. The average live weight was 1,215 pounds, down 37 pounds from a year earlier.

There were 2,400 head of hogs slaughtered in April, 500 more than a year ago. The average live weight, at 249 pounds, increased 6 pounds from last year. Sheep slaughter accounted for 100 head in April, down 100 head from 1994. The average live weight, at 125 pounds, increased 18 pounds from a year ago.

Commercial red meat production for the **United States** totaled 3.30 billion pounds during April, 2 percent below 1994. Beef production totaled 1.85 billion pounds, down 3 percent from a year earlier. Head kill totaled 2.65 million, down 2 percent from 1994. The average live weight, at 1,171 pounds, dropped 4 pounds from last year.

Veal production totaled 22.0 million pounds, up 3 percent from a year earlier. Calf slaughter totaled 98,300 head, up 4 percent from last year. The average live weight was down 1 pound to 391 pounds.

Pork production, at 1.41 billion pounds, was down 2 percent from a year earlier. Hog kill totaled 7.55 million head, 3 percent below April 1994. The average live weight increased 3 pounds to 258 pounds. Lamb and mutton production, at 28.0 million pounds, increased 3 percent from April 1994. Slaughter totaled 440,100 head, up 5 percent from a year earlier. The average live weight was down 3 pounds to 126 pounds.

January-April red meat production was 13.8 billion pounds, up 3 percent from the comparable period a year ago. Accumulated beef production was up 1 percent, veal jumped 9 percent, pork rose 5 percent, but lamb and mutton dropped 6 percent.

AGRICULTURAL CHEMICAL USAGE

A portion of the fifth annual Ag Chemical Usage report issued by the National Agricultural Statistics Service (NASS) containing on-farm agricultural chemical use statistics is included in this Reporter. The full report and/or additional information can be obtained by calling our office at (800) 835-2612. The data presented in the report are part of the data series on chemical use funded through the 1990 Water Quality Initiative.

Wheat Highlights

Winter wheat producers applied nitrogen fertilizer to 86 percent of the winter wheat harvested acres in the 13 surveyed States. About half the harvested area received phosphate fertilizer and potash was used on 15 percent of the 13 State area. All surveyed States treated at least a portion of the harvested area with herbicides and 2,4-D again was the most widely used in area applied and quantity.

Other spring wheat fertilizer applications in the four surveyed States averaged 88, 77, and 23 percent of the acreage for nitrogen, phosphate, and potash, respectively. Herbicides were widely used in all States, with 2,4-D and MCPA most prevalent. Insecticide and fungicide use was limited. (Chemical Usage tables on back page)

WINTER WHEAT PRODUCTION AND HAY STOCKS

Montana 1995 winter wheat production is expected to be 56 million bushels, 14 percent below last year's crop. Acres expected to be harvested at 1.6 million, are 14 percent below the previous year and are the lowest since 1989. Yield per acre, based on May 1 conditions, is forecast at 35 bushels, unchanged from last year, but 1 bushel below the 5-year average.

Last fall conditions were unfavorable for seeding the winter wheat crop. Widespread drought in the later part of the year caused much apprehension among Montana farmers for planting the 1995 winter wheat crop. Winter weather conditions were not severe, and snow cover protection was generally good when temperatures dropped to lowest levels. This spring, the major winter wheat areas have received near normal precipitation and cool temperatures. Crop development is somewhat behind normal and condition ratings show about half of the crop in the good to excellent range.

For the **Nation,** winter wheat production is forecast at 1.64 billion bushels. This is down 1 percent from 1994. Based on May 1 conditions, the U.S. yield is expected to average 40.2 bushels per acre, unchanged from a year ago. Harvested area is placed at 40.7 million acres, down 1 percent from last year.

The April 10-11 freeze affected portions of southwestern Kansas, southeastern Colorado, the Oklahoma and Texas Panhandles and parts of northeastern New Mexico. Damage estimates range from moderate to severe depending on moisture and maturity at the time. The remaining wheat is generally in good condition, allowing yield projections to be up from last year's final. Most Soft Red Winter yields are down from last year's highs. Hard Red Winter yields are higher than last year in most States. The Pacific Northwest State yields are lower than a year ago or unchanged.

Hay stocks on **Montana** farms May 1, 1995 were 772,000 tons, down 33 percent from last year's May 1, stocks and are the lowest May 1 stocks since 1989 when there were 307,000 tons on hand. Farmers and ranchers had only 17 percent of their 1994 production on hand May 1, 1995. Disappearance in the December 1 1994-May 1,1995 period amounted to nearly 3.2 million tons, unchanged from last season.

Nationally, haystocks on farms totaled 20.8 million tons on May 1, 1995, down 6 percent from the previous year. Disappearance of hay from December 1, 1994 - May 1, 1995, period totaled 83.6 million tons, 6 percent higher than the 1993 crop disappearance of 78.9 million tons for the same period one year earlier.

1/ District data funded by the Montana Wheat & Barley Committee.

MAY 1 PASTURE AND RANGE FEED CONDITION

Montana pasture and range feed condition ratings on May 1 were: 1 % very poor, 21% poor, 35% fair, 41% good and 2% excellent. Cool temperatures along with dry conditions last fall and early spring has delayed growth of forage grasses. The North Central and the Southwest areas pastures are in mostly poor to fair condition while fair to good condition reports were common elsewhere.

Reporters of range and pasture feed conditions are asked to rate the percentage of the pastures that fall into the each of the following categories:

- **Very poor** - pastures and/or ranges are providing very little or no feed for the current time of the year. Supplemental feeding is required to maintain livestock.
- **Poor** - pastures and/or ranges are providing marginal feed for the current time of the year. Some supplemental feeding is required.
- **Fair** - pastures and/or ranges are providing adequate feed but less than the normal amount expected for the current time of the year.
- **Good** - pastures and/or ranges are providing the normal amount of feed for the current time of the year.
- **Excellent** - pastures and/or ranges are providing feed in excess of what is normally expected for the current time of the year.

APRIL 1, 1995, SHEEP AND LAMB INVENTORY TOTALS 9.91 MILLION HEAD

All sheep and lamb inventory in the United States on April 1, 1995, totaled 9.91 million head, 11 percent above January 1, 1995. Since this is the first April 1 sheep inventory report, comparisons to last year are not available. Total breeding sheep and lambs inventory of 6.28 million head was 2 percent below January 1995. Market sheep and lambs inventory (including newborns) were 48 percent above January 1995.

Of the April 1 breeding herd, 5.19 million head were ewes one year old and older, 265,000 head were rams, and 830,000 head were replacement lambs (including newborn lambs).

Of the total market lambs (including newborn lambs), 66.4 percent were under 65 pounds, 9.5 percent were 65 to 84 pounds, 11.2 percent were 85 to 105 pounds, and the remainder, 12.9 percent, were over 105 pounds on April 1.

1994 DAIRY PRODUCTS HIGHLIGHTS

Montana dairy plants produced 1.1 million pounds of butter in 1994. Creamed cottage cheese production amounted to 3.9 million pounds, while cottage cheese curd production totaled 1.4 million pounds.

Total ice milk production by Montana plants at 1.03 million gallons decreased 3 percent from 1993. Hard ice milk dropped 16 percent from last year at 127 thousand gallons, and soft ice milk was down less than one percent at 901 thousand gallons. Plants used a total of 628 thousand gallons of ice milk mix in 1994 compared with 688 thousand gallons in 1993.

United States butter production during 1994 totaled 1.30 billion pounds, 1 percent less than 1993. California accounted for 27 percent of the production, followed by Wisconsin with 23 percent and Washington with 9 percent.

Total cheese production, excluding cottage cheeses, was 6.73 billion pounds, 3 percent above the 1993 production. Wisconsin was the leading State with 30 percent of the production. American type cheese production, at 2.98 billion pounds, was 1 percent above 1993 and accounted for 44 percent of total cheese produced in 1994.

Italian varieties, at 2.62 billion pounds produced, were 5 percent above the 1993 production. Mozzarella accounted for 79 percent of the Italian production followed by Ricotta with 9 percent and Provolone with 7 percent. Wisconsin was the leading State in Italian cheese production with 31 percent of the production.

Creamed cottage cheese, at 410 million pounds, was down 5 percent from 1993. Lowfat cottage cheese, at 321 million pounds, was up 1 percent.

Ice cream production totaled 876 million gallons, up 1 percent from 1993. Ice milk, at 360 million gallons, was up 11 percent. Milk sherbet, at 54.8 million gallons, was up 8 percent. Frozen yogurt production, at 151 million gallons, was up 1 percent. The 285 million gallons of soft products (ice cream, ice milk, and sherbet) made during 1994 accounted for 22 percent of the total frozen dairy products, excluding yogurt. Soft frozen dairy products are sold from direct-serve soft freezer and milk shake machines.

POULTRY VALUE OF PRODUCTION AND SALES

Montana 1994 egg sales dropped from a year ago due to lower production and decreased average prices. Egg production decreased 24 percent while the average price per dozen of eggs went down 13 percent. Montana's egg production, at 95 million eggs, is the lowest on record. These factors in turn combine to produce a record low value of production of $4.4 million. (continued on the back page)

PRICES RECEIVED

Montana crop prices for the full month of March were a mixed bag. Durum wheat increased 10 cents to $4.86 per bushel. Spring wheat remained unchanged at $3.55 per bushel, while winter wheat decreased 10 cents to $3.49. Alfalfa hay prices, at $71.00 per ton, decreased $2.00 from February, while other hay prices, at $59.00 per ton, fell $6.00. Feed barley increased 3 cents to $1.91 per bushel, and malt barley dropped 32 cents to $2.52 per bushel. At $1.30, oats averaged 1 cent below the previous month. The all wheat price for mid-April averaged $3.68 per bushel, while the all barley price was $2.17.

Livestock prices for the full month of March were lower compared with the previous month except for cows. Cow prices were up 20 cents to $43.50 per cwt, while the average price for steers and heifers decreased $3.50 to $70.30 per cwt. Calf prices dropped $2.90 to $79.60 per cwt. Prices received for sheep averaged $7.00 below last month at $26.80. Lamb prices slipped 60 cents to $72.60 per cwt. Milk prices increased 10 cents to $13.40 per cwt. Steer and heifer prices for mid-April averaged $67.30 per cwt.

Nationally, steer and heifer prices averaged $70.20 per cwt for the full month of March. Cow prices came in at $39.90 and hogs were $37.80 per cwt. The U.S. all wheat price was $3.53 per bushel and $2.06 per bushel for all barley. Egg prices were 61.4 cents per dozen.

The All Farm Products Index of Prices Received in April was 103 based on 1990-92=100, up 3 points (3.0 percent) from March. Price gains from March for vegetables, (sharp increases for lettuce, onions, and asparagus) and oranges more than offset price declines for cattle, hogs, strawberries, and broilers. The seasonal changes in the mix of commodities farmers sell also can affect the overall index level, but these changes were offsetting in April. Higher relative seasonal marketings of cattle, milk, and several fruit and vegetable items offset the effect of relatively lower seasonal marketings of soybeans, cotton, corn, and wheat.

Compared with April 1994, the All Farm Products Index was 1 point (1.0 percent) higher. Sharply higher prices for lettuce, tomatoes, cotton, and onions compared with April 1994 levels offset lower prices for cattle, hogs, corn and soybeans. Although year to year price changes were offsetting, a relative increase in annual vegetable and poultry weights used to calculate 1995 indexes resulted in a slightly higher overall index.

UNITED STATES INDEX SUMMARY

INDEX 1990-92=100	Mar. 1994	Apr. 1994	Mar. 1995	Apr. 1995
Prices Received	105	102	100	103
Prices Paid, Interest, Taxes, & Farm Wage Rates	2/106	107	3/108	108

POULTRY PRODUCTION AND VALUE (continued)

Montana's value of sales from chickens, excluding broilers, in 1994 decreased by 2 cents per pound and pounds sold decreased 15 percent. This resulted in the value of chicken sales being less than half of the previous year.

The combined value of U.S. production from broilers, eggs, and turkeys and the value of sales from chickens in 1994, was $17.9 billion, up 6 percent from the $16.8 billion in 1993. Of the combined total, 64 percent was from broilers, 21 percent from eggs, 15 percent from turkeys, and less than 1 percent from other chickens.

The value of broilers produced during 1994 was $11.4 billion, up 9 percent from the $10.4 billion in 1993. The total number of broilers produced in 1994 was 7.02 billion, up 5 percent from 1993. The 1994 average price per pound on a live weight equivalent basis was 35.0 cents per pound, compared with 34.0 cents per pound in 1993.

The value of turkeys produced during 1994 was $2.67 billion, up 6 percent from the $2.51 billion the previous year. Turkey production in 1994 totaled 6.61 billion pounds live weight, compared with 6.43 billion pounds in 1993. The average price received by producers during 1994 was 40.4 cents per pound, compared with 39.0 cents in 1993.

1994 MEAT ANIMAL PRODUCTION, DISPOSITION, AND INCOME

Cash receipts from the marketing of cattle, sheep, and hogs in Montana totaled $793 million, down 10 percent from 1993. Cattle and calf cash receipts of $737 million also decreased 10 percent. Cattle marketings totaled 1.17 million head, down 5 percent, while calf marketings were up 16 percent to 260,000 head. The average price received for cattle decreased $4.00 to $71.60 per cwt., and calf prices decreased $13.70 to $83.30 per cwt.

Hog and pig cash receipts dropped 22 percent from 1993 to $32 million. Hog marketings, at 346,000 head, were down 8 percent from 1993, while average prices dropped $6.50 per cwt. to $37.60. Sheep and lamb cash receipts dropped 4 percent to $24 million with 105,000 sheep and 345,000 lambs being marketed in 1994. Average prices received for sheep rose $2.40 per cwt. to $29.20 and lambs increased $1.90 per cwt. to $67.10.

The U.S. 1994 gross income from cattle and calves, hogs and pigs, and sheep and lambs totaled $47.2 billion, down 8 percent from 1993. Gross income declined for all three species. Hogs and pigs, at 10 percent below 1993, posted the largest decline. Gross income from cattle and sheep fell 7 percent each.

Total U.S. 1994 cash receipts from marketings of meat animals fell 8 percent to $46.8 billion. Cattle and calves accounted for 78 percent of this total, hogs and pigs 21 percent, and sheep and lambs 1 percent. For both cattle and hogs, production increases were more than offset by a drop in average prices. For sheep, lower production reduced cash receipts in spite of higher prices.

Cash receipts from marketings of cattle and calves decreased from $39.4 billion in 1993 to $36.4 in 1994, a 7 percent decline. All cattle and calf marketings totaled 54.2 billion pounds in 1994, up 2 percent from the 53.0 billion pounds in 1993. The U.S. annual average price per 100 pounds live weight for cattle was $66.70, a decline of $5.90 from the $72.60 in 1993. For calves, the annual average price fell $4.00 to $87.20.

Cash receipts from hogs and pigs totaled $9.86 billion in 1994, down 10 percent from 1993. Marketings increased to 24.5 billion pounds in 1994, 2 percent above the previous year. However, the U.S. annual average price per 100 pounds live weight dropped from $45.20 in 1993 to $39.90 in 1994.

Cash receipts from marketings of sheep and lambs in 1994 were $506 million, down 7 percent from 1993. Marketings declined 10 percent to 883 million pounds. The U.S. annual average price per 100 pounds live weight for lambs increased from $64.40 in 1993 to $65.60 in 1994. The sheep annual average price increased $2.30 to $30.90.

MARCH RED MEAT PRODUCTION

Montana slaughter plants produced 1.33 million pounds, dressed weight, of red meat during March 1995, down marginally from last month and down 15 percent from a year earlier. There were 1,500 head of cattle slaughtered in Montana with an average weight of 1,188 pounds, compared with 1,900 head slaughtered during the same time period last year with an average live weight of 1,186 pounds. The total live weight of 1.77 million pounds decreased 20 percent from a year ago.

The number of hogs slaughtered by Montana plants, at 2,200 head, was down 100 head from this time a year ago, however, the average live weight increased 4 pounds to 247 pounds. Sheep slaughter was unchanged from a year ago at 200 head.

Commercial red meat production for the United States totaled 3.75 billion pounds during March, 4 percent above last year. Beef production totaled 2.06 billion pounds, up 3 percent from a year earlier. Head kill totaled 2.95 million, up 3 percent from a year earlier. The average live weight at 1,176 pounds was down 6 pounds from last year.

MARCH RED MEAT PRODUCTION (continued from Page 1)

Veal production totaled 27.0 million pounds, up 5 percent from a year ago. Calf slaughter totaled 120,500, up percent from a year earlier. The average live weight rose 1 pound to 386 pounds. Pork production, at 1.63 billion pounds, was up 7 percent from a year earlier and slightly above the previous all-time high set in October 1992. Hog kill totaled 8.81 million head, 6 percent above March 1994. The average live weight increased 2 pounds to 256 pounds. Lamb and mutton production, at 30.0 million pounds, was down 12 percent from March 1994. Slaughter totaled 468,200 head, down 12 percent from a year earlier. The average live weight was down 1 pound to 130 pounds.

January-March red meat production was 10.5 billion pounds, up 4 percent from the comparable period a year ago. Accumulated beef production was up 2 percent, veal jumped 11 percent, pork rose 7 percent, but lamb and mutton dropped 9 percent.

MILK PRODUCTION

Montana's dairy farms produced 79 million pounds of milk during the January-March period, up 10 percent from the previous year. There were 21,000 milk cows on Montana farms during the quarter, the same as 1994. The amount of grain and concentrates fed to milk cows mounted to 17.1 pounds per cow, up 0.6 of a pound from a year ago. The value of those grains and concentrates fed decreased 25 cents to $7.30 per hundredweight.

Milk production in the 22 major States during March totaled 11.8 billion pounds, 4 percent above production in these same States in March 1994. February revised production, at 10.4 billion pounds, was 5 percent more than February 1994. Production per cow in the 22 major States averaged 1,454 pounds for March, 53 pounds above March 1994.

The number of cows on farms in the 22 major States was 8.11 million head, 34,000 head more than March 1994 and 20,000 head more than February 1995.

During the January-March period, the 22 major States produced 33.5 billion pounds of milk, 85.8 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 13.1 billion pounds for January 1995, 12.2 billion pounds for February 1995, and 13.8 billions pounds for March 1995.

The quarterly production of milk for the U.S. was 39.1 billion pounds, 4 percent above the January-March period last year. The average number of milk cows in the U.S. during the January-March quarter was 9.52 million head, 12,000 head more than the same period last year.

Grain and other concentrates fed to milk cows on April 1. 1995, averaged 18.6 pounds per cow, 0.4 of a pound less than on April 1, 1994. The value of grain and other concentrates fed to cows on April 1 averaged $7.57 per hundredweight, $0.66 less than the price a year earlier.

APRIL 1 POTATO STOCKS

Montana's April 1, 1995 potato stocks totaled 1.95 million cwt, up 10 percent from the same period a year ago. The percentage of 1994's total potato production that was still being stored on April 1 was 61 percent compared with 66 percent last year.

U.S. potato stocks totaled 123 million cwt on April 1, 1995, up 6 percent from both last year and two years ago. April stocks were 31 percent of fall potato production in the 15 storage States, the same as a year ago. Disappearance for the season is a record high 277 million cwt of potatoes, 7 percent above last year and 10 percent above 1993. Shrink and loss of 28.7 million cwt was 7 percent above a year ago. Processors used a record high 134 million cwt of potatoes, up 8 percent from last year. March processing totaled 18.1 million cwt of potatoes, up 4 percent from a year earlier.

Western States potato stocks totaled 96.3 million cwt in the six States, up 4 percent from last year and 12 percent above two years ago. Idaho's stocks were down 3 percent, while Colorado was up 1 percent from last year. Washington's stocks of 23.5 million cwt, were up 18 percent and Oregon's stocks jumped 15 percent. California's stocks were up 6 percent from a year ago.

MARCH EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 6.45 billion during March 1995, up 2 percent from the 6.32 billion produced March 1994. Production included 5.49 billion table eggs and 958 million hatching egg type, of which 892 million were broiler-type and 66.0 million were egg-type. The total number of layers during March 1995 averaged 295 million, up 2 percent from the 291 million during March 1994. March egg production per 100 layers was 2,183 eggs, compared with 2,174 in March 1994.

All layers in the U.S. on April 1, 1995, totaled 294 million, compared with 291 million a year ago. The 294 million layers consisted of 242 million layers producing table or commercial type eggs, 49.4 million layers producing broiler-type hatching eggs, and 2.94 million layers producing egg-type hatching eggs. Rate of lay per day on April 1, 1995, averaged 71.0 eggs per 100 layers, up 1 percent from the 70.6 eggs a year ago.

CATTLE ON FEED VIRTUALLY UNCHANGED IN 13 QUARTERLY STATES

Cattle and calves on feed for slaughter market in the 13 States preparing quarterly estimates totaled 10.7 million head, virtually unchanged from a year ago but 1 percent above April 1, 1993. The inventory included 6.98 million steers and steer calves, down 3 percent from a year ago but 1 percent above two years ago. This group accounts for 65.3 percent of the total inventory. Heifers and heifer calves accounted for 3.65 million head, 5 percent above a year ago.

Placements of cattle and calves on feed in the 13 States during the January-March 1995 quarter totaled 5.91 million, 10 percent above last year and 11 percent above January-March 1993.

Net placements of 5.63 million for January-March were 10 percent above last year and 15 percent above January-March 1993. Marketings of fed cattle during the January-March 1995 quarter totaled 5.55 million, virtually unchanged from the same quarter last year but 4 percent above two years ago.

Other disappearance totaled 287,000 head compared to 275,000 in January-March 1994 and 439,000 in January-March 1993.

1995 PROSPECTIVE PLANTINGS

Montana producers intend to plant 5.86 million acres of wheat this year, five percent more than a year ago. Winter wheat acreage planted is estimated at 1.7 million acres, unchanged from the December 1 estimate. Dry weather last fall held many producers back from planting winter wheat, causing the smallest winter wheat crop since 1970. This year's crop is down 13 percent from 1994. What was lost in winter wheat acreage was made up with spring wheat.

Farmers intend to plant 3.9 million acres of spring wheat this year compared with 3.45 million acres a year ago. If realized this will be 13 percent above a year ago and the largest spring wheat crop since 1953. Stronger durum wheat prices are contributing to producers' plans to increase durum acreage by 44 percent this year. Durum wheat planting intentions are estimated at 260,000 acres compared with 180,000 acres last year.

The increase in all wheat acreage was offset by a decrease in barley intentions. Barley planting intentions of 1.2 million acres are off 100,000 acres from a year ago. Oats also showed a decrease from a year ago. Current intentions are to plant 130,000 acres and harvest 65,000 acres, down 7 percent and 13 percent, respectively.

Dry edible bean acreage is estimated at 13,000 acres up 27 percent from last year. Sugar beet acreage is expected to increase by 2 percent and total 55,500 acres. All hay harvested acres are estimated at 2.25 million acres, up 2 percent from 1994.

At the U.S. level, all wheat acreage is estimated at 70.9 million acres, up 1 percent from a year ago. This increase is almost all due to an increase in durum wheat acreage. Winter wheat seedings for 1995 are 49.3 million acres, down 1 percent from previously published estimate, but virtually unchanged from 1994. Other spring wheat planting intentions are 18.4 million acres, slightly above last year's realized acres. Durum wheat intentions for this year total 3.29 million acres, up 15 percent from 1994.

Barley is estimated at 7.04 million acres, down 2 percent from last year. If realized, this will be the smallest barley acreage planted since barley planted estimates started in 1926. Oat producers plan to seed or have seeded a total of 6.75 million acres of oats for 1995, up 2 percent from the 6.64 million acres seeded for 1994. Growers intend to harvest 3.65 million acres of oats for grain in 1995, down 9 percent from the 4.02 million acres harvested in 1994. If producers follow through with these intentions, this would be the least oat acreage harvested for grain since estimates were first made in 1866. Corn growers intend to plant 75.3 million acres of corn for all purposes in 1995, down 5 percent from last year but 3 percent above 1993.

Dry bean farmers intend to plant 2.08 million acres of dry beans in 1995, up 2 percent from last year. Area planted to sugar beets for 1995 is expected to total 14.5 million acres in the 14 producing states. If growers intentions are realized, planted acreage will be 2 percent below last year. Producers expect to harvest 59.0 million acres of all hay in 1995, 234,000 acres more than were harvested in 1994.

PRICES RECEIVED

Montana crop prices for the full month of February were higher than the previous month, except for spring wheat dropping 12 cents to 3.55 per bushel, and alfalfa hay remaining at $73.00 per ton. Other hay increased $1.00 to $65.00 per ton. Barley went up a penny to $2.26 per bushel, and oats averaged 11 cents higher at $1.31 per bushel. Durum wheat also climbed 11 cents to $4.76 per bushel. Winter wheat prices rose 3 cents from the previous month to $3.59 per bushel. Mid-month March prices for all wheat averaged $3.63 per bushel. Barley producers saw a 7-cent increase to $2.33 per bushel in mid-March.

Montana livestock prices were mixed for the full month of February. Steer and heifer prices dropped $2.00 to $73.80 per cwt, and mid-March prices averaged $2.70 lower. Cow prices in the state fared better, increasing 40 cents to $43.30 per cwt for the full month of February. Calf prices averaged 50 cents lower at $82.50 per cwt. Prices received for sheep increased $3.20 to $33.80, and lambs went up $5.90 to $73.20 per cwt. Milk prices decreased 40 cents to $13.30 per cwt.

At the national level, steer and heifer prices averaged $72.20 per cwt for the full month of February. Cow prices came in at $41.50 and hogs were $39.10 per cwt. The U.S. all wheat price was $3.62 per bushel with $2.10 per bushel for all barley. Egg prices were 62 cents per dozen.

The U.S. All Farm Products Index of Prices Received in March was 98 based on 1990-92=100, unchanged from February. Price gains from February for vegetables (lettuce, broccoli, and cauliflower), oranges, corn, and soybeans offset price declines for cattle, hogs, and wheat. However, the seasonal changes in the mix of commodities farmers sell also affects the overall index level. Lower relative seasonal marketings of cattle, cotton, corn, and oranges offset the affect of relatively higher seasonal marketings of milk, strawberries, asparagus, and tomatoes resulting in no change to the overall index.

Compared with March 1994, the All Farm Products Index was 7 points (6.7 percent) lower. Price decreases from March 1994 for cattle, corn, soybeans, hogs, and milk more than offset price increases for cotton and vegetables (broccoli, lettuce, and celery).

UNITED STATES INDEX SUMMARY

INDEX 1990-92=100	Feb. 1994	Mar. 1994	Feb. 1995	Mar. 1995

U.S. HOG AMD PIG INVENTORY UP 2 PERCENT

U.S. inventory of all hogs and pigs on March 1, 1995, was a record high 58.4 million head. This was 2 percent above March 1994, but 3 percent below the December 1, 1994, inventory. The previous record high March inventory was in 1994. Montana hog and pig numbers are published in December only.

Breeding inventory, at 6.99 million head, was down 3 percent from March 1, 1994, and down 1 percent from the previous quarter. Market hog inventory, at 51.4 million head, was 3 percent above March 1, 1994, but 3 percent below December 1, 1994.

The December 1994-February 1995 U.S. pig crop was a record high 23.7 million head, 2 percent more than 1994 and up 4 percent from the same period in 1993. Sows farrowing during this period totaled 2.87 million head, down slightly from last year, but 2 percent above two years ago. Pigs saved per litter were a record high 8.27 compared with 8.10 during the same period a year ago.

U.S. hog producers intend to have 3.21 million sows farrow during the March-May 1995 quarter, 5 percent less than the actual farrowings during the same period last year and down slightly from 1993. Intended farrowings for June-August 1995, at 3.02 million sows, are down 3 percent from 1994, but up 2 percent from the 1993 period.

1994 RED MEAT PRODUCTION

Montana slaughter plants produced 19.9 million pounds, dressed weight, of red meat during 1994, compared with 17.3 million pounds in 1993. There were 22,400 cattle slaughtered during 1994, up 18 percent from a year earlier. The total live weight of 26.9 million pounds was 17 percent higher than 1993, but the average live weight of 1,199 pounds was down 5 pounds from last year.

There were 31,200 hogs slaughtered in Montana, an increase of 2,000 head from 1993. Total live weight of 7.6 million pounds was up 12 percent, and the average live weight was 244 pounds per head compared with 234 pounds in 1993. Sheep slaughter amounted to 4,000 head, an increase of 400 head from last year. The average live weight decreased 2 pounds from the previous year to 115 pounds. Total live weight of all sheep and lambs slaughtered in 1994 increased 8 percent to 464,000 pounds.

Red meat production in commercial plants and on farms for the **United States** during 1994 totaled 42.7 billion pounds, 5 percent above 1993 and 4 percent above the previous high set in 1992. Red meat includes beef, veal, pork, and lamb and mutton slaughter. Red meat production in commercial plants totaled 42.5 billion pounds.

Beef production was 24.4 billion pounds, up 6 percent from 1993. Veal production was 293 million pounds, up 2 percent. Pork production, at 17.7 billion pounds, rose 4 percent from 1993 and 3 percent above the previous record set in 1992. Lamb and mutton production totaled 310 million pounds, down 8 percent from 1993.

Commercial cattle slaughter during 1994 totaled 34.2 million head, up 3 percent from 1993, with federal inspection comprising 97.9 percent of the total compared with 97.8 percent last year. The average live weight was 1,189 pounds, up 28 pounds. Steers comprised 52.7 percent of the total federally inspected slaughter, heifers 28.0 percent, dairy cows comprised 8.5 percent, and beef cows 8.8 percent. Commercial calf slaughter, at 1.27 million head, was up 6 percent from the previous year with 97.5 percent under federal inspection. Average live weight was 383 pounds, down 5 pounds from 1993.

Commercial hog slaughter totaled 95.7 million head, up 3 percent from 1993 with federal inspection comprising 97.6 percent. Average live weight rose 1 pound to 255 pounds. Barrows and gilts were 94.8 percent of the total. Commercial sheep and lamb slaughter, at 4.94 million head, was down 5 percent from 1993 with federal inspection comprising 96.3 percent. Average live weight was 125 pounds, compared with 127 pounds last year. Lambs were 93.9 percent of the total.

FEBRUARY RED MEAT PRODUCTION

Montana slaughter plants produced 1.3 million pounds, dressed weight, of red meat during February 1995, a decrease of 20 percent from last month, but 8 percent above a year ago. There were 1,600 head of cattle slaughtered in February, compared with 1,400 head last year. The total live weight was 1.8 million pounds with an average live weight of 1,167 pounds. The total live weight increased 11 percent from last year, and the average live weight was 9 pounds more than a year ago.

Hog slaughter amounted to 2,100 head, the same as last year, with a total live weight of 506 thousand pounds, 2 percent below 1994. Average live weight was 246, compared with 249 in February 1994. The number of sheep slaughtered in February 1995 dropped 100 head from February 1994, to 100 head. The average live weight was 116 pounds compared with 124 pounds a year ago, and the total live weight at 16 thousand pounds dropped 33 percent from 1994.

Commercial red meat production for the United States totaled 3.21 billion pounds during February, 3 percent above last year. Beef production totaled 1.81 billion pounds, slightly above a year ago. Head kill totaled 2.58 million, up 1 percent from last year. The average live weight, at 1,184 pounds, was down 2 pounds.

Veal production totaled 24.0 million pounds, up 9 percent from a year earlier. Calf slaughter totaled 106,000 head, up 10 percent from last year. The average live weight was down 1 pound to 383 pounds. Pork production, at 1.35 billion pounds, was up 6 percent from last year and 2 percent above the previous February high set in 1992. Hog kill totaled 7.33 million head, 5 percent above a year ago. The average live weight increased 2 pounds to 255 pounds.

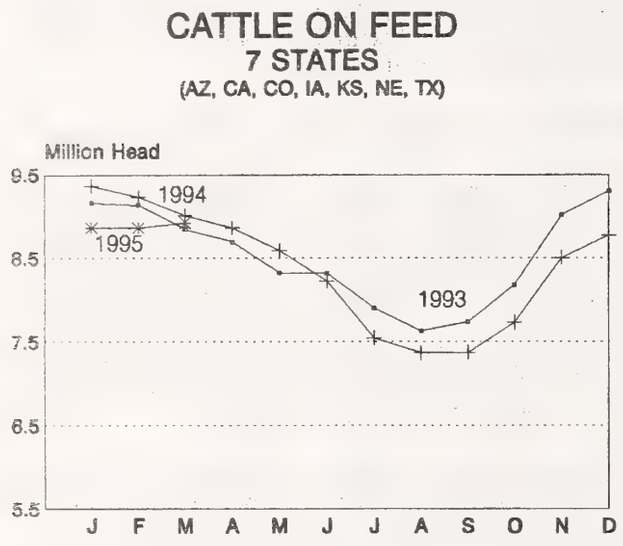
Lamb and mutton production, at 24.0 million pounds, was down 11 percent from a year ago. Slaughter totaled 375,400 head, down 10 percent from a year earlier. The average live weight was down 1 pound to 128 pounds.

CATTLE ON FEED DOWN 1 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 8.93 million head, down 1 percent from a year ago, but up 1 percent from March 1, 1993.

Placements in feedlots during February totaled 1.61 million, 19 percent above 1994 and 27 percent above 1993. **Net placements** of 1.54 million for February were up 20 percent from last year and 34 percent above 1993. This is the largest February placements since 1989.

Marketings during February totaled 1.48 million, down 1 percent from a year ago, but 3 percent above 1993. **Other disappearance** during February was 66,000 head, 13 percent below last year and 40 percent below 1993.



FEBRUARY MILK PRODUCTION

Milk production in the 22 major States during February totaled 10.4 billion pounds, 4 percent above production in these same States in February 1994. January revised production, at 11.3 billion pounds, was 4 percent more than January 1994.

Production per cow in the 22 major States averaged 1,287 pounds for February, 51 pounds above February 1994. The number of cows on farms in the 22 major States was 8.09 million head, 7,000 head more than February 1994 but 1,000 head less than January 1995.

During the October-December period, the 22 major States produced 32.7 billion pounds of milk, 86.2 percent of the U.S. production. If the remaining 28 States not surveyed monthly followed the same pattern as the 22 States, the U.S. production would be 12.1 billion pounds for February 1995.

MARCH 1 POTATO STOCKS

Montana producers stored 2.73 million cwt of potatoes on March 1, 1995, compared with 2.37 million cwt a year ago. The March 1 stocks represent 85 percent of production from the 1994 crop, compared with 88 percent a year earlier.

U.S. potato stocks totaled 163 million cwt on March 1, 1995, up 6 percent from last year and 7 percent above two years ago. Stocks now are 41 percent of fall potato production in the 15 storage States, the same as last year. Disappearance to date for the season was a record 237 million cwt, 7 percent above last year and 10 percent above two years ago. Processors used 116 million cwt, up 9 percent.

Western States held 123 million cwt of potatoes in storage on March 1, 1995, up 3 percent from last year and 12 percent above two years ago. Idaho's stocks were off 3 percent and accounted for over half of the Western total. Oregon's stocks were up 7 percent and Washington was 15 percent above a year earlier. Colorado's stocks were up 3 percent from last year and California's storage was up 5 percent.

1994 U.S. WOOL PRODUCTION DOWN 11 PERCENT

Montana wool growers produced 5.1 million pounds of wool during 1994, down 8 percent from 1993. The 1994 average price per pound of wool increased 32 cents to 86 cents per pound. This resulted in the total value of Montana wool produced coming in at $4.4 million, a 46 percent increase over the previous year. The total head shorn decreased 7 percent to 533,000. The average fleece weight slipped one-tenth of a pound to 9.6 pounds.

Shorn wool production in the United States during 1994 was 68.6 million pounds, down 11 percent from 1993. Sheep and lambs shorn totaled 8.88 million head, also a decrease of 11 percent from 1993. The average price paid for wool sold in 1994 was 78 cents per pound for a total value of $52.4 million, up 34 percent from $39.1 million in 1993.

MONTANA 1994 SHEEP AND LAMB LOSSES

Montana sheep and lamb producers lost 104,000 animals to weather, predators, disease and other causes during 1994, representing a total value of $4.9 million. The total number of sheep and lambs lost was down 4 percent from 1993 and the total value of inventory lost in 1994 dropped 3 percent. The decline in sheep and lamb losses is partly due to the drop in total inventory which is down 6 percent from the previous year. Sheep and lamb deaths amounted to 10.1 percent of the January 1 inventory and lambs born, up fractionally from the previous year.

Predators caused an estimated $1.9 million in losses in 1994 up from $1.8 million the previous year. Losses due to predators amounted to 4.2 percent of the January 1 inventory and lambs born and 41 percent of all sheep and lamb deaths. Coyotes remained the largest predator and the largest cause of all deaths. The value of losses attributed to coyotes was $1.3 million. The number of sheep and lambs lost to all predators totaled 42,900 head, up 2,700 head from last year. Coyotes accounted for 27 percent of all death losses in the state and 66 percent of all predator losses. Lamb losses by all predators amounted to 36,300 head, up 13 percent from last year. Most of the increase in lamb losses was due to an increase in fox and eagle losses. Lambs lost to eagles jumped 2,900 head while fox losses rose 2,700 head. The number of sheep lost to all predators totaled 6,600, down 18 percent. Coyotes caused the most sheep losses at 5,000 head.

The total value of non-predatory losses was $2.6 million in 1994 down from $2.9 million the previous year. Non-predatory losses accounted for 52 percent of all losses, down 3 points from 1993. There were 35,000 lambs lost to weather, disease and other non-predatory causes in 1994, down 3 percent from the previous year. The largest causes of lambs losses were weather and lambing complications, 9,900 head and 9,300 head, respectively. Sheep losses to non-predatory factors totaled 18,800, 19 percent decrease from 1993. Sheep lost to old age continued to be the largest non-predatory cause at 6,500 head, down 600 head from the previous year.

The value of sheep and lambs lost to unknown causes dropped 8 percent from last year to $.4 million. Lambs lost to unknown causes were down 1,000 head to 3,700. Unknown causes claimed 3,600 sheep, down 100 head from last year.

FEBRUARY EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 5.72 billion during February 1995, up 2 percent from the 5.60 billion produced February 1994. Production included 4.86 billion table eggs and 864 million hatching egg type, of which 804 million were broiler-type and 60.0 million were egg-type. The total number of layers during February 1995 averaged 296 million, up 2 percent from the 290 million during February 1994. February egg production per 100 layers was 1,929 eggs, compared with 1,930 in February 1994.

All layers in the U.S. on March 1, 1995, totaled 296 million, compared with 290 million a year ago. The 296 million layers consisted of 244 million layers producing table or commercial type eggs, 49.2 million layers producing broiler-type hatching eggs, and 2.82 million layers producing egg-type hatching eggs. Rate of lay per day on March 1, 1995, averaged 69.6 eggs per 100 layers, the same as a year ago.

Laying flocks in the 30 major egg production States produced 5.40 billion eggs during February, up 2 percent from February 1994. The average number of layers during February, at 280 million, was also up 2 percent from the year earlier.

MONTANA WHEAT & BARLEY MOVEMENT

Wheat shipped to out-of-state destinations during June-November 1994, at 80.6 million bushels, was 27 percent above the same period last year.

Shipments to western destinations (primarily export facilities of Washington and Oregon) were 27 percent above the previous June-November period. Wheat movement to eastern destinations was up 50 percent. Shipments to other destinations (primarily Colorado and Arizona) were down 49 percent.

Rail movement amounted to 76.9 million bushels, up from 59.0 million shipped by rail during the same period in 1993. Trucks carried 3.6 million bushels compared with 4.6 million the previous June-November period.

Montana barley shipped to out-of-state destinations in June-November 1994 was 19.0 million bushels, up 55 percent from the same period last year.

Barley shipped west amounted to 15.2 million bushels, up 48 percent from the 10.3 million bushels in the June-November 1993 period. Eastern shipments totalled 2.1 million bushels, up 18 percent from the 1.7 million bushels the previous year.

Movement to other destinations, totalling 1.7 million bushels, was up 595 percent from the same period last year.

[1] Counties with less than 500 acres planted of one class of wheat are combined into "other" counties to avoid disclosure of individual information.

[2] Planted acres less winter wheat acres replanted to spring wheat.

PRICES RECEIVED

Montana crop prices for the full month of January were a mixed bag. Spring wheat increased 5 cents to $3.67 per bushel. Durum wheat declined 64 cents to $4.65 per bushel and winter wheat fell 7 cents to $3.56. Alfalfa hay prices, at $73.00 per ton, decreased $1.00 from December, while other hay prices, at $64.00 per ton, rose $1.00. Feed barley increased 5 cents to $1.88 per bushel, and malt barley dropped 6 cents to $2.84 per bushel. At $1.20, oats averaged 4 cents above the previous month. The all wheat price for mid-February averaged $3.61 per bushel while the all barley price was $2.16.

Livestock prices for the full month of January were higher compared with the previous month, except for sheep. Cow prices were up $4.80 to $42.90 per cwt, while the average price for steers and heifers increased 30 cents to $75.80 per cwt. Calf prices climbed $3.80 to $83.00 per cwt. Prices received for sheep averaged $2.50 below last month at $30.60. Lamb prices were up 40 cents to $67.30 per cwt. Milk prices remained the same at $13.70 per cwt. Steer and heifer prices for mid-February averaged $73.80 per cwt.

Nationally, steer and heifer prices averaged $71.50 per cwt for the full month of January. Cow prices came in at $38.80 and hogs were $36.90 per cwt. The U.S. all wheat price was $3.69 per bushel and $2.05 per bushel for all barley. Egg prices were 62.0 cents per dozen.

The All Farm Products Index of Prices Received in February was 98 based on 1990-92=100, unchanged from January. Price gains from January for cattle, hogs, tomatoes, and corn offset price declines for wheat, soybeans, lettuce, and lemons. However, the seasonal changes in the mix of commodities farmers sell also affects the overall index level. Lower relative seasonal marketings of corn, soybeans, cotton, and tobacco offset the affect of relatively higher seasonal marketings for cattle, milk, hogs, and broilers resulting in no change to the overall index.

Compared with February 1994, the All Farm Products Index was 6 points (5.8 percent) lower. Price decreases from February 1994 for corn, soybeans, hogs, and milk more than offset price increases for cotton, tomatoes, strawberries, and celery.

UNITED STATES INDEX SUMMARY

INDEX 1990-92=100	Jan. 1994	Feb. 1994	Jan. 1995	Feb. 1995

1994 ALFALFA SEED PRODUCTION

Montana alfalfa seed producers harvested 5.85 million pounds of seed in 1994, nearly five times the previous year's production. Proprietary varieties made up 42 percent of this year's production, 51 percent was common uncertified varieties, and 7 percent certified public varieties.

The 1994 alfalfa seed yield per acre was 375 pounds, up from the 1993 yield of 160 pounds. There were 15,000 acres for harvest in 1994, twice last year's total. The average price received for the 1994 crop was 91 cents per pound, down 6 cents from the average price of the 1993 crop.

JANUARY 1 CATTLE AND CALF INVENTORY

Montana's January 1, 1995 cattle and calf inventory, at 2.7 million head, increased 6 percent from a year ago. The value of Montana's cattle and calf inventory dropped 8 percent from 1994 to 1.82 billion dollars. Poor prices received for cattle during the year had a significant impact on cattle and calf values. Average value per head in the 1995 inventory fell 105 dollars from a year ago to 675 dollars, the lowest average value since 1990. The 1994 calf crop totaled 1.52 million head, up 6 percent from the 1993 calf crop.

Beef cow numbers, at 1.589 million head, increased 8 percent from last year, while beef cow replacements were equal to a year ago at 355,000 head. Milk cow numbers continued a 3-year decline as numbers dropped 1,000 head to 21,000. Milk cow replacements also dropped 1,000 head to 7,000 head.

Other heifers weighing 500 pounds or more rose 6 percent from a year ago to 222,000 head, while steers weighing 500 pounds or more dropped 2 percent to 260,0000 head. Calves showed the biggest increase of any inventory class jumping 20 percent from last year to 150,000 head, but were down from 180,000 head two years ago. The number of bulls increased 9 percent to 96,000 head.

All cattle and calves in the United States as of January 1, 1995, totaled 103.3 million head, 2 percent above the revised 101.0 million on January 1, 1994, and 4 percent above the 99.2 million two years ago. All cows and heifers that have calved, at 45.6 million, were 3 percent above the revised 44.2 million on January 1, 1994, and 6 percent above the 43.0 million two years ago . Beef cows, [illegible].1 million, were up 4 percent from last year, and 8 percent above two years ago. Milk cows, at 9.53 million, were virtually unchanged from a year ago, but 1 percent below 1993.

Other class estimates on January 1, 1995, and the changes from January 1 last year and two years ago, respectively, are as follows:

- All heifers 500 pounds and over, 19.9 million, up 2 percent and up 6 percent.
- Beef replacement heifers, 6.48 million, up 2 percent and up 6 percent.
- Milk replacement heifers, 4.12 million, down 1 percent from both years.
- Other heifers, 9.29 million, up 2 percent and up 9 percent.
- Steers weighing 500 pounds and over, 17.1 million, up 1 percent from both years.
- Bulls weighing 500 pounds and over, 2.39 million, up 4 percent and up 5 percent.
- Calves under 500 pounds, 18.3 million, up 2 percent and up 1 percent.

The 1994 calf crop was estimated at 40.7 million, up 3 percent from 1993 and up 5 percent from 1992. Calves born during the first half of the year were estimated at 29.8 million, up 3 percent from 1993 and up 5 percent from 1992.

SPECIAL THANKS to all livestock producers responding to our January 1 cattle and sheep inventory surveys. Field and telephone enumerators contacted over 2,000 Montana farmers and ranchers early in January. Names were selected on a statistical probability basis. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics for a more efficient production and marketing system.

1/ Actual number.

JANUARY 1, 1995 SHEEP INVENTORY

The number of sheep and lambs on **Montana** farms and ranches totaled 490,000 head on January 1, 1995. The sheep and lamb inventory is down 8 percent from last year. There were 2,300 Montana sheep operations during 1994, down 200 from 1993.

Total breeding sheep and lambs decreased 50,000 head from last year, to 450,000. Ewes one year and older were down 10 percent at 367,000 head. The 1994 lamb crop was down 3 percent at 465,000 head. The average value of sheep and lambs on January 1, 1995 was $3.00 above last year at $68.00 per head.

All sheep and lamb inventory in the **United States** on January 1, 1995, totaled 8.90 million head, down 9 percent from the previous record low set last year. Total breeding sheep and lambs and ewes one year old and older also set record lows. The value of sheep and lambs totaled $664 million, 2 percent below a year earlier. The average value per head was $74.70, up 7 percent from a year earlier.

Breeding sheep inventory decreased to 6.44 million head on January 1, 1995, down 11 percent from 7.23 million last year. This is the lowest level ever recorded. Ewes one year old and older, at 5.30 million head, were down 9 percent. This compares with the previous record low of 5.80 million head set last year.

The 1994 lamb crop of 5.90 million head was down 7 percent from 1993. This compares with the previous record low of 6.38 million head set a year ago. The 1994 lambing rate was 102 per 100 ewes one year old and older on hand January 1, 1994, compared with 98 in 1993.

The number of operations with sheep during 1994 totaled 87,350, down 6 percent from 1993 which is also a record low.

SHEEP and LAMBS INVENTORY JANUARY 1, 1993-95

PRICES RECEIVED

Montana crop prices for the full month of December were higher than the previous month, except for oats (which fell 23 cents to 1.16 per bushel) and other hay (which is unchanged at $63.00 per ton). Alfalfa hay rose $1.00 to $74.00 per ton.

Spring wheat prices went up 8 cents to $3.62 and winter wheat prices increased 11 cents to $3.63 per bushel. The average durum price, at $5.29 per bushel, was 35 cents above the previous month. Mid-month January prices for all wheat averaged $3.54 per bushel. In December, barley producers saw a 4-cent increase, at $2.29 per bushel, when compared with the previous month, but the all barley price for the first half of January averaged 2 cents lower.

Montana livestock prices were mixed for the full month of December. Steers and heifers prices dropped $1.80 to $75.50 per cwt, but mid-January prices are averaging $1.00 higher. Cow prices in the state fared the best, increasing $2.20 to $38.10 per cwt. for the full month of December. Calf prices averaged 40 cents lower at $79.20 per cwt.

Prices received for sheep increased $2.20 to $33.10, and lambs remained at $66.90 per cwt. Milk prices decreased 20 cents to $13.70 per cwt.

At the national level, steer and heifer prices averaged $68.20 per cwt. for the full month of December. Cow prices averaged $37.60 and hogs were $30.80 per cwt. The U.S. all wheat price was $3.75 per bushel and all barley was $2.10 per bushel. Egg prices were 63 cents per dozen.

The U.S. All Farm Products Index of Prices Received in January was 98 based on 1990-92=100, down 1 point from December 1994. Price gains from December for cattle, hogs, cotton, and tomatoes were offset by price declines for wheat, milk, lettuce, and broccoli.

The seasonal changes in the mix of commodities farmers sell also affected the overall index level. Lower seasonal marketings of poultry, milk, cotton and cottonseed, fruits, and vegetables more than offset the affect of increased seasonal marketings of cattle, corn, and soybeans to lower the overall index.

CATTLE ON FEED DOWN 5 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed for slaughter market in the 13 States preparing quarterly estimates totaled 10.6 million head, down 5 percent from a year ago and down 3 percent from January 1, 1993. The inventory included 6.89 million steers and steer calves, down 5 percent from a year ago. This group accounts for 65.0 percent of the total inventory. Heifers and heifer calves accounted for 3.66 million head, 5 percent below a year ago.

Placements of cattle and calves on feed in the 13 States during the October-December 1994 quarter totaled 7.09 million, fractionally above last year but 5 percent below October-December 1992. Net placements of 6.83 million for October-December were 1 percent above last year but down 4 percent from October-December 1992.

Marketings of fed cattle during the October-December 1994 quarter totaled 5.48 million, up 5 percent from the same quarter last year and 6 percent above two years ago.

Other disappearance totaled 260,000 head compared to 325,000 in October-December 1993 and 320,000 in October-December 1992.

JANUARY 1, 1995 MARKET SHEEP AND LAMBS

Market sheep and lambs in Montana totaled 40,000 head with market lambs making up 98 percent of the total. Five percent of the market lambs were under 65 pounds, 36 percent were 65 - 84 pounds, 46 percent 85 - 105 pounds, and 13 percent were over 105 pounds. Market sheep totaled 1,000 head.

U.S. Market sheep and lambs on January 1, 1995, totaled 2.46 million head. Market lambs comprised 96 percent of the total. Twenty-five percent were under 65 pounds, 18 percent were 65 - 84 pounds, 33 percent 85 - 105 pounds, and 24 percent were over 105 pounds.

MONTANA 1994 CROP PRODUCTION

Although the year ended up very dry, most of Montana's small grain crops were near average. The year started off with good moisture supplies, benefitting from the reserves of the very wet 1993 season. The rains basically quit after mid-June and estimated yields deteriorated after that. All wheat production for the state ended up at 170.6 million bushels, down over 17% from 1993's record year. Yield for 1994 averaged 31.7 bushels per acre, down from 39.2 the previous year.

Because of it's early development characteristics and ablility to utilize the good spring moisture, winter wheat yields fared the best. The average yield for winter wheat, down 7 bushels from a year ago, was set at 35 bushels per acre. Total production was off over 37% from last year, not only due to a lower yield, but also to a smaller amount of acreage planted. Farmers weren't able to plant as much last fall because of the late, wet season. Production was estimated at 64.8 million bushels.

The decrease in winter wheat acreage was made up by a large increase in spring wheat. The increase in spring wheat acres allowed farmers to harvest the largest spring wheat crop on record. Spring wheat production was estimated at 100.5 million bushels, nearly 1% more than last year's record crop. Spring wheat yield averaged 30 bushels per acre, down 7 bushels from 1993. Harvested acreage was 3.35 million acres, up 650 thousand acres from a year ago.

Durum wheat acreage also showed a large increase over 1993. Harvested acreage was estimated at 178 thousand acres, up 64 thousand from last year. Total production was set at 5.34 million bushels with an average yield of 30 bushels per acre.

Barley harvested acreage increased slightly over last year, while yields fell 14 bushels to 44 bushels per acre. Total production, at 52.8 million bushels, was off over 17% from a year ago. Oat yields fell 17 bushels per acre from 1993 and were set at 48 bushels per acre. Total oats production was set at 3.6 million bushels, down nearly 35% from last year.

MONTANA 1994 CROP VALUES

The value of Montana's 1994 wheat crop fell nearly 10% from last year. All wheat value is estimated at $646.3 million compared with $715.2 million for 1993. Although the preliminary season average price moved up 30 cents to $3.80 per bushel for 1994, decreased production from 1993's record crop more than offset the price increase to lower the value of production. A record spring wheat crop, valued at $381.9 million, contributed over 59% of the value. The preliminary season average price per bushel for winter, spring, and durum wheat were $3.65, $3.80, and $5.25, respectively.

A 17% decrease in barley production offset the increase in the season average price to cause the value of production to fall nearly 10%. Barley's 1994 preliminary season average price is estimated at $2.25, compared with $2.06 in 1993. Value of production is estimated at $118.8 million, down $12.6 million from 1993.

All hay value of production also fell in 1994. The current value, at $309.5 million, is down over 3% from last year. The preliminary season average price for all hay is set at $69.00 a ton, up $1.00 from a year ago.

POTATO STOCKS UP 5 PERCENT

Montana producers stored 3 million cwt of potatoes on January 1, 1995, compared with 2.5 million a year ago. The January 1 stocks represent 94 percent of production from the 1994 crop, compared with 93 percent a year earlier.

Western States held 166 million cwt of potatoes in storage on January 1, 1995, a gain of 3% from 1994 and 12% more than two years ago. Most of the Western stocks are held in Idaho, Oregon, and Washington. Idaho cellars held 1 percent fewer potatoes this year than last, with very heavy movement. Washington's stocks were up 11 percent and Oregon gained 4 percent.

The 15 major potato States held 229 million cwt of potatoes on January 1, 1995, up 5 percent from a year earlier and 6 percent above 1993. Storage accounted for 57 percent of 1994 fall production, down 1 point from last year. Stocks by type were 2 percent red, 16 percent white, and 82 percent russet. December 1 stocks were revised down slightly with Washington coming off 500,000 cwt.

Processors continue to buy larger amounts of potatoes, using 81.6 million cwt so far this season, a gain of 9 percent from a year ago and 14 percent above two years ago. During December, processing claimed 16.0 cwt of potatoes, up 16 percent from a year ago.

OCTOBER - DECEMBER MILK PRODUCTION

During the October - December quarter, Montana milk cows produced 80 million pounds of milk, a 3 percent increase over the same period a year ago. The number of milk cows in Montana is 21,000 head, down 1,000 from a year earlier.

Grain and other concentrates fed to Montana's milk cows on January 1 averaged 18 pounds per day compared with 18.3 pounds a year earlier. The value of grain and other concentrates fed to cows on January 1, averaged $7.05 per cwt, down $0.65 from January 1, 1994.

Milk production in the 21 major States during December totaled 10.8 billion pounds, 3 percent above production in these same States in December 1993. November revised production, at 10.4 billion pounds, was 4 percent more than November 1993. Production per cow in the 21 major States averaged 1,355 pounds for December, 56 pounds above December 1993. The number of cows on farms in the 21 major States was 7.99 million head, 63,000 head less than December 1993 and 9,000 head less than November 1994.

During the October-December period, the 21 major States produced 31.9 billion pounds of milk, 83.9 percent of the U.S. production. If the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 12.8 billion pounds for October, 12.4 billion pounds for November, and 12.9 billion pounds for December 1994.

The quarterly production of milk for the U.S. was 38.1 billion pounds, 4 percent above the October-December period in 1993. The average number of milk cows in the U.S. during the October-December quarter was 9.60 million head, 43,000 less than the same period a year earlier.

Grain and other concentrates fed to milk cows on January 1, 1995, averaged 18.9 pounds per cow, 0.4 pound more than January 1, 1994. The value of grain and other concentrates fed to cows on January 1 averaged $7.66 per hundredweight, $0.52 less than January 1, 1994.

RED MEAT PRODUCTION FOR DECEMBER

Montana slaughter plants produced 1.69 million pounds, dressed weight, of red meat during December 1994, a 2 percent increase from November, and a 6 percent increase from a year ago. The number of cattle slaughtered, at 1,900 head, was unchanged from last year. The average weight was 1,156, down 1 pound from last year's average.

There were 3,000 hogs slaughtered in Montana during December, up 700 head from a year ago. The average live weight was 247 pounds. Sheep slaughtered, at 400 head increased 100 head from last year, while the average live weight decreased 3 pounds to 111 pounds.

Commercial red meat production for the United States totaled a record high 3.72 billion pounds during December, 5 percent above the previous record high set in December 1993. Beef production totaled 2.02 billion pounds, up 4 percent from a year earlier. Head kill totaled 2.87 million, up 3 percent from a year earlier. The average live weight remains unchanged at 1,189 pounds.

Pork production, at 1.64 billion pounds, was up 6 percent from the previous record high set in December 1993. Hog kill totaled 8.79 million head, 5 percent above a year earlier. The average live weight increased 3 pounds to 260 pounds.

Lamb and mutton production, at 26.0 million pounds, was down 7 percent from year earlier. Slaughter totaled 425,500 head, down 4 percent from a year earlier. The average live weight decreased 4 pounds to 123 pounds.

January-December red meat production was 42.5 billion pounds, up 5 percent from the comparable period a year earlier. Accumulated beef production rose 6 percent, veal increased 6 percent, pork was up 4 percent, but lamb and mutton decreased 7 percent.

1994 EGG PRODUCTION AND CHICKEN INVENTORY

Montana chickens produced 95 million eggs during the year ending November 30, 1994. This is down 24 percent from last year. Our state averaged 363,000 layers in 1994, compared with 460,000 the previous year. The annual average production per layer on hand was 262 eggs, down 3 percent from a year ago.

There were 510,000 total chickens on Montana farms and ranches on December 1, 1994, compared with 550,000 on hand last year. On hand December 1, 1994 were 232,000 layers 20 weeks old and older, 27,000 pullets between 13 and 20 weeks old, and 112,000 pullets 13 weeks and under. The total value of all chickens on December 1, 1994, was $1,377,000, down 7 percent from December 1, 1993. The average value per bird remained at $2.70.

U.S. egg production during the year ending November 30, 1994, totaled 73.9 billion eggs, up 3 percent from the previous year's total of 71.9 billion eggs. Layer numbers during 1994 averaged 291 million, up 2 percent from a year earlier. The annual average production per layer on hand in 1994 was 254 eggs, compared with the 1993 average of 253 eggs per layer.

The total number of chickens (excluding commercial broilers), on hand on December 1, 1994, was 384 million head, 1 percent above last year.

Potential layers (layers 20 weeks old and older, plus pullets 13 weeks and older but less than 20 weeks) on hand December 1, 1994, totaled 331 million, up 2 percent from the 324 million on hand December 1, 1993. Of the 331 million potential layers, 90 percent were 20 weeks old and older and the remainder were pullets 13 weeks and older but less than 20 weeks.

The total value of all chickens on December 1, 1994, was $902 million, up slightly from December 1, 1993. The average value dropped from $2.37 per bird on December 1, 1993, to $2.35 per bird on December 1, 1994.

- Hay Stocks
- Late Season Crops
- December 1 Grain Stocks
- Ag Prices Received
- Hog & Pig Inventory

WINTER WHEAT SEEDINGS

Widespread drought in the latter part of the year caused much apprehension among Montana farmers for planting the 1995 winter wheat crop. Many producers held off waiting for moisture. When the moisture finally arrived it was very late in the season causing more apprehension on planting. By the end of October, 89% of the winter wheat was planted, 7 points behind normal. In the end, Montana farmers had planted 1.7 million acres of winter wheat, down 250,000 acres, or 13%, from last year's already small crop. This is the smallest acreage planted since 1970.

At the US level, farmers planted 49.6 million acres, up 1 percent from a year ago. Planting started in August in a few states, progress moved erratically in many areas, but reached 97% complete by December 1.

Hard red winter wheat totals 34.8 million acres, down 1 percent from last year's total, largely because of a 250,000 acre decline in Montana. Increases in the Central Plains hard red area more than offset acreage declines. Dryness hampered Colorado seedings and late rains may have prevented some Kansas seeding.

DECEMBER 1 HAY STOCKS

Montana farmers and ranchers had 3.95 million tons of hay on hand December 1, 1994. This is 9 percent less than a year ago. Lower stocks are attributed to higher hay consumption and lower hay production during the past year.

Hay stocks on U.S. farm and ranches totaled 104 million tons on December 1, 1994. This is a 3 percent increase over last year. The increased stocks reflects the larger 1994 hay crop and only slightly higher usage during the May to December period. Disappearance of hay during the May 1, 1994, to December 1, 1994, period totaled 67.8 million tons, 1 percent above the tonnage used during the same time period a year earlier.

LATE SEASON CROPS

Montana corn growers planted 60,000 acres of corn in 1994, down 5,000 from a year ago. Acreage for grain harvest is estimated at 20,000 acres, up 12,000 acres from a year ago. Acreage for silage is 39,000 acres. Since almost all of the corn in the state is irrigated and the growing season was very favorable, 1994 ended up to be a very good year for grain yields. A record yield of 135 bushels per acre was realized, 15 bushels per acre more than the previous record. Corn for grain production was 2.7 million bushels, over 3 times as much as last year's wet weather-impaired crop.

At the US level, corn for grain production was estimated at a record 10.1 billion bushels, 59 percent above 1993's crop and 7 percent above the previous record. The US yield per acre, at 138.6 bushels, was 37.9 bushels above 1993 and 7.1 bushels over the previous record set in 1992.

Sugar beet producers in Montana planted 54,300 acres of sugar beets while harvesting 54,000 acres in 1994, down only 100 acres from 1993. Farmers realized a record yield of 24.2 tons per acre, up over 2.5 tons from last year. Total production is estimated at a record 1.3 million tons, up 12% from a year ago.

At the US level, farmers planted 1.5 million acres and harvested 1.4 million acres of sugar beets. Total production is estimated at 32.0 million tons, up 22% from a year ago.

Dry bean production in Montana is estimated at 220 thousand cwt, up 42% from 1993. Farmers planted 10,200 acres, down 1,800 acres from a year ago. Acreage for harvest is set at 10,000 acres, down 1,000 acres from a year ago. Yields tied with the record set in 1989 at 2,200 lbs per acre. US production of dry beans is up 33% from last year at 29.2 million cwt.

Historic crop revisions are now available for all crops. With new information received from the 1992 Census of Agriculture, some estimates may have been revised. Revisions were possible from 1988 to 1993.

PLEASE RETURN

DECEMBER 1 GRAIN STOCKS

Montana wheat stocks in all positions on December 1, 1994 was estimated at 147 million bushels, 15 percent less than last year's large inventory. This year's December inventory is the second largest since 1987, and is 6 percent above the 10-year average. Winter wheat stocks, at 53.1 million bushels, were 33 percent below a year ago and all spring wheat, at 93.9 million, was up less than 1 percent. All wheat disappearance in the September through November quarter was 60 percent more than the 10-year average.

Barley stocks, in all locations on December 1, amounted to 40.2 million bushels down 20 percent from last December. Oat stocks, at 3.04 million bushels, are down 25 percent from last year.

U.S. all wheat stored in all positions December 1, 1994, totaled 1.50 billion bushels, 6 percent below December 1, 1993. The September-November 1994 disappearance is 574 million bushels, up 5 percent from the same quarter in 1993. Durum wheat stocks in all positions on December 1, 1994, totalled 65.4 million bushels, down 15 percent from last December 1. The second quarter disappearance of 26.9 million bushels is down 4 percent from the previous year.

Barley stored in all positions on December 1, 1994, is estimated at 279 million bushels, down 16 percent from the stocks of December 1, 1993. Indicated disappearance during the September-November quarter totaled 73.0 million bushels, 5 percent above the disappearance for the same period in 1993.

Corn stocks in all positions on December 1, 1994, totaled 8.08 billion bushels, up 36 percent from December 1, 1993. Oats stored in all positions on December 1, 1994, totaled 192 million bushels, 1 percent below December 1, 1993.

PRICES RECEIVED

Montana crop prices for the full month of November were mostly up from the previous month with exception of durum wheat, alfalfa hay and other hay. Durum wheat declined 9 cents to $4.94 per bushel. Alfalfa hay prices, at $73.00 per ton, decreased $1.00 from October, while other hay prices, at $63.00 per ton, declined $2.00. Winter wheat increased 5 cents to $3.52 per bushel and other spring wheat rose 13 cents to $3.54. Feed barley increased 8 cents to $1.83 per bushel, and malt barley climbed 22 cents to $2.75 per bushel. At $1.39, oats averaged 34 cents above the previous month. The all wheat price for mid-December averaged $3.67 per bushel while the all barley price was $2.25.

Livestock prices for the full month of November were lower, compared with the previous month, except for sheep & lambs. Cow prices were down $1.80 to $35.90 per cwt, while the average price for steers and heifers decreased 80 cents to $77.30 per cwt. Calf prices fell 40 cents to $79.60 per cwt. Prices received for sheep averaged $5.20 above last month at $30.90. Lamb prices rose $1.40 to $66.90 per cwt. Milk prices increased 50 cents to $13.90 per cwt. Steer and heifer prices for mid-December averaged $75.10 per cwt.

Nationally, steer and heifer prices averaged $68.40 per cwt for the full month of November. Cow prices came in at $37.20 and hogs were $28.00 per cwt. The U.S. all wheat price was $3.76 per bushel and $2.09 per bushel for all barley. Egg prices were 62.5 cents per dozen.

The All Farm Products Index of Prices Received in November was 136 based on 1977=100, up 3 points (2.3 percent) from November 1994. Price gains from November for lettuce, hogs, sweet corn, and corn more than offset price declines for milk, lemons, turkeys, and hay.

MONTANA HOG INVENTORY UP 17 PERCENT

Montana's hog inventory on December 1, 1994 was estimated at 210,000 head, 17 percent above 1993.

The average per head value fell significantly to $56, down from the $80 value last year. The total value of Montana's hog and pig inventory was $11.8 million, down from $14.4 million last year. There were 950 operations with hogs and pigs in the state during the year compared with 1,100 operations a year ago.

U.S. inventory of all hogs and pigs on December 1, 1994, was 59.6 million head. This was 3 percent above December 1993 but 4 percent below the September 1, 1994, inventory. This is the highest December inventory level since 1980.

Breeding inventory, at 6.96 million head, was down 3 percent from December 1, 1993, and down 6 percent from September 1, 1994. Market hog inventory, at 52.7 million head was 4 percent above December 1, 1993, but 4 percent below September 1, 1994.

The September-November 1994 U.S. pig crop was 24.2 million head, 1 percent more than both 1992 and 1993. Sows farrowing during this period totaled 2.96 million head, down 1 percent from both last year and two years ago. Pigs saved per litter was a record high 8.18 for the period compared to 8.05 during September-November 1993.

U.S. producers intend to have 2.86 million sows farrow during the December 1994-February 1995 quarter, 1 percent less than the actual farrowing during the same period last year but 2 percent above 1993. Intended farrowing for March-May 1995, at 3.19 million sows are 6 percent below 1994 and down 1 percent from the 1993 period.

The number of operations with hogs totaled 208,780 during 1994, down 7 percent from last year. Places with 2,000 or more hogs on hand accounted for 2 percent of the operations and 37 percent of the inventory.

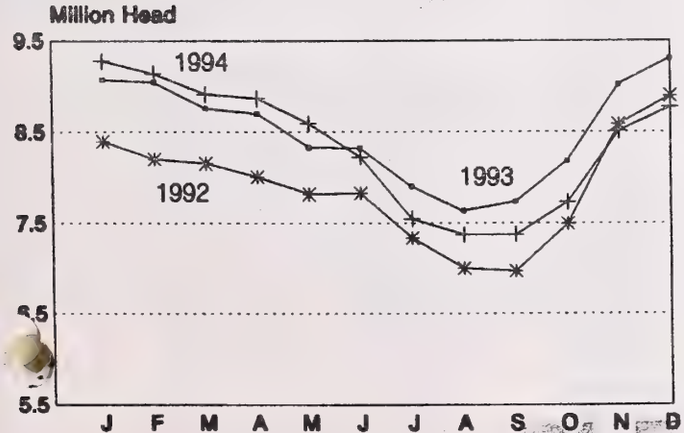
CATTLE ON FEED DOWN 6 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 8.77 million h[illegible] down 6 percent from a year ago and down 1 percent f[illegible] December 1, 1992.

Placements in feedlots during November totaled 1.84 million, 1 percent below 1993 and fractionally below 1992. Net placements of 1.77 million for November were up 1 percent from both last year and a year ago.

Marketings during November totaled 1.50 million, up 3 percent from 1993 and up 4 percent from 1992. Other disappearance during November was 71,000 head, 34 percent below 1993 and 22 percent below 1992.

CATTLE ON FEED
7 STATES
(AZ, CA, CO, IA, KS, NE, TX)



RED MEAT PRODUCTION FOR NOVEMBER

Montana slaughter plants produced 1.65 million pounds, dressed weight, of red meat during November 1994, down 4 percent from last month, but 11 percent above a year ago. The number of cattle slaughtered, at 1,700 head was unchanged from last year, but average weight, at 1,187 pounds, increased 31 pounds from a year ago.

The number of hogs slaughtered in November, at 3,000 head, increased 500 head over last year. The average live weight for hogs was 250 pounds compared with 234 a year ago. The number of sheep slaughtered, at 400 head, increased 100 head from last year and the average live weight gained 3 pounds to 115.

U.S. commercial red meat production for the United States totaled a record high 3.67 billion pounds during November, 6 percent above the previous record high set in November 1983.

Beef production totaled 1.98 billion pounds, up 5 percent from a year earlier. Head kill totaled 2.81 million, up 4 percent from last year. The average live weight increased 6 pounds to 1,191 pounds.

Veal production totaled 25.0 million pounds, up 7 percent from a year ago. Calf slaughter totaled 117,100, up 12 percent from a year earlier. The average live weight dropped 14 pounds to 371 pounds.

Pork production, at 1.64 billion pounds, was up 9 percent from the previous record high set in November 1993. Hog kill totaled 8.74 million head, 7 percent above last year. The average live weight increased 5 pounds to 261 pounds.

Lamb and mutton production, at 24.0 million pounds, dropped 6 percent from a year earlier. Slaughter totaled 406,000 head, down 3 percent from a year ago. The average live weight decreased 5 pounds to 120 pounds.

January-November red meat production was 38.8 billion pounds, up 5 percent from the comparable period a year earlier. Accumulated beef production jumped 6 percent, veal increased 5 percent, pork rose 4 percent, but lamb and mutton dropped 7 percent.

PLEASE RETURN

1994 POTATO PRODUCTION AND STOCKS

Montana's 1994 record fall potato production, at 3.2 million cwt, is 19 percent higher than a year earlier. December 1 stocks amounted to 3 million cwt which is 94 percent of production and 16 percent higher than December 1, 1993 stocks.

Montana growers harvested 10,000 acres of potatoes in 1994, up 11 percent from last year and 18 percent higher than 1992. The average yield is 320 cwt per acre, compared with 300 cwt per acre last year and 290 cwt per acre in 1992.

Nationally, production of fall potatoes in 1994 was estimated at 412 million cwt, down slightly from the November 1 forecast, but 7 percent above 1993 and 9 percent larger than 1992, and is the fourth consecutive record high potato production in the United States. Harvested area totaled 1.18 million acres, up 5 percent from 1993 and 4 percent above two years ago. The average yield of 349 cwt per acre, was an 8 cwt jump from a year earlier and 14 cwt above two years ago. The growing season was robust for potatoes with an early start, a long growing period, and nearly ideal harvest season. Eight Central and Western States produced record large fall potato crops including several record high yields.

Ten Western States produced 290 million cwt in 1994, up 4 percent from 1993 and 14 percent above 1992. Acreage for harvest, at 729,900 acres, was up 4 percent. The average yield of 398 cwt per acre gained 1 cwt from a year ago. Idaho's production of 134 million cwt was a record high, up 6 percent from last year with the best quality in years. Washington's growers also had their largest crop ever, slightly larger than 1993, but somewhat rougher in quality because of hot spells during the summer. Oregon's yield was record high with good quality in all areas. Colorado's fall crop, also a record high production, rose 2 percent above 1993.

The 15 major potato States held 264 million cwt of potatoes on December 1, 1994, up 6 percent from a year earlier and 7 percent above 1992. Storage accounted for 66 percent of 1994 fall production compared with 67 percent in 1993. Stocks by type were 3 percent red, 17 percent white, and 80 percent russet-with more russet and fewer whites than a year ago. Reds were the same as last year.

Disappearance from the start of harvest to December 1 was a record high 136 million cwt of potatoes, up 9 percent from the same period in 1993. Shrink and loss to date were estimated at 18.6 million cwt, up 6 percent from the 17.5 million cwt lost in 1993 and 8 percent above the 17.1 million cwt lost from the 1992 crop. Processors continue to buy ever larger amounts of potatoes, using 65.6 million cwt so far this season. This is a gain of 7 percent from a year ago and 15 percent above two years ago.

Western States held 189 million cwt of potatoes in storage on December 1, 1994, a gain of 4 percent from 1993 and 14 percent more than two years ago. Most of the Western stocks are held in Idaho, Oregon, and Washington. Idaho cellars held 1 percent more potatoes this year than last, with very heavy early movement. Washington's stocks were up 10 percent, Oregon gained 6 percent, and Colorado's stocks were up 4 percent from a year ago. California stored 11 percent fewer potatoes than a year earlier.

1/ 1994 production excludes 1,125,000 cwt dumped from storage before November 1.

NOVEMBER EGG PRODUCTION UP 4 PERCENT

U.S. egg production totaled 6.26 billion during November 1994, up 4 percent from the 6.04 billion [illegible]ced a year ago. Production included 5.36 billion table [illegible]gs and 902 million hatching egg type, of which 843 million were broiler-type and 59.0 million were egg-type. The total number of layers during November 1994 averaged 297 million, up 4 percent from the 287 million a year ago. November egg production per 100 layers was 2,109 eggs, compared with 2,107 in November 1993.

All layers in the U.S. on December 1, 1994, totaled 298 million, compared with 289 million a year ago. The 298 million layers consisted of 247 million layers producing table or commercial type eggs, 47.6 million layers producing broiler-type hatching eggs, and 2.72 million layers producing egg-type hatching eggs. Rate of lay per day on December 1, 1994, averaged 70.7 eggs per 100 layers, up 1 percent from the 70.3 eggs a year ago.

NOVEMBER MILK PRODUCTION

Milk production in the 21 major States during November totaled 10.4 billion pounds, 4 percent above production in these same States in November 1993. October revised production, at 10.7 billion pounds, was 4 percent more than October 1993.

Production per cow in the 21 major States averaged [illegible]8 pounds for November, 59 pounds above November 1993. The number of cows on farms in the 21 major States was 8.0 million head, 65,000 head less than November 1993 and 10,000 head less than October 1994.

During the July-September period, the 21 major States produced 32.3 billion pounds of milk, 84.1 percent of the U.S. production. If the remaining 29 States not surveyed monthly (which includes Montana) followed the same pattern as the 21 States, the U.S. production would be 12.3 billion pounds for November 1994.

JAPAN REMAINS STRONG MARKET FOR U.S. AG EXPORTS

Japan is expected to remain a promising market for U.S. food producers and processors through the end of the century because of its size and potential for expansion. However, changing Japanese consumer attitudes, farm output, purchasing power, dietary preferences, as well as market deregulation, will likely continue to alter the composition of U.S. farm exports to Japan. In addition, the U.S. will likely face stiffer competition in the Japanese [illegible]ket from other exporters as trade barriers are e[illegible]nated.

In 1993, Japan imported more than $30 billion in agricultural products, not counting $15 billion in fish and shellfish and $15 billion in forestry products. The U.S. has accounted for a large share of Japan's agricultural imports for many years. After falling to a low of one-third in 1986, the U.S. share of Japan's total agricultural imports rose to nearly 40 percent by the early 1990's.

Japan is the largest export market for U.S. food growers and processors, comprising consistently over one-fifth of all U.S. farm exports. U.S. farm sales to Japan in fiscal 1994, estimated to be $9.3 billion, are expected to set another record. For many years Japan has been the largest export market for several U.S. agricultural commodities, including corn, soybeans, tobacco, beef, citrus, and pork.

However, other countries have recently replaced Japan as leading buyers of certain other important U.S. export commodities. For example, in fiscal 1993 Hong Kong replaced Japan as the top market for U.S. poultry, and South Korea became the leading U.S. market for cotton. South Korea became the top-ranking U.S. market for cattle hides in the mid-1980's after Japan's higher labor costs made its tanning industry less competitive. A similar pattern occurred in Japan's textile industry. Labor costs in South Korea have recently risen, making Southeast Asia and China more favorable overseas locations for Japanese manufacturers.

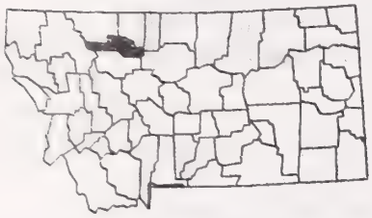
Although U.S. agricultural trade with Japan still relies heavily on bulk commodities such as grain and soybeans, the U.S. since the mid-1980's has expanded its exports of processed and high-value products (HVP's), including beef and citrus. HVP's are agricultural products other than raw grains, oilseeds, cotton, and tobacco.

While Japan's HVP imports from all sources have been rising steadily for more than two decades, they accelerated after 1985. Several factors were behind this speedup, including tariff reductions, deregulation of cigarette imports, the 1988 Beef-Citrus Agreement, a GATT agreement that removed or expanded quotas for some processed farm products, and the substantial appreciation of the yen.

Japan and Western Europe were the two leading markets for U.S. HVP's from fiscal 1989 through 1992. In 1993, Japan was second to Canada (Western Europe was third), with HVP imports from the U.S. totaling $4.8 billion, accounting for over half of U.S. farm exports to Japan. The top five U.S. high-value products exported to Japan in fiscal 1993 were beef, feed and fodder, fresh fruit, variety meats, and pork.

Japan is the largest foreign market for U.S. processed foods, followed by Canada and Mexico. Processed foods include fish products and distilled spirits, but exclude some intermediate-processed products like hides and skins, so that the total differs from those for high-value exports. According to USDA's Economic Research Service (ERS), processed food exports to Japan from U.S.-based companies were $5.3 billion in 1991, a quarter of total U.S. processed food exports. Western Europe provides the strongest competition for U.S. processed food sales abroad.

featuring...**PONDERA COUNTY**



Pondera County was created in April of 1919 and comprises 1,039,788 acres of land in north central Montana. It's western border is marked by the Continental Divide of the Rocky Mountains, and a section of the Lewis and Clark National Forest takes up the western corner of the county. Although smaller in size than many of the counties, Pondera County is big on crop production. For the 1993 crop year, Pondera County ranked 2nd in both barley and durum wheat production. The county ranked 6th for winter wheat and 11th for spring wheat production. Some hay is also grown in the county.

In livestock numbers for 1994, Pondera County came up 7th in the hog inventory. Some sheep and cattle are also raised. The county turned up 29th in the county rankings for sheep numbers and 41st in cattle numbers for 1994.

Crops grown in Pondera County brought in $35,490,000 in cash receipts and 6th place in the county rankings in 1992. Livestock and livestock products turned in $12,285,000 in cash receipts with a rank of 35th, and government payments added $10,949,000 for total cash receipts of $58,724,000 in 1992.

"Happy Holidays!" from all of us at the Montana Agricultural Statistics Service. Nineteen ninety-four proved to be another roller coaster adventure for Montana agriculture. On the up side, Montana's wheat producers harvested their largest spring wheat crop ever and the fourth largest all wheat crop; however, 1994 will probably be most remembered for its lower cattle prices and the controversy surrounding Canadian grain imports.

The phasing out of the wool incentive payments, the passage of NAFTA and GATT, USDA reorganization, and the upcoming 1995 Farm Bill join Mother Nature, the banker, and other factors Montana producers will have to face in the upcoming years. Although fewer farms are being reported, agriculture is still Montana's number one industry and it continues to remain strong!

We would like to take this opportunity to thank each of you for taking an active part in ensuring that Montana Agriculture is fully represented in the national picture. We would be unable to provide sound statistical information without the voluntary cooperation of our farmers and ranchers.

We sincerely hope you and your family have a wonderful and safe holiday season and that the New Year finds you ready to partake in the adventures of 1995!

NEAR-RECORD U.S. AG EXPORTS FOR 1995

Continued strong U.S. sales of high-value commodities (primarily livestock and horticultural products) will offset the declining value of bulk exports in fiscal year 1995 to push up total value of U.S. farm exports to $43 million, the highest since the record $43.8 billion in fiscal 1981. High-value exports will surpass $26 billion in fiscal 1995, up from $25.5 billion in 1994.

Gains in consumer food products--meats, fruits and vegetables, and processed and prepared foods--will drive this advance. The value of intermediate high-value exports--such as animal feeds, soybean meal and oil, cattle hides, and seeds--which are used as farm inputs or processed into finished products, is expected to remain flat.

Bulk sales continue to constrain the value of U.S. exports, as lower grain and oilseed prices bring down the value. Strong domestic supplies, however, are projected to boost export volume 8 percent in 1995 for major bulk products (grains, soybeans, rice, and cotton).

Despite the optimistic outlook for export sales in 1995, the agricultural trade surplus is projected to decline. Sharp rises in world coffee prices are expected to propel an increase in the value of agricultural imports.

Stronger economic growth projected for 1995 is broadening global demand for a variety of consumer foods. World income is expected to rise over 3 percent in 1995, and economic growth will be even stronger in markets where U.S. food exports are expanding fastest, such as Mexico and some Pacific Rim countries. Rising incomes and changing dietary preferences are likely to increase demand for meats, fruits, and vegetables.

U.S. exports are benefiting from a dollar that is weaker relative to some major foreign currencies. This is particularly true in Japan where the dollar has dropped 20 percent below its 1992 level. With a lag of 1-2 years before the exchange rate changes exert full impact on exports and imports, the steady decline of the dollar is helping boost U.S. agricultural exports to Japan to record levels in 1994. Export prospects in 1995 are expected to be at least as good.

But in the overall trade picture, the dollar has actually strengthened on a trade-weighted basis since 1992. The dollar has strengthened relative to the currencies of two major agricultural trade partners--Canada and Mexico--countering some of the weakness vis-a-vis the yen and recent declines against European currencies. The outlook for the dollar is relatively stable entering 1995, implying that income growth will likely be a key factor in export expansion.

WHAT IS PER CAPITA USE?

Per capita use of food commodities represents the apparent net utilization of the commodities marketed by growers. Total use is derived from adjusting total utilization such categories as trade (imports less exports), stocks (inventories), and storage losses. When total use is divided by the U.S. population figure (including military), an estimate of commodity use per person is established.

So per capita fruit and vegetable use is not actual fruit or vegetable consumption. The per capita use series is not based on consumption surveys but is an *estimate* of the amount of raw product supplied per person, based on the best available data. USDA's Economic Research Service does not track the actual amount of fruit or vegetables used by consumers. What is termed "per capita use" or "consumption" is actually the per capita supply of fruits and vegetables in domestic markets. In the farm-weight (fresh-equivalent) series, ERS does not make adjustments for loss during transportation from the shipping point, shrinkage from spoilage and trimming during retailing, or product discarded by consumers.

STATES PURSUE NEW AG CREDIT PROGRAMS

Many states have begun accelerating the use of small, innovative farm credit programs in order to assist beginning farmers, encourage environmental improvements, promote alternative crops, and meet other state goals. During 1993/94, 32 states had 81 of these programs, assisting more than 31,000 farmer-borrowers, according to USDA's Economic Research Service.

These state programs are funded and/or operated by state agencies, and largely complement the larger federally sponsored agricultural credit system. The programs help farmers gain access to credit by providing direct loans, loan guarantees, and grants, which reduce the cost of capital and increase its availability.

Although the pace has quickened in recent years, states have been involved in designing credit programs for several decades and have used that experience to make several innovations in funding methods and program purposes. Although most remain small in size in comparison with Federal programs, state-level programs are highly responsive to the credit needs of farmers in their geographical areas. And for some specific purposes--such as promoting new crops and environmental improvements--state funding may exceed Federal.

Surveys of state programs conducted by the Economic Research Service have identified six major reasons why states choose to operate farm credit programs:

- assisting farmers through a period of extreme financial hardship;

- enabling more farmers to qualify for additional assistance, possibly a bank loan or participation in a Federal program;

- fostering successful entry into farming by beginning farmers;

- promoting innovation or diversity through new and nontraditional crops;

- encouraging implementation of environmentally sound practices; and

- strengthening the agricultural sector with incentives to modernize.

SOURCE: Articles on this page taken from Agricultural Outlook magazines, October & November 1994.

PRICES RECEIVED

Montana all hay prices were up $3.00 for the full month of October with alfalfa hay at $74.00 per ton and other hay at $65.00 per ton. Oats showed the biggest crop price decrease, down 30 cents to $1.05 per bushel. Spring wheat prices for the Treasure State decreased slightly to $3.41 per bushel, but winter wheat prices rose 20 cents to $3.47 and durum wheat increased to $5.03 per bushel. Mid-month November prices for all wheat averaged $3.59 per bushel. Barley producers received 13 cents less, at $2.07 per bushel, in October when compared with the previous month. However, all barley prices for the first half of November show a 7 cent increase.

Montana livestock producers continued to see lower prices for the full month of October. Steers and heifers prices saw a slight gain of $1.60 to $78.10 per cwt but mid-November prices are averaging 80 cents lower. Cow prices in the state fared the worst, dropping $4 to $37.70 per cwt for the full month of October. Calf prices fell $1.70 to $80.00 per cwt. Prices received for sheep averaged $25.70, 70 cents below last month and lambs brought an average of $65.50 per cwt, down $1.20. Milk prices increased 40 cents to $13.40 per cwt.

At the **national** level, steer and heifer prices averaged $66.10 per cwt for the full month of October. Cow prices were $38.50, while hogs averaged $31.90 per cwt. The U.S. all wheat price was $3.77 per bushel and $1.93 per bushel for all barley. Egg prices were 57.6 cents per dozen. The All Farm Products Index of Prices Received in November was 132 based on 1977=100, down 1 point (0.8 percent) from October 1994 and the lowest monthly index since April 1988. Price declines from October for hogs, corn, lemons, and grapefruit more than offset price gains for cattle, eggs, potatoes, and tomatoes.

NEAR-RECORD U.S. AG EXPORTS FOR 1995

Continued strong U.S. sales of high-value commodities (primarily livestock and horticultural products) will offset the declining value of bulk exports in fiscal year 1995 to push up total value of U.S. farm exports to $43 million, the highest since the record $43.8 billion in fiscal 1981. High-value exports will surpass $26 billion in fiscal 1995, up from $25.5 billion in 1994.

Gains in consumer food products--meats, fruits and vegetables, and processed and prepared foods--will drive this advance. The value of intermediate high-value exports--such as animal feeds, soybean meal and oil, cattle hides, and seeds--which are used as farm inputs or processed into finished products, is expected to remain flat.

Bulk sales continue to constrain the value of U.S. exports, as lower grain and oilseed prices bring down the value. Strong domestic supplies, however, are projected to boost export volume 8 percent in 1995 for major bulk products (grains, soybeans, rice, and cotton).

Despite the optimistic outlook for export sales in 1995, the agricultural trade surplus is projected to decline. Sharp rises in world coffee prices are expected to propel an increase in the value of agricultural imports.

Stronger economic growth projected for 1995 is broadening global demand for a variety of consumer foods. World income is expected to rise over 3 percent in 1995, and economic growth will be even stronger in markets where U.S. food exports are expanding fastest, such as Mexico and some Pacific Rim countries. Rising incomes and changing dietary preferences are likely to increase demand for meats, fruits, and vegetables.

U.S. exports are benefiting from a dollar that is weaker relative to some major foreign currencies. This is particularly true in Japan where the dollar has dropped 20 percent below its 1992 level. With a lag of 1-2 years before the exchange rate changes exert full impact on exports and imports, the steady decline of the dollar is helping boost U.S. agricultural exports to Japan to record levels in 1994. Export prospects in 1995 are expected to be at least as good.

But in the overall trade picture, the dollar has actually strengthened on a trade-weighted basis since 1992. The dollar has strengthened relative to the currencies of two major agricultural trade partners--Canada and Mexico--countering some of the weakness vis-a-vis the yen and recent declines against European currencies. The outlook for the dollar is relatively stable entering 1995, implying that income growth will likely be a key factor in export expansion.

WHAT IS PER CAPITA USE?

Per capita use of food commodities represents the apparent net utilization of the commodities marketed by growers. Total use is derived from adjusting total utilization such categories as trade (imports less exports), stocks (inventories), and storage losses. When total use is divided by the U.S. population figure (including military), an estimate of commodity use per person is established.

So per capita fruit and vegetable use is not actual fruit or vegetable consumption. The per capita use series is not based on consumption surveys but is an *estimate* of the amount of raw product supplied per person, based on the best available data. USDA's Economic Research Service does not track the actual amount of fruit or vegetables used by consumers. What is termed "per capita use" or "consumption" is actually the per capita supply of fruits and vegetables in domestic markets. In the farm-weight (fresh-equivalent) series, ERS does not make adjustments for loss during transportation from the shipping point, shrinkage from spoilage and trimming during retailing, or product discarded by consumers.

STATES PURSUE NEW AG CREDIT PROGRAMS

Many states have begun accelerating the use of small, innovative farm credit programs in order to assist beginning farmers, encourage environmental improvements, promote alternative crops, and meet other state goals. During 1993/94, 32 states had 81 of these programs, assisting more than 31,000 farmer-borrowers, according to USDA's Economic Research Service.

These state programs are funded and/or operated by state agencies, and largely complement the larger federally sponsored agricultural credit system. The programs help farmers gain access to credit by providing direct loans, loan guarantees, and grants, which reduce the cost of capital and increase its availability.

Although the pace has quickened in recent years, states have been involved in designing credit programs for several decades and have used that experience to make several innovations in funding methods and program purposes. Although most remain small in size in comparison with Federal programs, state-level programs are highly responsive to the credit needs of farmers in their geographical areas. And for some specific purposes--such as promoting new crops and environmental improvements--state funding may exceed Federal.

Surveys of state programs conducted by the Economic Research Service have identified six major reasons why states choose to operate farm credit programs:

- assisting farmers through a period of extreme financial hardship;
- enabling more farmers to qualify for additional assistance, possibly a bank loan or participation in a Federal program;
- fostering successful entry into farming by beginning farmers;
- promoting innovation or diversity through new and nontraditional crops;
- encouraging implementation of environmentally sound practices; and
- strengthening the agricultural sector with incentives to modernize.

PRICES RECEIVED

Montana all hay prices were up $3.00 for the full month of October with alfalfa hay at $74.00 per ton and other hay at $65.00 per ton. Oats showed the biggest crop price decrease, down 30 cents to $1.05 per bushel. Spring wheat prices for the Treasure State decreased slightly to $3.41 per bushel, but winter wheat prices rose 20 cents to $3.47 and durum wheat increased to $5.03 per bushel. Mid-month November prices for all wheat averaged $3.59 per bushel. Barley producers received 13 cents less, at $2.07 per bushel, in October when compared with the previous month. However, all barley prices for the first half of November show a 7 cent increase.

Montana livestock producers continued to see lower prices for the full month of October. Steers and heifers prices saw a slight gain of $1.60 to $78.10 per cwt but mid-November prices are averaging 80 cents lower. Cow prices in the state fared the worst, dropping $4 to $37.70 per cwt for the full month of October. Calf prices fell $1.70 to $80.00 per cwt. Prices received for sheep averaged $25.70, 70 cents below last month and lambs brought an average of $65.50 per cwt, down $1.20. Milk prices increased 40 cents to $13.40 per cwt.

At the **national** level, steer and heifer prices averaged $66.10 per cwt for the full month of October. Cow prices were $38.50, while hogs averaged $31.90 per cwt. The U.S. all wheat price was $3.77 per bushel and $1.93 per bushel for all barley. Egg prices were 57.6 cents per dozen. The All Farm Products Index of Prices Received in November was 132 based on 1977=100, down 1 point (0.8 percent) from October 1994 and the lowest monthly index since April 1988. Price declines from October for hogs, corn, lemons, and grapefruit more than offset price gains for cattle, eggs, potatoes, and tomatoes.

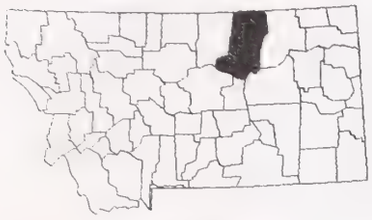
featuring...**PHILLIPS COUNTY**



Phillips County occupies approximately 3,289,523 acres of rolling prairie in north central Montana. The entire southern boundary of the county is comprised of portions of the Missouri River and Fort Peck Lake. Portions of the Charles M. Russell and UL Bend National Wildlife Refuges lie along the banks of the Missouri River and the Port Peck Lake in southern Phillips County. The Milk River crosses west to east through the center of the county, and the northern boundary of Phillips County makes up a portion of the Montana/Canadian border.

Phillips County is an extensive livestock producing area. The county ranked 7th in the January 1, 1994 cattle and calf inventory, and 10th in the sheep inventory for the same date. Hog production brought the county 11th place in the December 1, 1993 hog inventory.

Phillips County is also a vital crop producing area. It ranked 7th in oats production; 12th in other spring wheat production; 14th in barley production; 16th in all hay production, and 24th in winter wheat production for 1993.

Cash receipts for livestock and livestock products returned $28,056,000 in 1992, while crops receipts added $9,793,000. Government payments added $10,351,000 for a total cash return of $48,200,000 in 1992.

RED MEAT PRODUCTION FOR OCTOBER

Montana slaughter plants produced 1.71 million pounds, dressed weight, of red meat during October 1994, down fractionally from last month, but 8 percent above a year ago. The number of cattle slaughtered, at 1,800, was the same as last year, but average live weight, at 1,179 pounds, decreased 37 pounds from a year ago.

The number of hogs slaughtered in October, at 3,100 head, increased by 600 head over last year. The average live weight for hogs was 246 pounds, compared with 230 pounds a year ago. The number of sheep slaughtered at 500 head was the same as a year earlier, while the average live weight decreased 3 pounds to 116 pounds.

U.S. commercial red meat production for the United States was a record high 3.80 billion pounds during October, 2 percent above the previous record high set in October 1991.

Beef production totaled 2.12 billion pounds, 7 percent above a year earlier. Head kill totaled 2.95 million, up 5 percent from last year. The average live weight increased 14 pounds to 1,201 pounds.

Veal production totaled 25.0 million pounds, up 14 percent from a year ago. Calf slaughter totaled 115,600 head, up 19 percent from last year. The average live weight was down 15 pounds to 381 pounds.

Pork production, at 1.63 billion pounds, was up 11 percent from a year earlier and up 3 percent from the previous record high set in October 1992. Hog kill totaled 9.80 million head, 9 percent above a year earlier. The average live weight increased 4 pounds to 258 pounds.

Lamb and mutton production, at 23.0 million pounds, was down 6 percent from a year earlier. Slaughter totaled 396,900 head, down 2 percent from a year ago. The average live weight decreased 5 pounds to 119 pounds.

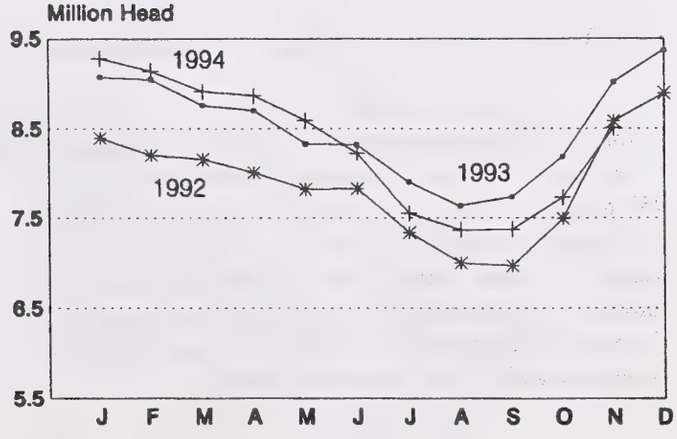
January-October red meat production was 35.2 billion pounds, up 5 percent from the comparable period last year. Accumulated beef production rose 6 percent, veal increased 5 percent, pork was up 3 percent, but lamb and mutton decreased 7 percent.

CATTLE ON FEED DOWN 6 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 8.51 million head, down 6 percent from a year ago and down 1 percent from October 1, 1992.

Placements in feedlots during October totaled 2.46 million, 1 percent below 1993 and 8 percent below 1992. Net placements of 2.40 million for October were up fractionally from last year but 7 percent below 1992. Marketings during October totaled 1.62 million, up 4 percent from 1993 and up 9 percent from 1992. Other disappearance during October was 56,000 head, 26 percent below both 1993 and 1992.

CATTLE ON FEED
7 STATES
(AZ, CA, CO, IA, KS, NE, TX)



MONTANA ANNUAL WAGE R. (E DROPS 38 CENTS, US RISES 14 CENTS

Montana farm workers earned an annual average of $5.44 per hour in 1994 compared with $5.82 per hour in 1993. All hired workers earned $5.26 per hour down $.30 from a year ago, and field workers earned $5.06 per hour down $.62 from last year. Together, field and livestock workers earned $5.01 per hour compared with $5.30 per hour in 1993.

Nationally, annual wage rates paid by farm operators during 1994 averaged $6.39 per hour. This compares to $6.25 during 1993 and $6.06 during 1992. There were 3.17 million people working on the Nation's farms and ranches during the week of October 9-15, 1994. This compares with 3.25 million people during the October 1993 survey week. Self-employed farm operators accounted for 1.49 million of the total, along with 516,000 unpaid workers, and 880,000 work (hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 279,000 workers.

Farm operators paid their hired workers an average wage of $6.46 per hour during the October 1994 survey week. This rate was up 20 cents from a year earlier. Workers paid on an hourly basis earned $6.17 per hour compared with $5.94 in October 1993. Field workers received an average of $6.16 per hour, up 25 cents from the October 1993 survey week. Livestock workers earned $5.82 per hour compared with $5.67 a year earlier.

Benefits were provided for 375,000 hired workers. Farm operators provided housing for 152,000, meals for 71,000, bonuses for 80,000, health insurance for 182,000, transportation for 47,000, and other benefits for 182,000 hired workers.

1/ Excludes Agricultural Service Workers. 2/ Annual rates are averages of the wage rates for each survey week weighted by the number of hours worked during the week. The annual average is based on data collected for January, April, July, and October. 3/ Excludes Alaska.

OCTOBER EGG PRODUCTION UP 4 PERCENT

U.S. egg production totaled 6.37 billion during October 1994, up 4 percent from the 6.14 billion produced a year ago. Production included 5.44 billion table eggs and 930 million hatching egg type, of which 872 million were broiler-type and 58.0 million were egg-type. The total number of layers during October 1994 averaged 295 million, up 4 percent from the 285 million a year ago. October egg production per 100 layers was 2,157 eggs, compared with 2,155 in October 1993.

All layers in the U.S. on November 1, 1994, totaled 296 million, compared with 285 million a year ago. The 296 million layers consisted of 245 million layers producing table or commercial type eggs, 47.9 million layers producing broiler- type hatching eggs, and 2.64 million layers producing egg-type hatching eggs. Rate of lay per day on November 1, 1994, averaged 69.9 eggs per 100 layers, down 1 percent from the 70.6 eggs a year ago.

Laying flocks in the 30 major egg production St produced 6.02 billion eggs during October. The number of layers during October averaged 279 million.

OCTOBER MILK PRODUCTIOI P 3 PERCENT

Milk production in the 21 major States during October totaled 10.7 billion pounds, 3 percent above production in these same States in October 1993. September revised production, at 10.5 billion pounds, was 4 percent more than September 1993.

Production per cow in the 21 major States averaged 1,330 pounds for October, 50 pounds above October 1993. The number of cows on farms in the 21 major States was 8.03 million head, 41,000 head less than October 1993 and 9,000 head less than September 1994.

During the July-September period, the 21 major States produced 32.3 billion pounds of milk, 84.1 percent of the U.S. production. If the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 12.7 billion pounds for October 1994.

NOVEMBER 1 SHEEP AND LAMBS ON FEED

The number of sheep and lambs on feed November 1, 1994, for the slaughter market on Montana farms and ranches was estimated to be 25,000 head, down 29 percent from last year. Lambs on feed accounted for 92 percent of the total on feed.

A tota[illegible] 15,000 lambs were in feedlots, down 3,000 head from a year ago. There were 9,000 lambs on feed in feedlots weighing less than 85 lbs and 6,000 weighing 85-105 lbs. Lambs on pasture and/or crop residue amounted to 8,000 head, down 5,000 head from last year. Of the lambs on pasture and/or crop residue, 3,000 weighed less than 85 pounds. Less than 500 lambs on feed in feedlots or on pasture/crop residue weighed over 105 pounds.

Sheep and lambs on feed November 1, 1994, for slaughter market in the 16 major producing States totaled 1.52 million head, 8 percent below 1993's 1.66 million head. The 1994 inventory included 1.47 million lambs (less than 1 year old) for slaughter market and 56,000 mature sheep (over 1 year old).

Of the total lambs on feed, 1.02 million head were in feedlots and the remaining 447,000 head were on pasture and/or crop residue. Of the total lambs on feed, 38 percent were under 85 pounds, 40 percent were 85 to 105 pounds, and 22 percent were over 105 pounds.

Colorado had the most sheep and lambs on feed with 385,000 head, followed by California with 215,000 head, and third was Wyoming with 194,000 head.

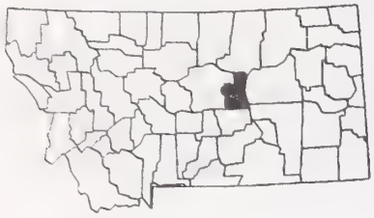
featuring...PETROLEUM COUNTY



Petroleum County occupies approximately 1,058,518 acres of land in central Montana. The surface of the land is generally rolling with valleys and benches. The extreme north/northeastern border of the county is defined by portions of the Missouri River and Fort Peck Lake. The Musselshell River defines the remainder of the eastern border. The county is traversed by Flat Willow Creek from the south, and Box Elder Creek from the north. They eventually join and empty into the Musselshell River on the eastern border of the county. The Sacagawea River crosses the northern leg of the county and flows into Fort Peck Lake.

Crops grown in the county include winter and spring wheat, barley, oats, and hay. The county ranked 45th in all hay production; 49th in barley production; 41st in spring wheat and 26th in winter wheat production for 1993. Petroleum County is not a major livestock producing county, but sheep and cattle are raised. The county ranked 37th for all cattle and calf inventory and 22nd for stock sheep and lamb inventory on January 1, 1994. Some hogs are also raised, but not to a great extent.

Cash receipts for the county totaled $13,890,000 in 1992. Livestock and livestock products receipts made up $9,550,000 of that total, while crops receipts contributed $3,020,000, and government payments added the remaining $1,320,000.

Highlights:

Red Meat Production
Quarterly Cattle on Feed
Quarterly Milk Production
Egg Production
Livestock County Estimates

RED MEAT PRODUCTION FOR SEPTEMBER

Montana slaughter plants produced 1.72 million pounds, dressed weight, of red meat during September 1994, down 21 percent from the previous month, but 16 percent above a year ago. The number of cattle slaughtered, at 2,900 head, rose 300 head from last year, but average live weight, at 1,194 pounds, decreased 35 from a year ago.

The number of hogs slaughtered in September, at 2,900 head, increased by 300 head over last year. The average live weight for hogs was 242 pounds, compared with 229 pounds a year ago. A total of 600 sheep were slaughtered, up 200 head from the same period a year ago, while the average live weight increased 1 pound to 116 pounds.

U.S commercial red meat production totaled a record high 3.72 billion pounds during September, 3 percent above the previous record high set in September 1992.

Beef production totaled 2.14 billion pounds, up 5 percent from a year earlier. Head kill totaled 2.94 million, up 3 percent from a the previous year. The average live weight increased 20 pounds to 1,205 pounds. Veal production totaled 23.0 million pounds, up 7 percent from a year earlier. Calf slaughter totaled 109,300 head, up 12 percent from a year ago. The average live weight dropped 17 pounds to 372 pounds.

Pork production, at 1.54 billion pounds, increased 7 percent from a year earlier and rose 2 percent from the previous record high set in September 1992. Hog kill totaled 8.38 million head, 6 percent above a year earlier. The average live weight increased 2 pounds to 254 pounds. Lamb and mutton production, at 23.0 million pounds, was down 12 percent from a year earlier. Slaughter totaled 400,700 head, down 6 percent from the previous year. The average live weight decreased 7 pounds to 119 pounds.

January-September red meat production was 31.4 billion pounds, up 4 percent from the comparable period a year earlier. Accumulated beef production was up 6 percent, veal was up 4 percent, pork was up 2 percent, but lamb and mutton was down 7 percent.

CATTLE ON FEED DOWN 5 PERCENT IN 13 QUARTERLY STATES

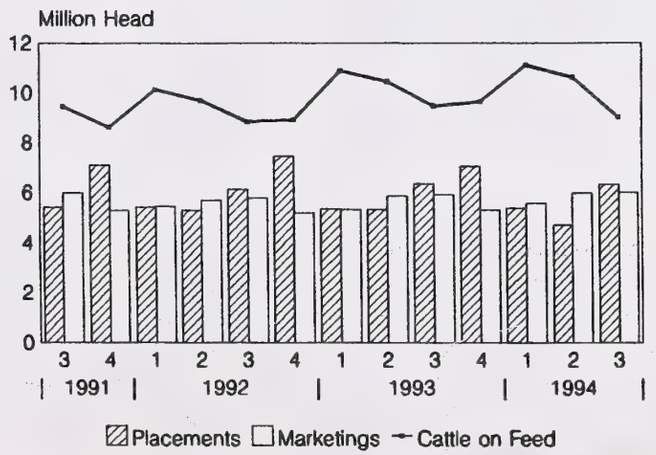
Cattle and calves on feed for slaughter market in the 13 States preparing quarterly estimates totaled 9.14 million head, down 5 percent from a year ago but up 2 percent from October 1, 1992. The inventory included 6.07 million steers and steer calves, down 3 percent from a year ago but 3 percent above two years ago. This group accounts for 66.4 percent of the total inventory. Heifers and heifer calves accounted for 3.03 million head, 9 percent below a year ago.

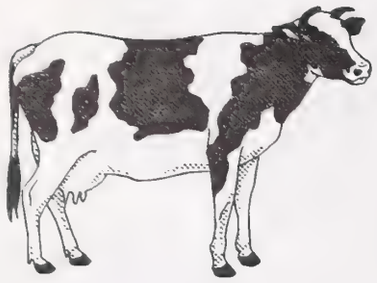
Placements of cattle and calves on feed in the 13 States during the July-September 1994 quarter totaled 6.30 million, down 1 percent from last year but 3 percent above July-September 1992. Net placements of 6.10 million for July-September were 1 percent above last year and 5 percent above July-September 1992.

Marketings of fed cattle during the July-September 1994 quarter totaled 5.99 million, up 2 percent from the same quarter last year and 4 percent above two years ago.

Other disappearance totaled 191,000 head compared to 270,000 in July-September 1993 and 268,000 in July-September 1992.

CATTLE ON FEED, PLACEMENTS, MARKETINGS BY QUARTERS FOR 13 STATES
(AZ, CA, CO, ID, IA, IL, KS, MN, NE OK, SD, TX, WA)





QUARTERLY MILK PRODUCTION

Montana milk production was 79 million pounds for the July - September quarter of 1994, 1 million pounds above the previous quarter and the same as a year ago. The average number of milk cows on hand declined to 21,000 head, down 1,000 head from a year ago.

An average of 17.3 pounds of grain and other concentrates were fed per cow by Montana dairymen on October 1, up 16.6 pounds from a year ago. The value of grain and concentrates fed was $7.30 per hundred weight, up 10 cents from last year.

The quarterly production of milk for the U.S. was 38.4 billion, 3 percent above the July - September period last year. The average number of milk cows in the U.S. during the July-September quarter was 9.66 million head, 19,000 head less than the same period a year ago.

Grain and other concentrates fed to milk cows on October 1, 1994 averaged 18.7 pounds per cow, 0.9 pound more than a year ago. The value of grain and other concentrates fed to cows on October 1, averaged $7.87 per hundredweight, 5 cents less than last year.

SEPTEMBER EGG PRODUCTION UP 4 PERCENT

U.S. egg production totaled 6.11 billion during September 1994, up 4 percent from the 5.88 billion produced a year ago. Production included 5.21 billion table eggs, 849 million broiler-type hatching eggs, and 57.0 million egg-type hatching eggs. The total number of layers during September 1994 averaged 293 million, up 3 percent from the 283 million a year ago. September egg production per 100 layers was 2,085 eggs, compared with 2,073 in September 1993.

All layers in the U.S. on October 1, 1994, totaled 295 million, compared with 285 million a year ago. The 295 million layers consisted of 244 million layers producing table or commercial type eggs, 48.1 million layers producing broiler-type hatching eggs, and 2.75 million layers producing egg-type hatching eggs. Rate of lay per day on October 1, 1994, averaged 69.2 eggs per 100 layers, the same as a year ago.

Laying flocks in the 30 major egg production States produced 5.78 billion eggs during September. The number of layers during September averaged 278 million.

MONTANA RESERVATION LAND AND NATIVE AMERICAN AGRICULTURAL SURVEY-1994

There were 900 Native American farms and ranches on Montana's seven reservations on June 1, 1994. Land in Native American farms and ranches amounted to 2.6 million acres with an average size of 2,889 acres. This compares to a total of 2,900 farms and ranches on the seven reservations with a total land in farms of 7.6 million acres and an average size of 2,621 acres. Only 450,000 acres of the 2.4 million acres of cropland were operated by Native American operators.

Spring wheat, at 105,000 acres, was the largest crop grown by Native American operators on the seven reservations. Barley was second, at 75,000 acres, followed by other hay at 50,000 acres. Spring wheat, at 525,000 acres, also accounted for most of the crop acreage planted by all operators on the reservations. Barley acreage totaled 210,000 acres followed closely by 200,000 acres of winter wheat.

There were 150,000 cattle and calves (35 percent of all cattle and calves on the seven reservations) on Native American farms and ranches on June 1, 1994. Beef cows and calves accounted for 92 percent of the inventory, numbering 70,000 and 68,000 head, respectively. Cattle and calves on all reservation land amounted to 430,000 head with beef cows and calves making up 86 percent of the inventory.

Native Americans owned 13,600 of the 21,000 sheep and lambs on the seven reservations. A total of 5,000 horses and ponies were on Native American farms and ranches. The largest category for horses was ranch use with 2,100 head. There was a tie for second place between horses used for brood stock and horses used for all other purposes, each totalling 1,000 head.

Additional information collected during the survey included land values, cash rents, grazing fees, types of farms, and types of operating arrangements.

This survey was undertaken at the request of the Intertribal Agricultural Council who also provided funding. The Montana Agricultural Statistics Service conducted the survey and expresses appreciation to all the farmers and ranchers that participated in the survey. For additional information please call the Montana Agricultural Statistics Service at 1-800-835-2612 or write MASS, P.O. Box 4369, Helena, Montana 59604.

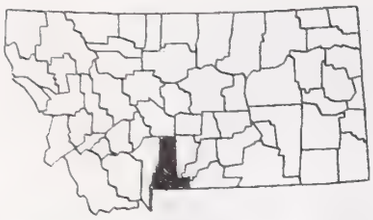
featuring...PARK COUNTY



Park County is located in south central Montana, along the Montana/Wyoming border. Almost the entire southern boundary of the county makes up the northern border of Yellowstone Park. The Yellowstone and Shields Rivers traverse the length of Park County and join near Livingston, Montana where they continue east into neighboring Sweet Grass County. Nearly two-thirds of the county is blanketed by the mountains of the Gallatin National Forest, which includes a major portion of the Absaroka-Beartooth Wilderness Area. The highest point in Montana, Granite Peak, with an elevation of 12,799 feet is located in eastern Park County.

Farmers harvested crops from 48,900 acres of irrigated land in Park County in 1993, compared with 28,800 acres of dryland crops. The major crop produced is hay, followed by winter wheat and barley. Cash receipts from the sale of crop items brought Park County $4,658,000 in 1992.

Cattle, sheep, and hogs are all raised in the county. Receipts from the sale of livestock and livestock products contributed $17,883,000 to the county's economy in 1992. Government payments added $1,442,000 making a total of $23,983,000 from Park County's agricultural production.

SMALL GRAINS SUMMARY AND OCTOBER FORECAST OF LATE SEASON CROPS

Montana's 1994 all wheat crop of 169.1 million bushels is 17 percent less than last year's record production, even though spring wheat other than durum came in at record production. Winter wheat production is 64.75 million bushels compared with 102.9 million last year. There were 1.85 million acres harvested with an average yield of 35 bushels, 7 bushels below last year's record yield. There were 3.3 million acres of spring wheat harvested, not including durum, producing 99.0 million bushels, exceeding last year's record crop by 1 percent. Production of durum wheat is placed at 5.3 million bushels, up from 3.5 million last year.

Barley production is 52.8 million bushels, down from 63.8 million produced in 1993. Barley harvested acres of 1.2 million are down 100 thousand acres from last year, and the yield of 44 bushels is 14 bushels below the 1993 record yield. There were 3.6 million bushels of oats produced from 75,000 acres harvested. The average yield is 48.0 bushels, down significantly from last year's record of 65.0 bushels.

The 1994 small grain crops generally started off well, benefiting from soil moisture reserves from the very wet 1993 season. The lack of significant rainfall since mid-June placed considerable stress on all crops as they matured. The winter wheat crop had the best yields because of its characteristic of early development and no spring soil disturbance. Spring grains started out well, but the moisture situation reduced prospects monthly.

Limited summer and fall precipitation has kept Montana producers from seeding their 1995 winter wheat crop. They have seeded about 48 percent of the intended acreage by October 9 compared with the 5-year average of 75 percent normally seeded by this time.

Sugar beet estimated yield decreased by one-half ton from the September 1 forecast to 22.5 tons per acre. Producers expect to harvest 1.2 million tons of beets this season. Hay production remains unchanged from the August 1 forecast. All hay production is estimated at 4.8 million tons down nearly 9 percent from a year ago. Alfalfa, at 3.6 million tons, is down about 5 percent from 1993 and other hay is down nearly 19 percent from last year at 1.2 million tons.

U.S. all wheat production for 1994 totaled 2.32 billion bushels, down 2 percent from September 1 and 3 percent less than 1993. Winter wheat production for 1994 was estimated at 1.66 billion bushels, down slightly from August 1 and down 6 percent from 1993. Production for 1994 other spring wheat was estimated at 561 million bushels, down 5 percent from the September forecast and down 1 percent from 1993. Durum production, estimated at 94.1 million bushels, rose 34 percent from 1993.

Barley production in 1994 was estimated at 375 million bushels, 6 percent below last year's crop of 400 million bushels. Average yield per acre, at 56.2 bushels, was down 2.7 bushels from the 1993 crop average. Production of oats in 1994 was estimated at 230 million bushels, 11 percent above last year's record low crop of 206 million bushels. Yields per acre harvested for grain averaged 57.2 bushels, up 2.8 bushels from 1993.

U.S. corn production is forecast at a record high 9.60 billion bushels, up 4 percent from the September 1 forecast and 51 percent above 1993. Based on conditions as of October 1, yields are expected to average a record high 133.8 bushels per acre. U.S. soybean production is forecast at a record high 2.46 billion bushels as of October 1. Yield is forecast at a record high 40.5 bushels per acre.

OCTOBER 1 PASTURE & RANGE FEED CONDITION

Warm, dry conditions remained through most of September bringing Montana's pasture and range feed condition rating down to 69 percent of normal on October 1, 1994. This is a 32 point decrease from last year's above normal reading and the lowest rating for this period since 1988. All districts are down from a year ago with the southwest district showing the greatest decrease of 64 points and the south central district showing the smallest decrease of 20 points.

PRICES RECEIVED

Montana crop prices for the full month of August were mixed, compared with the previous month. Winter wheat was down 2 cents to $2.96, and other spring wheat decreased 21 cents to $3.30 per bushel. Durum wheat rose 3 cents to $5.87 per bushel. All barley, at $2.29, was 16 cents higher than the July price. At $1.28, oats averaged 14 cents below the previous month. Alfalfa hay increased $3.00 to $69.00 per ton, and other hay went up $1.00 to $60.00 per ton. The all wheat price for mid-month September averaged $3.54 per bushel while the all barley price was $2.30.

Livestock producers experienced higher prices for the full month of August, with the exception of sheep and lambs. Prices received for sheep averaged $3.70 below last month at $26.70 and lambs dropped 30 cents to $71.60 per cwt. Cow prices were up 10 cents to $44.60 per cwt, and the average price for steers and heifers increased $3.10 to $73.60 per cwt. Calf prices rose $3.10 to $85.80 per cwt. Milk prices remained the same at $12.80 per cwt. Steer and heifer prices for mid-month September averaged $77.00 per cwt.

At the national level, steer and heifer prices averaged $68.30 per cwt for the full month of August. Cow prices came in at $43.10 and hogs were $41.80 per cwt. The U.S. all wheat price was $3.25 per bushel and $2.05 per bushel for all barley. Egg prices were 59.9 cents per dozen.

The September All Farm Products Index of Prices Received was 134 based on 1977=100, down 3 points (2.2 percent) from August 1994. Price declines from August for cattle, hogs, potatoes, and oranges, more than offset price gains for wheat, milk, lettuce, and tobacco.

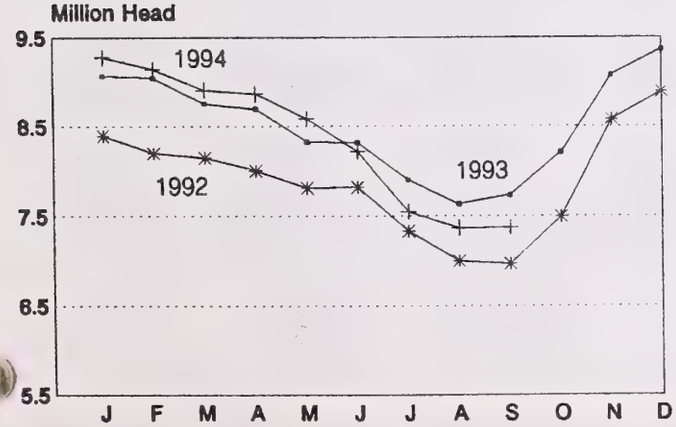
CATTLE ON FEED DOWN 5 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 7.38 million head, down 5 percent from a year ago but up 6 percent from September 1, 1992.

Placements in feedlots during August totaled 1.79 million, 4 percent below 1993 but 9 percent above 1992. **Net placements** of 1.74 million for August were down 3 percent from last year but 11 percent above 1992.

Marketings during August totaled 1.73 million, up 3 percent from 1993 and up 9 percent from 1992. **Other disappearance** during August was 56,000 head, 27 percent below last year and 31 percent below 1992.

CATTLE ON FEED
7 STATES
(AZ, CA, CO, IA, KS, NE, TX)



RED MEAT PRODUCTION FOR AUGUST

Montana slaughter plants produced 2.19 million pounds, dressed weight, of red meat during August 1994, up 37 percent from the previous month and 19 percent from a year ago. The number of cattle slaughtered, at 2,400 head, rose 600 head from last year, but average live weight, at 1,190 pounds, decreased 49 pounds from a year ago.

A total of 3,400 hogs were slaughtered in August, down 200 head from a year earlier. The average live weight for hogs increased 10 pounds over last year to 236 pounds. The number of sheep slaughtered increased 100 head from 1993 to 800 head, while the average live weight increased 5 pounds to 116 pounds.

U.S. commercial red meat production totaled a record high 3.76 billion pounds during August, up 7 percent from the previous record high set in August 1988. Beef production totaled 2.22 billion pounds, up 7 percent from last year. Head kill totaled 3.06 million, up 4 percent from a year ago. The average live weight increased 31 pounds to 1,204 pounds.

Veal production totaled 24.0 million pounds, up 4 percent from last year. Calf slaughter totaled 107,900 head, a 10 percent increase from the previous year. The average live weight was down 21 pounds to 379 pounds.

Pork production, at 1.49 billion pounds, was up 7 percent from the record high set in August 1993. Hog kill totaled 8.19 million head, 7 percent above a year earlier. The average live weight increased 1 pound to 252 pounds.

Lamb and mutton production, at 24.0 million pounds, was down 12 percent from a year ago. Slaughter totaled 400,000 head, down 8 percent from last year. The average live weight decreased 5 pounds to 120 pounds.

January-August red meat production was 27.6 billion pounds, up 4 percent from the comparable period a year earlier. Accumulated beef production jumped 6 percent, veal increased 3 percent, pork rose 1 percent, but lamb and mutton dropped 7 percent.

SEPTEMBER 1 GRAIN STOCKS

Montana wheat stocks on September 1, 1994, were estimated to be 194 million bushels, 9 percent less than last year, but 14 percent above the 10-year average.

All wheat on farms, at 165.0 million bushels, was down 15 percent from last year, but off-farm stocks were up 53 percent. All wheat disappearance in the June through August quarter was 62 percent more than the 10-year average. This year's early harvest and last year's large crop were the main factors in the increased disappearance. Winter wheat stocks, at 79 million bushels, were 16 percent below a year ago and all spring wheat stocks, at 115 million, were down 4 percent. There were 5.3 million bushels of durum wheat in Montana storages, down 27 percent from last September's stocks.

Barley stocks, in all locations on September 1, were placed at 51.5 million bushels down 19 percent from last September. Barley on the farm, at 45.0 million bushels, fell 25 percent from last year. Off-farm inventory was up 81 percent. Oat stocks, at 3.69 million bushels, were down 22 percent from last year. Oat stocks on the farm were 26 percent above last year.

U.S. all wheat stocks in all positions September 1, 1994, were estimated at 2.06 billion bushels, down 3 percent from September 1, 1993. Farm stocks, at 855 million bushels, were down 13 percent from last September. Off-farm stocks total 1.20 billion bushels, up 6 percent. The June-August disappearance was 870 million bushels.

Durum wheat stored in all positions on September 1, 1994, totaled 92.0 million bushels, 12 percent less than September 1, 1993. Of the total, 74.7 million bushels were on farms, 11 percent below last year. The indicated first quarter disappearance was 29.9 million bushels.

Barley stocks in all positions on September 1, 1994, were estimated at 350 million bushels, 13 percent below the stocks of September 1, 1993. Of the total barley stocks on hand, 220 million were stored on farms, 21 percent below a year earlier. Off-farm stocks, at 130 million bushels, were 4 percent above last year.

Oats stored in all positions on September 1, 1994, were estimated at 220 million bushels, up slightly from a year earlier. Of the total oat stocks on hand, 144 million bushels were stored on farms, 10 percent below last year. Off-farm stocks totaled 75.7 million bushels, 31 percent above last year.

1993 POTATO DISPOSITION

Montana's 1993 potato production totalled 2.7 million cwt, 9 percent above last year and 3 percent below 1991. Montana farmers harvested 9,000 acres, up 500 from the previous year, but down 300 acres from 1991. Yield per acre increased 10 cwt from 1992 to 300 cwt, the same as 1991.

Value of production from the 1993 crop amounted to 24.2 million dollars, an increase of 17 percent from 1992. The average price was $8.95 per cwt, up $.55 from the previous year's crop.

Sales of Montana's 1993 potato crop totaled 21.5 million dollars, a 14 percent increase from the 1992 crop. Producers sold 2.4 million cwt from the 1993 crop compared with 2.2 million cwt from the 1992 crop.

Total 1993 potato production for the U.S. was estimated at 429 million cwt, 1 percent above a year earlier and 3 percent above 1991. Harvested area, at 1.32 million acres, was up slightly from last year, but dropped 4 percent below two years ago. The average yield hit a record high 326 cwt per acre, up 3 cwt from a year ago and 22 cwt above 1991. These are the third consecutive record highs for yield and production.

Value of production was estimated at $2.64 billion from the 1993 crop, 13 percent more than a year earlier and 29 percent above 1991. Value ranked second to the crop of 1989 when $2.72 billion was taken by growers. The average price was $6.18 per cwt compared with $5.52 from the 1992 potato crop.

Sales from the 1993 potato crop totaled 393 million cwt, up 2 percent from 1992 and 4 percent above 1991. Non-sales accounted for 36.1 million cwt of 1993 potatoes, down 9 percent from the previous year and 6 percent less than 1991. Typically, 91 percent of potatoes produced are sold (based on the past 5-year average). The other 9 percent are either lost (shrinkage and loss) or used for seed, home use and livestock feed on farms where grown. In the 1993 season, farmers sold 91.6 percent of their crop and kept or lost 8.4 percent. Shrinkage and loss was estimated at 30.2 million cwt, 11 percent below the previous season and 7 percent below 1991 losses. Livestock feed and home use totaled 1.13 million cwt, down 4 percent. Growers kept 4.80 million cwt for seed on their own farms, up 1 percent from the previous year.

Processors used a record high 241 million cwt of potatoes, up 5 percent from 1992 and 7 percent above the 1991 usage. Table stock totaled 125 million cwt, down 2 percent from last year, while other sales (seed and livestock feed) of 26.4 million cwt were down 10 percent. Chip potato use, at 48.6 million cwt, was up fractionally from a year earlier. Freezing potatoes, totaling a record high 146 million cwt, jumped 8 percent and dehydrating claimed a record high 40.8 million cwt, a 7 percent gain. Canning use totaled 4.34 million cwt, down 18 percent. Starch, flour, and other products were made from 1.43 million cwt of potatoes, a drop of 11 percent.

AUGUST MILK PRODUCTION UP 2 PERCENT

Milk production in the 21 major States during August totaled 10.8 billion pounds, 2 percent above production in these same States in August 1993. July revised production, at 11.0 billion pounds was 1 percent more than July 1993.

Production per cow in the 21 major States averaged 1,344 pounds for August, 38 pounds above August 1993. The number of cows on farms in the 21 major States was 8.03 million head, 65,000 head less than August 1993 but 3,000 head more than July 1994.

During the April-June period, the 21 major States produced 33.5 billion pounds of milk, 83.8 percent of the U.S. production. If the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 12.9 billion for August 1994.

The Montana grain stocks and U.S. hogs and pigs estimates in this issue of the Reporter are the result of surveying approximately 1,800 Montana farmers and ranchers during September. Names were selected on a statistical probability basis. SPECIAL THANKS to those operators that were interviewed and responded to this survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

SEPTEMBER 1 HOG & PIG INVENTORY

U.S. inventory of all hogs and pigs on September 1, 1994 was estimated at 61.6 million head, 4 percent above last year and 2 percent above September 1, 1992. This was the largest September 1 inventory since quarterly U.S. level estimates began in 1988 and the highest inventory level, considering all quarters, since June 1980. The higher inventory resulted from increases by large producers which more than offset inventory declines among smaller operators.

Breeding inventory, at 7.39 million head, was 4 percent above last year and 1 percent above two years ago. Market hog inventory, at 54.2 million head, was 5 percent above a year ago and 2 percent above September 1, 1992.

The June-August 1994 U.S. pig crop was 25.5 million head, 6 percent more than last year and 4 percent above the same period in 1992. This was the largest June-August pig crop since 1979. Sows farrowing during June-August 1994 totaled 3.10 million, up 4 percent from last year and 3 percent above the same period in 1992. Pigs saved per litter were a record high for the quarter, at 8.22, compared with 8.09 during the same period in 1993. Pigs saved per litter, during June-August 1994, by size of operation ranged from 7.30 for those operations with 1-99 head to 8.70 pigs per litter for operations with 2,000 head or more.

AUGUST EGG PRODUCTION UP 4 PERCENT

U.S. egg production totaled 6.26 billion during August 1994, up 4 percent from the 6.02 billion produced a year ago. Production included 5.33 billion table eggs, 876 million broiler-type hatching eggs, and 59.0 million egg-type hatching eggs. The total number of layers during August 1994 averaged 290 million, up 3 percent from the 282 million a year ago. August egg production per 100 layers was 2,158 eggs, compared with 2,131 in August 1993.

All layers in the U.S. on September 1, 1994, totaled 292 million, compared with 282 million a year ago. The 292 million layers consisted of 241 million layers producing table or commercial type eggs, 48.3 million layers producing broiler-type hatching eggs, and 2.63 million layers producing egg-type hatching eggs. Rate of lay per day on September 1, 1994, averaged 69.7 eggs per 100 layers, down slightly from last year's 69.9.

Laying flocks in the 30 major egg production States produced 5.91 billion eggs during August. The number of layers during August averaged 274 million.

August 1994 Crop Production

The hot dry weather for the past month took its toll on Montana'a 1994 wheat crop. The August 1 forecast for all wheat is 173.0 million bushels, down nearly 13% from the July 1 forecast and down 15% from last year's record crop.

The winter wheat crop, mostly made before the hot dry weather, is forecast at 68.5 million bushels, down over 33% from last year. The forecasted yield per acre is 37 bushels, down 1 bushel from the July 1 forecast and down 5 bushels from a year ago.

The weather had the most effect on the spring wheat crop. The forecast yield is estimated to be 30 bushels, 7 bushels below both last month and last year. Forecast production is 99.0 million bushels, up nearly 1 million bushels from a year earlier due to the big increase in acreage.

Durum wheat production is forecast to be 5.5 million bushels, up over 56% percent from a year ago. Yield per acre is forecast at 31 bushels unchanged from last year, but 2 bushels below the July 1 forecast.

Barley production, forecast at 54.0 million bushels, is down nearly 15% from 1993. Forecasted yield is 47 bushels per acre down 11 bushels from last year and down 8 bushels from July 1. Oat production is set at 4.3 million bushels, down 5% from a year ago. Yield per acre is set at 54 bushels per acre down 11 bushels from 1993.

Corn harvested for grain is forecast at 2.8 million bushels, over three times larger than last year's crop. Dry bean production is expected to be up 29% from a year ago with production of 200,000 hundred weight. Sugar beet production is forecast to be slightly more than last year with 1.2 million tons.

Hay production is forecast at 4.8 million tons, down nearly 9% from a year earlier. Alfalfa, at 3.6 million tons, is down about 5% from 1993 and other hay, at 1.2 million tons, is down nearly 19% from last year.

U.S. wheat production is forecast at 2.39 billion bushels, down 1 percent from both July 1 and 1993. Yields are expected to average 38.5 bushels per acre, off 0.5 bushels from July 1 but 0.2 bushels above last year. Winter wheat production is 1.67 billion bushels, up 1 percent from July 1 but 6 percent less than 1993. Yields are expected to average 40.3 bushels per acre, up 0.3 bushels from last month and equaling last year's average. Other spring wheat production is forecast at 618 million bushels, down 6 percent from the July forecast but up 9 percent from 1993. U.S. yields are forecast at 34.6 bushels per acre, down 2.4 bushels from last month. The 1993 average was 33.7 bushels per acre.

Total barley production is forecast at 389 million bushels, down 4 percent from last month and 3 percent below 1993. The expected yield per acre is forecast at 56.8 bushels, down 2.5 bushels from July 1 and 2.1 bushels below last year. Corn production is forecast at 9.21 billion bushels, up 45 percent from the flood ravaged 1993 production but 3 percent below the record high production of 1992. Based on August 1 conditions, yields are expected to average 128.4 bushels, up 27.7 bushels from last year.

August 1 Pasture and Range Feed Condition Shows Decline from Last Year

The dry weather and above normal temperatures over most of the state are having an impact on Montana's pasture and range feed condition, it was rated at 84 percent of normal on August 1, 1994. This is a 8 point decrease from last month and an 18 point decrease from a year ago. The northwest and north central district dropped the most from a month ago with the northwest decreasing by 25 points. The south central district changed the least from a month ago with only a 3 point decrease.

[1] District data funded by the Montana Wheat & Barley Committee. [2] Preliminary.

July Prices Received

Montana crop prices for the full month of June were lower, compared with the previous month, except for spring wheat, oats, and all other hay. Winter wheat decreased 11 cents to $3.14, and durum wheat dropped 28 cents to $6.02 per bushel. Other spring wheat rose 30 cents to $3.78 per bushel.

All barley, at $1.90, was 25 cents lower than the May price. At $1.50, oats averaged 4 cents above the previous month. Alfalfa hay decreased $1.00 to $64.00 per ton, while other hay jumped $2.00 to $56.00 per ton. The all wheat price for mid-month July averaged $3.52 per bushel, while the all barley price was $1.94.

Livestock producers experienced lower prices for the full month of June, with the exception of sheep and lambs. Prices received for sheep increased $1.50 to $31.30 per cwt, while prices for lambs averaged $64.20, $16.90 above last month. Cow prices were down $1.10 to $45.30 per cwt, and the average price for steers and heifers decreased $2.00 to $71.40 per cwt. Calf prices fell $3.10 to $86.20 per cwt. Milk prices increased 10 cents to $14.00 per cwt.

Steer and heifer prices for the U.S. averaged $64.70 per cwt during June, down $5.00 from May. Hogs averaged $42.60 per cwt, the same as a month earlier. Egg producers received 58.2 cents per dozen, unchanged from May. The U.S. average for winter wheat was $3.09, down 9 cents from May's average, while spring wheat averaged $3.53, down 10 cents. Durum wheat averaged $4.57 during June, down from $44.93 in May. U.S. barley averaged $1.91 per bushel, 20 cents less than the May average.

Number of Farms & Land in Farms down from Last Year

The number of farms and ranches in Montana in 1994 is estimated at 23,100, down 700 from last year. There are 100,000 acres less farmland compared with a year ago, land in farms is estimated at 59.7 million acres.

The number of farms in the United States in 1994 is estimated at 2.04 million, down 1 percent from 1993. Total land in farms is 975 million acres, down 2.9 million acres from last year. The rate of decline in number of farms followed the historical trend while the land in farms declined marginally. The average farm size increased from 473 acres in 1993 to 478 in 1994.

Texas remains the state with the most farms at 185,000, unchanged from a year earlier. Missouri is second with 104,000 farms, down 2,000 from last year, followed by Iowa with 100,000 farms, unchanged from 1993. New Jersey is the only state showing an increase in farm numbers, up 100 farms from last year.

Seven states that showed decreases of 2,000 farms from last year were Arkansas, Georgia, Illinois, Kentucky, Minnesota, Missouri, and Tennessee.

Texas continued to lead the nation in land in farms and ranches with 129.3 million acres, down 700,000 from 1993. Six states with decreases of 200,000 acres in agricultural land from a year ago include California, Louisiana, Missouri, New York, Washington, and Wisconsin.

July Cattle Inventory
1994 Lamb Crop
Quarterly Mink Production
Quarterly Egg Production
Red Meat Production
Quarterly Cattle on Feed

JULY 1 CATTLE INVENTORY UP 2 PERCENT

All cattle and calves in the United States as of July 1, 1994, totaled 112.5 million head, up 2 percent from July 1, 1993, and up 3 percent from the 109.2 million two years ago.

All cows and heifers that have calved, at 45.9 million, were up 2 percent from a year ago and 3 percent above two years ago.

Beef cows, at 36.3 million, were 3 percent above July 1, 1993, and 5 percent above July 1, 1992. Milk cows, at 9.60 million, were 2 percent below July 1, 1993, and 3 percent below two years ago.

Other class estimates on July 1, 1994, and the changes from July 1 last year and two years ago, respectively, are as follows:

-- All heifers 500 pounds and over, 17.3 million, up 1 percent and up 2 percent.

-- Beef replacement heifers, 6.00 million, up 3 percent and up 5 percent.

-- Milk replacement heifers, 4.10 million, unchanged and down 2 percent.

-- Other heifers, 7.20 million, down 1 percent but up 1 percent.

-- Steers weighing 500 pounds and over, 15.4 million, up 1 percent and up 2 percent.

-- Bulls weighing 500 pounds and over, 2.30 million, up 5 percent from the previous two years.

-- Calves under 500 pounds, 31.6 million, up 3 percent and up 4 percent.

-- All cattle and calves on feed for slaughter, were 10.5 million head. This is the first July 1 U.S. cattle on feed estimate.

CALF CROP UP 2 PERCENT

The 1994 calf crop is expected to be 40.6 million, up 2 percent from 1993 and 3 percent above 1992. Calves born during the first half of the year are estimated at 29.7 million, up 3 percent from both 1993 and 1992.

CATTLE AND CALVES: NUMBER BY CLASS AND CALF CROP, UNITED STATES, JULY 1, 1992-94

Class	1992	1993	1994	1994 as % 1993
		1,000 Head		Percent
Cattle and Calves	109,200	110,600	112,500	102
Cows and Heifers That Have Calved	44,400	45,200	45,900	102
Beef Cows	34,550	35,400	36,300	103
Milk Cows	9,850	9,800	9,600	98
Heifers 500 Pounds and Over	17,000	17,200	17,300	101
For Beef Cow Replacement	5,700	5,800	6,000	103
For Milk Cow Replacement	4,200	4,100	4,100	100
Other Heifers	7,100	7,300	7,200	99
Steers 500 Pounds and Over	15,100	15,200	15,400	101

Calf Crop 1/	39,290	39,640	40,600	102

1/ For the current year, the calf crop is the number of calves born before July 1 plus the number expected to be born on and after July 1.

PLEASE RETURN

1994 LAMB CROP TOTALS 6.15 MILLION HEAD

The 1994 lamb crop in the United States is expected to total 6.15 million head, 3 percent below the 1993 lamb crop of 6.31 million head. The July 1, 1994, inventory of ewes one year old and older, at 5.65 million head, was 2 percent below the January 1, 1994, inventory of 5.79 million head.

Lambs per 100 ewes one year old and older on January 1, 1994, was 106 percent, compared with 98 percent for the 1993 crop. The Upper Midwest (Iowa, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota) had the highest percentage with 121, while the Southwest (Arizona, New Mexico, Oklahoma, and Texas) had the lowest with 88 percent.

On July 1, 1994, 4.42 million lambs, including the 1994 crop, were intended for market with 80 percent being under 85 pounds, 13 percent at 85 to 105 pounds, and the remainder over 105 pounds. Market sheep totaled 79,000 head. Total inventory of stock and market sheep and lambs was 11.50 million head.

U.S. PELT PRODUCTION DOWN 13 PERCENT

Mink pelt production in the United States in 1993 totaled 2.53 million pelts, down 13 percent from 1992. Utah, the major mink producing State, produced 600,000 pelts. By color class, the number of pelts as a percent of the total U.S. production follows: Standard - 45.3 percent; Mahogany - 15.1 percent; Ranch Wild - 13.8 percent; Gunmetal - 9.1 percent; Demi-buff - 8.5 percent. The remaining color classes accounted for 8.2 percent.

Mink pelts produced during the 1993 crop year were valued at $86.2 million, up 25 percent from $69.0 million a year ago. The average price per pelt for the 1993 crop year was $34.10, compared with $23.80 in 1992.

Female mink bred to produce kits in 1994 totaled 712,800, up 1 percent from the previous year. Percent of total females bred to produce kits in 1994 by color class are: Standard - 51.3 percent; Mahogany - 13.7 percent; Ranch Wild - 11.8 percent; Gunmetal - 8.9 percent; Demi-buff - 6.4 percent. The remaining color classes accounted for 7.9 percent.

There were 502 mink farms producing pelts in 1993, down 12 percent from a year ago. Leading States were Utah with 145 farms, Wisconsin with 87, and Minnesota with 59. There were 58 mink farms which also raised fox in 1993, compared to 57 for the previous year.

JUNE EGG PRODUCTION UP 3 PERCENT

U.S. egg production totaled 5.96 billion during June 1994, up 3 percent from the 5.82 billion produced a year ago. Production included 5.06 billion table eggs, 846 million broiler-type hatching eggs, and 60.0 million egg-type hatching eggs. The total number of layers during June 1994 averaged 287 million, up 2 percent from the 281 million a year ago. June egg production per 100 layers was 2,078 eggs, compared with 2,072 in June 1993.

All layers in the U.S. on July 1, 1994, totaled 286 million, compared with 281 million a year ago. The 286 million layers consisted of 236 million layers producing table or commercial type eggs, 47.9 million layers producing broiler-type hatching eggs, and 2.70 million layers producing egg-type hatching eggs. Rate of lay per day on July 1, 1994, averaged 69.3 eggs per 100 layers, up fractionally from last year's 69.0.

RED MEAT PRODUCTION FOR JUNE

Montana slaughter plants produced 1.79 million pounds, dressed weight, of red meat during June 1994, up 9 percent above the previous month, and 18 percent higher than last year. The number of cattle slaughtered, at 2,100 head, rose 500 head from last year and average live weight, at 1,250 pounds, decreased 29 pounds from a year ago.

A total of 2,200 hogs were slaughtered in June, 200 less than a year ago. Average live weight increased 8 pounds over last year to 241 pounds. The number of sheep and lambs slaughtered during the month, at 200 head, was the same as last year. The average live weight was 113 pounds, 6 pounds lighter than a year ago.

Commercial red meat production for the United States totaled a record high 3.62 billion pounds during June. Production was 4 percent above the previous record high set in June 1993.

Beef production totaled 2.16 billion pounds, up 5 percent from last year. Head kill totaled 3.04 million, up 1 percent from a year earlier. The average live weight increased 35 pounds to 1,178 pounds.

Veal production totaled 24.0 million pounds, up 7 percent from a year earlier. Calf slaughter totaled 100,700 head, up 7 percent from the previous year. The average live weight was down 10 pounds to 400 pounds.

Pork production, at 1.41 billion pounds, was up 2 percent from a year ago. Hog kill totaled 7.63 million head, 2 percent above last year. The average live weight increased 1 pound to 256 pounds.

Lamb and mutton production, at 24.0 million pounds, was down 22 percent from a year earlier. Slaughter totaled 391,900 head, down 18 percent from last year. The average live weight decreased 4 pounds to 126 pounds.

January-June red meat production was 20.5 billion pounds, up 4 percent from the comparable period a year earlier. Accumulated beef production was up 7 percent, veal was up 4 percent, pork was up 1 percent, but lamb and mutton was down 3 percent.

MONTANA WHEAT & BARLEY VARIETIES

Montana's wheat and barley varieties report was made possible with funds provided by the Montana Wheat & Barley Committee and the American Malting Barley Association, Inc. A more detailed varietal report may be obtained from our office upon request.

QUARTERLY MILK PRODUCTION

Montana milk production was 78 million pounds for the April - June quarter of 1994, down 2 million from the same quarter last year, but 6 million pounds above last quarter. The average number of milk cows on hand declined to 21,000 head, down a 1,000 head from June 1993.

An average 17.4 pounds of grain and other concentrates were fed per cow on July 1, 1994, up from 17.3 pounds last July. The value of grain and concentrates fed was $7.50 per cwt., down 5 cents from last July's average.

The quarterly production of milk for the U.S. was 40.0 billion pounds, 1 percent above the April-June period last year. The average number of milk cows in the U.S. during the April-June quarter was 9.64 million head, 89,000 less than the same period last year.

Grain and other concentrates fed to milk cows on July 1, 1994, averaged 18.2 pounds per cow, 0.6 of a pound more than July 1, 1993. The value of grain and other concentrates fed to cows on July 1, averaged $8.10 per cwt., $0.39 more than the price on July 1, 1993.

CATTLE ON FEED DOWN 5 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed for slaughter market in the 13 States preparing quarterly estimates totaled 9.02 million head, down 5 percent from a year ago, but up 2 percent from July 1, 1992. The inventory included 5.92 million steers and steer calves, down 2 percent from a year ago, but 3 percent above two years ago. This group accounts for 65.6 percent of the total inventory. Heifers and heifer calves accounted for 3.06 million head, 9 percent below a year ago.

Placements of cattle and calves on feed in the 13 States during the April-June 1994 quarter totaled 4.67 million, down 12 percent from last year and 11 percent below April-June 1992. Net placements of 4.34 million for April-June were 11 percent below last year and 10 percent below April-June 1992.

Marketings of fed cattle during the April-June 1994 quarter totaled 5.95 million, up 2 percent from the same quarter last year and 5 percent above two years ago. Other disappearance totaled 329,000 head compared to 460,000 in April-June 1993 and 444,000 in April-June 1992.

JULY 1 CROP PRODUCTION FORECAST

Montana's 1994 wheat crop is expected to be 198.3 million bushels, down 3 percent from last year's record production. The estimated yield is 37.2 bushels per acre, a 2 bushel decrease from last year. Growers expect to harvest 5.3 million acres, 2 percent more than in 1993.

Montana farmers expect to produce 70.3 million bushels of winter wheat, down 32 percent from last year's record crop. Hard red spring wheat production is expected to be a record 122.1 million bushels, up 25 percent from 1993. Durum wheat production is estimated to be 5.9 million bushels, up 66 percent from a year ago.

Barley production forecast, at 63.3 million bushels, is down 1 percent from 1993. Oat production is forecast to be slightly above last year at 4.6 million bushels.

U.S. all wheat production for 1994 is forecast at 2.42 billion bushels, up 1 percent from 1993. Harvested area is forecast at 62.0 million acres, down 1 percent from last year. The 1994 yield is expected to average 39.0 bushels per acre, up 0.7 bushels from last season.

Winter wheat production is forecast at 1.66 billion bushels, down 1 percent from June 1, mainly due to a reduction in the forecasted acreage for harvest, and down 6 percent from 1993. Yields are now expected to average 40.0 bushels per acre, up 0.3 bushels from last month, but down 0.3 bushels from last season.

Other spring wheat production is forecast at 660 million bushels, up 17 percent from 1993. Yield is forecast at 37.0 bushels per acre, up 3.3 bushels per acre from a year ago.

Total U.S. durum production is forecast at 101 million bushels, up 47 percent from last year's reduced crop and 4 percent higher than the 1992 crop. Yields are forecast at 38.3 bushels per acre, up 4.7 bushels per acre from 1993. If realized this will be second only to 1992's record high of 39.7 bushels per acre. Harvested area is 2.64 million bushels, up 29 percent from last season.

U.S. barley production is forecast at 406 million bushels as of July 1, 1994. This production, if realized, would be 1 percent above the 1993 production of 400 million bushels. Yields are expected to average 59.3 bushels per acre, up 0.4 bushel from last year. Area harvested and to be harvested, at 6.85 million acres, is up 1 percent from last year's 6.79 million acres.

U.S. oat production is forecast at 248 million bushels, up 20 percent from last year. The forecasted yield, at 60.1 bushels per acre, is up 5.7 bushels from last season's 54.4 bushels. Area harvested and to be harvested, at 4.13 million acres, is up 9 percent from the 1993 harvested acreage of 3.79 million acres.

JULY 1 PASTURE & RANGE FEED CONDITION

Montana's pasture and range feed condition was rated at 92 percent of normal on July 1, 1994. This is an 8 point increase over a year ago, but a 1 point decrease from last month. Pastures and ranges have been able to maintain the good condition across most of the state. The southern tier of the state had the largest decrease from a month ago with the south central district dropping 14 points. The central district rating remains unchanged from a month ago, while the northern tier's rating stayed within 4 points of last month.

CHERRY PRODUCTION FORECAST

Montana's 1994 cherry crop is forecast at 750 tons, 150 tons less than last year's total production. There were reports of frost early in the season that hurt some orchards. The cool weather during pollination limited bee activity in some areas. Harvest is expected to be earlier because of the early growing season. Cherry growers are hoping for good picking weather to avoid the same situation as last year when most of the crop was lost due to rain during harvest.

U.S. sweet cherry production is forecast at 168,200 tons, down fractionally from last year and 18 percent less than 1992.

PRICES RECEIVED

Montana crop prices for the full month of May were lower, compared with the previous month, except for durum wheat, barley, and oats. Winter wheat decreased 10 cents to $3.25, and other spring wheat went down 21 cents to $3.48 per bushel. Durum wheat rose 27 cents to $6.30 per bushel.

All barley, at $2.15, was 20 cents higher than the April price. At $1.46, oats averaged 9 cents above the previous month. Alfalfa hay decreased $1.00 to $65.00 per ton, and other hay dropped $1.00 to $54.00 per ton. The all wheat price for mid-month June averaged $3.20 per bushel while the all barley price was $2.00.

Livestock producers experienced lower prices for the full month of May, with the exception of sheep increasing $2.70 to $29.80 per cwt. Prices received for lambs averaged $2.00 below last month at $47.30. Cow prices were down $2.20 to $46.40 per cwt, and the average price for steers and heifers decreased $8.00 to $73.40 per cwt. Calf prices fell $7.80 to $89.30 per cwt. Milk prices increased 5 cents to $13.90 per cwt. Steer and heifer prices for mid-month June averaged $72.00 per cwt.

U.S. steer and heifer prices averaged $69.70 during May, down $5.70 from April. Hogs sold in May averaged $42.60, down 10 cents from last month. Egg producers received 58.2 cents per dozen compared with 61.7 cents in April. U.S. winter wheat producers averaged $3.18 per bushel, down from April's average of $3.25. The May average price for spring wheat was $3.63, 5 cents less than April and durum was $4.93, significantly below the $5.70 received in April. The May U.S. barley price was $2.11, 8 cents above last month.

MONTANA CROP HEALTH HOTLINE

Montana State University's Extension Service has a new toll-free hotline--all that is needed is a touch-tone telephone. It is like a state-wide radio program where the listener can tune in at their convenience and hear the "Pest Control Program" of their choice, commercial free. The Hotline program format includes a variety of topics such as Crop and Urban Plant Diseases, Insect and Weed Pests, and current Ripe Issues.

The concise verbal bulletins are recorded by MSU Crop Pest Specialists and are available 24 hours a day. During MSU office hours (8-12 and 1-5, Monday through Friday) the caller is never more than two, single-digit numbers away from speaking with staff at the Plant Disease Clinic, the Insect Diagnostics Lab, or the Weed ID Lab. The reports include the specialist's name, how you can get a printed copy of the report, and the date the message will be changed.

We recommend that the caller listen to the whole welcome message on their first call because it contains instructions that will make the system easier to use. To place a call dial 1-800-537-7281 or, in Bozeman, dial 994-3453. When calling the Hotline, use the following menu to reach the information or specialist of your choice or call your local county extension agent listed in the phone book.

JUNE ACREAGE REPORT

Montana farmers plan to harvest 5.33 million acres of wheat, 2 percent more than last year. Winter wheat acres for harvest as grain are expected to be 1.85 million acres, down 24 percent from last year when a lot of the winter wheat couldn't get planted. Farmers planted 3.4 million acres of spring wheat, up 24 percent from a year ago and the most acreage since 1989. Spring wheat for harvest is estimated at 3.3 million acres, up 25 percent from a year ago. Durum wheat planted acreage came in at 180,000 acres up 57 percent from 1993 and farmers plan to harvest 178,000 acres, also up 56 percent from a year ago.

Barley planted acreage is estimated at 1.3 million acres, unchanged from a year ago. Barley harvested acreage is expected to be 1.15 million acres, up 5 percent from a year ago. Farmers planted 140,000 acres of oats, the same as last year, and plan to harvest 80,000 acres for grain, 10,000 acres more than last year. Farmers and ranchers intend to harvest 1.55 million acres of alfalfa, up 3 percent from 1993. All other hay acreage is set at 750,000 acres, down 14 percent from 1993. Corn acreage planted for all purposes, at 70,000 acres, is up 5,000 acres from last year. Sugar beets were planted on 54,400 acres, unchanged from the previous year, while dry beans were planted on 8,500 acres, 29 percent less than a year ago.

The **United States** winter wheat growers planted an estimated 49.5 million acres, down 4 percent from 1993 and 3 percent less than previously published. Grain area is estimated at 41.5 million acres, down 2 percent from the June 1 forecast and off 5 percent from 1993. Spring wheat plantings total 18.2 million acres, down slightly from 1993. Growers intend to harvest 17.8 million acres for grain, up 6 percent from last year's flood and disease reduced level. Durum wheat planted for 1994 is estimated at 2.7 million acres; 2.64 million acres are expected to be harvested for grain. The planted level is up 23 percent from 1993 and the grain area is up 29 percent.

Barley seedings last fall and this spring totaled 7.31 million acres, down 7 percent from last year. The area to be harvested for grain is expected to total 6.85 million acres, up 1 percent from last year. Oats planted last fall and this spring totaled 6.70 million acres, down 16 percent from 1993. Growers intend to harvest 4.13 million acres for grain in 1994.

Corn planted for all purposes is estimated at 78.8 million acres, up 7 percent from last year. Growers expect to harvest 71.8 million acres for grain, up 14 percent from 1993. Hay growers expect to harvest 60.3 million acres of hay in 1994. The area harvested of alfalfa and alfalfa mixtures cut for hay is estimated at 24.7 million acres, virtually unchanged from 1993. Acreage of all other hay harvested is estimated at 35.6 million acres.

The Montana crop acreage and grain stocks estimates in this issue of the Reporter are the result of surveying approximately 3,000 Montana farmers and ranchers during June. Names were selected on a statistical probability basis. SPECIAL THANKS to those operators that were interviewed and responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

CATTLE ON FEED DOWN 1 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 8.23 million head, down 1 percent from a year ago but up 5 percent from June 1, 1992. Placements in feedlots during May totaled 1.41 million, 22 percent below 1993 and 19 percent below 1992. This is the smallest number of cattle placed during May since 1976. Net placements of 1.31 million for May were down 21 percent from last year and 18 percent below 1992. Marketings during May totaled 1.68 million, up 1 percent from a year ago and 5 percent above 1992. Other disappearance during May was 92,000 head, 30 percent below last year and 25 percent below 1992.

[1] Preliminary. [2] Planted for all purposes. [3] Production forecast available July 12, 1994. [4] Production forecast available August 11, 1994. [5] Production forecast available November 9, 1994.

RED MEAT PRODUCTION FOR MAY

Montana slaughter plants produced 1.64 million pounds, dressed weight, of red meat during May 1994. This was 5 percent above the previous month, and 33 percent higher than last year. The number of cattle slaughtered, at 1,900 head, rose 500 head and average live weight, at 1,246 pounds, decreased 30 pounds from last year.

A total of 2,300 hogs were slaughtered in May, 400 more than a year ago. Average live weight increased 19 pounds over last year to 250 pounds. The number of sheep and lambs slaughtered during the month increased to 200 head. The average live weight was 115 pounds, 2 pounds lighter than last May.

Commercial red meat production for the **United States** totaled 3.43 billion pounds during May, 1 percent above the record high set in May 1984. Beef production totaled 1.99 billion pounds, rising 7 percent from a year earlier. Head kill totaled 2.83 million, up 2 percent from last year. The average live weight increased 49 pounds to 1,172 pounds. Veal production totaled 22.0 million pounds, up 14 percent. Calf slaughter totaled 92,500 head, up 10 percent from last May and average live weight rose 9 pounds to 409.

Pork production, at 1.40 billion pounds, was up 7 percent from a year earlier. Hog kill totaled 7.56 million head, 6 percent above a year ago. The average live weight increased 1 pound to 255 pounds. Lamb and mutton production, at 28.0 million pounds, rose 4 percent. Slaughter totaled 434,500 head, up 6 percent from the previous year. The average live weight decreased 1 pound to 130 pounds. January-May red meat production was 16.9 billion pounds, up 4 percent from the comparable period a year earlier. Accumulated beef production increased 7 percent, veal was up 3 percent, pork rose slightly, and lamb and mutton was up 2 percent.

MAY EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 6.15 billion during May 1994, up 2 percent from the 6.01 billion produced a year ago. Production included 5.21 billion table eggs, 877 million broiler-type hatching eggs, and 62.0 million egg-type hatching eggs. The total number of layers during May 1994 averaged 287 million, up 2 percent from the 281 million a year ago. May egg production per 100 layers was 2,141 eggs, compared with 2,137 in May 1993.

All layers in the U.S. on June 1, 1994, totaled 286 million, compared with 281 million a year ago. The 286 million layers consisted of 236 million layers producing table or commercial type eggs, 47.8 million layers producing broiler-type hatching eggs, and 2.75 million layers producing egg-type hatching eggs. Rate of lay per day on June 1, 1994, averaged 69.2 eggs per 100 layers, up fractionally from last year's 69.1.

JUNE 1 GRAIN STOCKS

Montana wheat stocks on June 1, 1994 totaled 72.0 million bushels, up 49 percent from a year ago. This is the largest carryover since 1987, following the largest wheat crop ever produced in Montana, and is nearly equal the ten-year average.

Winter wheat stored, at 29.7 million bushels, were 62 percent above a year ago and all spring wheat, at 42.3 million, jumped 41 percent. Wheat stored on farms accounted for 76 percent of the total for all positions. Barley stocks on June 1 totaled 16.6 million bushels, up 7 percent from a year ago. Oats stocks, at 2.15 million bushels, rose 14 percent from last year.

U.S. old crop all wheat stocks on June 1, 1994, are estimated at 571 million bushels, up 8 percent from June 1, 1993. Old crop durum wheat stocks on June 1, 1994, are estimated at 29.2 million bushels, down 40 percent from last June. These are the lowest June 1 durum stocks since 1976. Barley stored in all positions on June 1, 1994, totaled 138 million bushels, 9 percent below the stocks of June 1, 1993. Oats stored in all positions on June 1, 1994, totaled 106 million bushels, 7 percent below the stocks of June 1, 1993. Corn stocks in all positions on June 1, 1994, totaled 2.36 billion bushels, 36 percent below a year earlier. Of the total stocks, 1.20 billion bushels are stored on farms, 46 percent less than last year. Off-farm stocks, at 1.16 billion bushels, are down 23 percent from last year.

MAY MILK PRODUCTION

Milk production in the 21 major States during May totaled 11.5 billion pounds, 1 percent more than production in these same States in May 1993. April revised production at 11.0 billion pounds was 1 percent above April 1993.

Production per cow in the 21 major States averaged 1,431 pounds for May, 29 pounds more than May 1993. The number of cows on farms in the 21 major States was 8.02 million head, 122,000 head less than May 1993 but 3,000 head more than April 1994.

During the January-March period, the 21 major States produced 31.5 billion pounds of milk, 83.8 percent of the U.S. production. If producers in the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 13.7 billion pounds for May 1994.

JUNE 1 HOG & PIG INVENTORY

U.S. inventory of all hogs and pigs on June 1, 1994, is estimated at 60.1 million head, which is a 3 percent increase from last year and 2 percent above June 1, 1992. Breeding inventory, at 7.54 million head, is 3 percent above last year and slightly above two years ago. Market hog inventory is 52.6 million head, which is 3 percent above a year ago and 2 percent above June 1, 1992.

The December 1993-May 1994 U.S. pig crop was 50.4 million head, 3 percent more than last year but slightly below the same period in 1992. Sows farrowing during the six-month period totaled 6.16 million, up 3 percent from last year but 2 percent below the same period in 1992. Pigs saved per litter were 8.18, a new record high for the period, and compares with 8.13 last year and 8.06 two years ago. The March-May U.S. pig crop was 27.2 million head, 4 percent above a year earlier.

U.S. hog producers intend to have 6.25 million sows farrow during the June-November period, 5 percent above the actual sows farrowed during the same period in 1993 and 4 percent above two years ago. Farrowings for both June-August and September-November are expected to be up 5 percent from last year.

Winter Wheat Production Forecast
Montana's Rank
Prices Received
Pasture & Range Feed Condition
Winter Wheat by District

Continued mild weather and mostly adequate rainfall have maintained the prospects for a good winter wheat crop. Yield prospects in the southern third of the state showed a slight increase from May while the central, north central, and northeast prospects declined slightly. Winter wheat condition as of June 5 was rated at 3% poor, 24% fair, 51% good and 22% excellent. Wheat streak mosaic has become a concern in some areas of the state, but the number of acres affected are unknown at this time.

WINTER WHEAT PRODUCTION FORECAST UNCHANGED FROM MAY

Montana's 1994 winter wheat crop is expected to be 77.9 million bushels, unchanged from the May 1 forecast, but is 76% of the 1993 level. As of June 1, harvested acres are estimated at 2.05 million acres and yield at 38 bushels per acre, both unchanged from May 1.

For the U.S., winter wheat production is forecast at 1.67 billion bushels, up 1 percent from the May 1 forecast, but down 5 percent from 1993. Area for grain harvest is unchanged from May 1 at 42.1 million acres. Yields are expected to average 39.7 bushels per acre, up 0.4 bushels from May 1, but down 0.6 bushels per acre from last year. Increases from last month in Soft Red Winter and White wheat offset a slight decline in Hard Red Winter.

MONTANA'S RANK HIGHLIGHTS

Record breaking winter & spring wheat yields moved Montana's rank up in 1993. Most other crop ranks also improved with the exception of durum, dry beans, and corn for grain which decreased and sugar beets and potatoes which remained unchanged.

The all cattle rank remained unchanged from January 1, 1993, with all cows dropping 1 spot but cattle on feed moving up 3 places. All other livestock rankings remained the same, except honey production which dropped one.

Total cash receipts remained unchanged, but both crops and livestock cash receipts dropped one position.

PRICES RECEIVED

Montana crop prices for the full month of April were a mixed bag in comparison with the previous month. Winter wheat decreased 17 cents to $3.35, and other spring wheat went down 5 cents to $3.69 per bushel. Durum wheat rose 51 cents to $6.03 per bushel. All barley, at $1.95, was 23 cents lower than the March price. At $1.37, oats remained unchanged from the previous month. Alfalfa hay also remained unchanged, at $66.00 per ton, along with other hay at $55.00 per ton. The all wheat price for mid-month May averaged $3.66 per bushel while the all barley price was $1.97.

Livestock producers experienced lower prices for the full month of April, with the exception of cows rising 50 cents to $48.60 per cwt. Prices received for sheep averaged $8.40 below last month at $27.10. The average price for steers and heifers decreased $3.10 to $81.40 per cwt. Calf prices fell $2.30 to $97.10 per cwt. Milk prices decreased 25 cents to $13.85 per cwt. Steer and heifer prices for mid-month May averaged $73.50 per cwt.

Nationally, steer and heifer prices averaged $75.40, unchanged from March. Hogs sold in April averaged $42.70, down $1.70 from last month. Egg producers received 61.7 cents per dozen compared with 65.9 cents last month. U.S. winter wheat producers averaged $3.25 per bushel, 1 cent less than March prices. The average spring wheat price was $3.68, 4 cents more than March, and the barley price was $2.03, up 2 cents.

The All Farm Products Index of Prices Received in May was 144 based on 1977=100, down 2 points (1.4 percent) from April 1994. Price declines from April for cattle, milk, eggs, and corn more than offset price gains for tomatoes, broilers, celery, and peaches.

JUNE 1 PASTURE & RANGE FEED CONDITION

Montana's pasture and range condition was rated at 96 percent of normal on June 1, 1994. This is a 17 point increase over a year ago and a 1 point increase over last month. Timely rain showers and mild weather across the state have maintained the good rating. Only the Southwest district showed a decrease in condition compared to a year ago, while the Northeast portion of the state showed the biggest gain with a 31 point increase.

APRIL MILK PRODUCTION

Milk production in the 21 major States during April totaled 11.0 billion pounds, 1 percent more than production in these same States in April 1993. March revised production, at 11.1 billion pounds, was slightly above March 1993.

Production per cow in the 21 major States averaged 1,372 pounds for April, 31 pounds more than April 1993. The number of cows on farms in the 21 major States was 8.01 million head, 138,000 head less than April 1993 but 5,000 head more than March 1994.

During the January-March period, the 21 major States produced 31.5 billion pounds of milk, 83.8 percent of the U.S. production. If producers in the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 13.1 billion pounds for April 1994.

CATTLE ON FEED UP 3 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 8.59 million head, up 3 percent from a year ago and up 10 percent from May 1, 1992. This is the largest May inventory for the 7 States since 1973.

Placements in feedlots during April totaled 1.41 million, 7 percent above 1993 but 1 percent below 1992. Net placements of 1.32 million for April were up 11 percent from last year and 2 percent above 1992.

Marketings during April totaled 1.60 million, up 2 percent from a year ago and 7 percent above 1992.

Other disappearance during April was 82,000 head, 35 percent below last year and 34 percent below 1992.

Cattle and calves on feed May 1, 1994, for the 7 States in the feedlots with 1,000 or more head capacity totaled 7.62 million head, 7 percent above May 1, 1993, and 13 percent above May 1, 1992. The inventory in the 1,000+ capacity feedlots accounted for 88.7 percent of the total inventory.

FARM WAGE RATES FOR APRIL

There were 2.92 million people working on the Nation's farms and ranches during the week of April 10-16, 1994. This compares with 2.88 million people during the April 1993 survey week. Self-employed farm operators accounted for 1.42 million of the total, along with 456,000 unpaid workers, and 803,000 workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 240,000 workers.

Farm operators paid their hired workers an average wage of $6.42 per hour during the April 1994 survey week. This rate was up 5 cents from a year earlier. Workers paid on an hourly basis earned $6.11 per hour compared with $6.10 in April 1993.

Field workers received an average of $6.02 per hour, down 2 cents from the April 1993 survey week. Livestock workers earned $5.80 per hour compared with $5.65 a year earlier. Benefits, such as housing and meals, were provided to 42 percent of the hired workers during the survey week, compared to 44 percent in April 1993.

Farm operators in the Mountain I region, which includes Montana, Idaho, and Wyoming, paid their hired workers an average wage of $5.63 per hour during the April 1994 survey week, down 13 cents from a year ago. Field workers received $5.70, up 3 cents from last year, while livestock workers earned $5.29, down 14 cents from wages in 1993.

APRIL EGG PRODUCTION UP 3 PERCENT

U.S. egg production totaled 6.03 billion during April 1994, up 3 percent from the 5.86 billion produced a year ago. Production included 5.14 billion table eggs, 836 million broiler-type hatching eggs, and 59.0 million egg-type hatching eggs. The total number of layers during April 1994 averaged 289 million, up 2 percent from the 282 million a year ago. April egg production per 100 layers was 2,090 eggs, compared with 2,078 in April 1993.

All layers in the U.S. on May 1, 1994 totaled 288 million, compared with 281 million a year ago. The 288 million layers consisted of 237 million layers producing table or commercial type eggs, 47.9 million layers producing broiler-type hatching eggs, and 2.73 million layers producing egg-type hatching eggs. Rate of lay per day on May 1, 1994, averaged 68.9 eggs per 100 layers, the same as last year.

1993 MILK PRODUCTION, DISPOSITION AND INCOME

Montana milk production decreased 9 percent in 1993 to 307 million pounds. An average of 22,000 milk cows were on farms during the year, down 1,000 head from 1992. The rate per cow, at 13,955 pounds, was 262 pounds below 1992.

Cash receipts from marketings of milk during the year in Montana, at 40 million dollars, was 5 percent below 1992. Producer returns averaged $13.40 per cwt, the same as 1992. Marketings totaled 292 million pounds, down 6 percent from 1992. A total of 15 million pounds of milk was used on farms, 8 million pounds were fed to calves, and 7 million were consumed as milk, cream, and butter.

U. S. milk production decreased slightly in 1993 to 151 billion pounds. The rate per cow, at 15,554 pounds, was 135 pounds above 1992. The annual average number of cows on farms, at 9.71 million head, was 130,000 less than the 1992 average.

Cash receipts from marketings of milk during 1993, at $19.3 billion dollars, was 3 percent below 1992. Producer returns averaged $12.96 per cwt, $0.29 below the 1992 average. Marketings totaled 149 billion pounds, slightly below 1992. Marketings include whole milk and producer separated cream sold to plants and dealers as well as milk sold directly to consumers. An estimated 1.90 billion pounds of milk were used on farms where produced, 2 percent below 1992. Calves were fed 76 percent of this milk with the remainder consumed in producer households as milk, cream, and butter.

POTATO STOCKS

Montana producers stored 160,000 cwt of potatoes as of May 1, 1994, compared with 270,000 a year ago. The May 1, 1994 stocks represent 6 percent of production from the 1993 crop year, compared with 11 percent of production in 1993 for the 1992 crop year.

Western potato stocks totaled 55.3 million cwt in six States, down 6 percent from last year, but 2 percent above two years ago. Stocks in Idaho fell well below a year ago, while potatoes in Washington and Oregon are plentiful. Idaho's stocks were down 17 percent and accounted for 53 percent of the Western holdings. Washington's stocks of 11.5 million cwt, were up 11 percent and Oregon's stocks were up 56 percent from last year. California was down 17 percent from a year ago, Colorado slipped 12 percent, and Montana fell 41 percent.

U.S. potato stocks totaled 68.1 million cwt on May 1, 1994, down 9 percent from last year and 2 percent below two years ago. Stocks made up 19 percent of fall potato production in the 15 storage States, compared with 20 percent a year ago. Season-to-date disappearance and processing were both record highs. Disappearance from the start of harvest through April totaled a record high 298 million cwt of potatoes, up 2 percent from last year and 1 percent above two years ago.

Shrinkage and loss was estimated at 28.8 million cwt, 9 percent below the 31.7 million cwt lost last year, but 2 percent above two years ago when losses were 28.2 million cwt. Processing in the eight major States claimed a record high 140 million cwt of potatoes from the 1993 crop and continues at a furious pace. This is up 8 percent from last year and 6 percent above two years ago. April processor usage was 17.2 million cwt, up 17 percent from a year ago and 12 percent above two years ago.

RED MEAT PRODUCTION FOR APRIL

Montana slaughter plants produced 1.56 million pounds, dressed weight, of red meat during April 1994. This was a 1 percent decrease from the previous month, but a 28 percent increase from a year ago.

The number of cattle slaughtered, at 1,900 head, rose 500 head from last year. The average live weight, at 1,252 pounds, increased 53 pounds from last year.

A total of 1,900 hogs were slaughtered in April, 200 less than a year ago. Average live weight increased 11 pounds to 243. There were 200 head of sheep and lambs slaughtered, 100 head more than a year ago. The average live weight was 102 pounds.

Commercial red meat production for the **United States** totaled 3.38 billion pounds during April. This production was 3 percent above a year earlier.

Beef production totaled 1.90 billion pounds, up 7 percent from a year earlier. Head kill totaled 2.71 million, up 1 percent from a year ago. The average live weight increased 50 pounds to 1,175 pounds. Veal production totaled 22.0 million pounds, down 1 percent from a year earlier. Calf slaughter totaled 94,300 head, down 4 percent from last year. The average live weight rose 6 pounds to 392 pounds.

Pork production, at 1.43 billion pounds, was down 2 percent from a year earlier. Hog kill totaled 7.78 million head, 3 percent below last year. The average live weight increased 1 pound to 255 pounds. Lamb and mutton production, at 27.0 million pounds, decreased 12 percent from a year ago. Slaughter totaled 419,400 head, down 13 percent from a year earlier. The average live weight increased 3 pounds to 129 pounds.

January-April red meat production was 13.5 billion pounds, up 3 percent from the comparable period a year ago. Accumulated beef production was up 7 percent, veal was up 1 percent, pork was down 1 percent, and lamb and mutton was up 1 percent.

featuring...MUSSELSHELL COUNTY

Musselshell County received its name from the Musselshell River that traverses it from east to west. The county is located just south of the geographic center of Montana. It was created in March of 1911 and has an approximate land area of 1,197,184 acres. The Bull Mountain Range comprises most of the southern portion of the county.

In the agricultural business, Musselshell County ranked 29th in winter wheat production and 39th for all hay production in 1992. Other major crops grown in the county include barley and oats. Musselshell County ranked 7th in the state for sheep and lambs inventory and 34th for cattle inventory in 1993.

Livestock cash receipts brought $10,843,000 and a ranking of 37 in the state in 1991, crops brought in $4,618,000 for a ranking of 35th, and government payments brought in $2,392,000 for total cash receipts of $17,853,000 and a rank of 40th in 1991. Musselshell County claims Roundup, Montana as its county seat. This area has an annual average precipitation of 12.01 inches and an average of 129 frost-free days per year.

WINTER WHEAT PRODUCTION AND HAY STOCKS

Montana 1994 winter wheat production is forecast at 77.9 million bushels, 24 percent below last year's crop. Acres expected to be harvested, at 2.05 million, are 16 percent below the previous year. Yield per acre, based on May 1 conditions, is forecast at 38 bushels per acre, 4 bushels below last year. Last year's wet fall and delayed harvesting hampered winter wheat planting efforts. The generally mild winter caused limited winter kill to this year's wheat crop. Some much needed moisture came in April setting the stage for a yield that is 2 bushels above the 5-year average.

For the US, winter wheat is forecast at 1.66 billion bushels, down 6 percent from 1993. Yield estimates average 39.3 bushels per acre compared to 40.3 bushels per acre last year. Producers intend to harvest 42.1 million acres, down 4 percent from 1993.

Hay stocks on Montana farms and ranches May 1, 1994 were 1,255,000 tons, up 40 percent from last year's May 1 stocks. Farmers and ranchers had only 24 percent of their 1993 production on hand May 1, 1994. Disappearance in the December 1, 1993-May 1, 1994 period amounted to nearly 3.5 million tons, 11 percent more than last season.

Nationally, hay stocks totaled 22.7 million tons on May 1, 1994, 8 percent more than May 1 last year. Disappearance of hay in the December 1, 1993-May 1, 1994 period totaled 79.2 million tons. This compares with 84.5 million tons in the same period a year ago.

MAY 1 PASTURE AND RANGE FEED CONDITION

Montana pasture and range feed conditions were rated 95 percent of normal on May 1, 1994, 11 points above last year at this same time. Good spring precipitation, when added to last season's very favorable conditions, gave pastures and ranges an excellent start in developing ample grazing. All districts, except the North Central and South Central with a 3- and 5-point decline, respectively, showed improvement over a year ago with the Southwest district showing the biggest gain of 25 points.

1993 DAIRY PRODUCTS

Production of butter in the United States during 1993 totaled 1.32 billion pounds, 4 percent less than 1992. California and Wisconsin, the leading states, each accounted for 25 percent of production, followed by Washington with 9 percent.

Total cheese production, excluding cottage cheese, was 6.53 billion pounds, 1 percent above the 1992 production. Wisconsin was the leading state with 31 percent of the production. American-type cheese production, at 2.96 billion pounds, was 1 percent above 1992 and accounted for 45 percent of total cheese in 1993.

Italian varieties, with 2.49 billion pounds produced, were 1 percent below the 1992 production. Mozzarella accounted for 78 percent of the Italian production followed by Ricotta with 9 percent and Provolone with 7 percent. Wisconsin was the leading state in Italian cheese production with 32 percent of the production.

Creamed cottage cheese, at 432 million pounds, was down 6 percent from 1992, while lowfat cottage cheese, at 318 million pounds, was down 4 percent.

Frozen dairy products showed mixed changes in 1993. Ice cream production totaled 866 million gallons, up slightly from 1992. Ice milk, at 325 million gallons, was down 1 percent. Milk sherbet, at 50.8 million gallons, was up 2 percent. Frozen yogurt production, at 150 million gallons, was up 12 percent. The 260 million gallons of soft products (ice cream, ice milk, and sherbet) made during 1993 accounted for 21 percent of the total frozen dairy products, excluding yogurt. Soft frozen dairy products are sold from direct-serve soft freezer and milk shake machines.

Nonfat dry milk for human food production, at 948 million pounds, was up 9 percent from 1992. Dry buttermilk production, at 51.0 million pounds, was down 17 percent.

CATTLE HERD CONTINUES SLOW EXPANSION

The nation's cattle herd continues to increase at a slow pace. This slow expansion partly reflects structural changes within the industry that allow producers to market more beef per cow in a shorter period of time. Returns to cow-calf producers have been above cash expenses since 1986, but not strong enough to stimulate a more rapid expansion of the breeding herd. A slow expansion will limit future increases in per capita beef supplies and help maintain relatively stable beef prices.

Returns to cow-calf producers are forecast to remain positive in 1994, but will decline as input costs continue to rise and feeder cattle prices decline. Beef production in 1994 is expected to be the largest since 1986, but up just 2 pounds on a per capita basis from the cyclical low in 1993.

- Cattle inventory on January 1 totaled 101.7 million head, up 1 percent from a year earlier.
- Feedlot inventories on March 1 were 2 percent above a year earlier and the largest for this date since 1974.
- Fed cattle prices will rise from the low $70's per cwt this winter, to the mid-$70's for the remainder of 1994.
- Retail Choice beef prices are expected to average in the mid- to upper $2.80's per pound during 1994, down from $2.93 last year.

POULTRY PRODUCTION AND VALUE

Montana egg sales brought a slightly higher value to producers in 1993 compared with 1992. Although eggs produced decreased by 22 percent, there was a 29 percent increase in the average price received per dozen eggs. At 63 cents, Montana's average price for a dozen eggs in 1993 is slightly under the U.S. average price. Montana's egg production, at 125 million eggs, is the lowest on record. These 2 factors combined to produce a value of production of $6.6 million, only slightly higher than the record low of $6.5 million last year.

Montana's value of sales from chickens excluding broilers in 1993 increased by 1.5 cents per pound and pounds sold rose 29 percent. This resulted in the value of chicken sales more than double that of the previous year.
(continued on back page)

PRICES RECEIVED

Montana crop prices for the full month of March were higher, compared with the previous month, except for hay. Winter wheat increased 16 cents to $3.52, and other spring wheat went up 12 cents to $3.74 per bushel. Durum wheat rose 72 cents to $5.52 per bushel. All barley, at $2.18, was 17 cents higher than the February price. At $1.37, oats averaged 11 cents above the previous month. Alfalfa hay decreased $2.00 to $66.00 per ton, and other hay dropped $3.00 to $55.00 per ton. The all wheat price for mid-month April averaged $3.62 per bushel, while the all barley price was $1.95.

Livestock producers experienced higher prices for the full month of March, with the exception of lambs dropping $4.50 to $56.90 per cwt. Prices received for sheep averaged $3.10 above last month at $35.50. Cow prices were up 90 cents to $48.10 per cwt, and the average price for steers and heifers increased 80 cents to $84.50 per cwt. Calf prices rose $1.70 to $99.40 per cwt. Milk prices decreased 20 cents to $14.10 per cwt. Steer and heifer prices for mid-month April averaged $82.50 per cwt.

Nationally, steer and heifer prices averaged $75.40, up $2.10 from February. Hogs sold in March averaged $44.40, down $3.50 from last month. Egg producers received 65.9 cents per dozen compared with 63.7 cents last month. U.S. winter wheat producers averaged $3.26 per bushel, 8 cents less than February's price. The average spring wheat price was $3.64, 4 cents less, and the barley price was $2.01, down 7 cents.

The All Farm Products Index of Prices Received for the U.S. in April was 146 based on 1977=100, 2 points below March 1994. Price declines from March for wheat, hogs, corn, and soybeans more than offset price gains for hay, cattle, potatoes, and oranges.

POULTRY PRODUCTION AND VALUE (continued)

The combined value of U.S. production from broilers, eggs, and turkeys and the value of sales from chickens in 1993, was $16.8 billion, up 12 percent from the $15.0 billion in 1992. Of the combined total, 62 percent was from broilers, 22 percent from eggs, 15 percent from turkeys, and about 1 percent from other chickens.

The value of broilers produced during 1993 was $10.4 billion, up 13 percent from the $9.17 billion in 1992. The total number of broilers produced in 1993 was 6.69 billion, up 4 percent from 1992. The 1993 average price per pound on a liveweight equivalent basis was 34.0 cents per pound, compared to 31.8 cents per pound in 1992.

Value of egg production in 1993 was $3.77 billion, up 11 percent from the $3.39 billion in 1992. Egg production totaled 71.4 billion eggs, up 1 percent from the 70.5 billion eggs produced in 1992. In 1993, eggs averaged 63.4 cents per dozen, compared with 57.6 cents in 1992.

The value of turkeys produced during 1993 was $2.50 billion, up 5 percent from the $2.39 billion the previous year. Turkey production in 1993 totaled 6.42 billion pounds liveweight, compared with 6.33 billion pounds in 1992. The average price received by producers during 1993 was 39.0 cents per pound, compared with 37.7 cents in 1992.

1993 BARLEY COUNTY ESTIMATES

The 1993 barley county estimates are available for distribution. We're publishing the all and irrigated barley county estimates in this publication, but estimates by class and cropping practice are available from this office upon request by calling 1-800-835-2612.

These estimates are the only county figures published for Montana. They are based on acreage and production surveys conducted last fall. Nearly 5,300 questionnaires were tabulated. The majority were completed by telephone to ensure better coverage in each county. Thanks to those who provided information!

1993 MEAT ANIMAL PRODUCTION, DISPOSITION, AND INCOME

Cash receipts from the marketings of cattle, sheep, and hogs in Montana totaled $874 million, up 6 percent from 1992. **Cattle and calf** cash receipts, at $804 million, rose 6 percent from 1992. Cattle marketings totaled 1.2 million head, down slightly from 1992. Calf marketings amounted to 220,000 head, down from 290,000 head. The average price received for cattle rose to $75.60 per cwt from $66.50 and calf prices rose to $97.00 per cwt from $90.30 in 1992.

Sheep and lamb cash receipts dropped 4 percent from 1992 to $24 million with 86,000 sheep and 350,000 lambs being marketed in 1993. Average prices received for sheep rose $3.20 per cwt to $26.50 and lambs jumped $9.70 per cwt to $65.20. Cash receipts from **hogs** jumped 15 percent from 1992 to $46 million. Hog marketings, at 379,000 head, were down fractionally, while average prices increased $6.50 per cwt to $44.10.

Total **United States** cash receipts for all meat animals was $51.4 billion with cattle and calves accounting for 78 percent of the total, hogs and pigs 21 percent, and sheep and lambs 1 percent. Meat animal production in 1993 totaled 65.6 billion pounds, up fractionally from 1992. The value of production rose 6 percent for all meat animals with sheep and lambs the only species showing a decrease.

QUARTERLY CATTLE ON FEED UP 2 PERCENT

Cattle and calves on feed for slaughter market in the 13 States preparing quarterly estimates totaled 10.6 million head, up 2 percent from a year ago and up 10 percent from April 1, 1992. The inventory included 7.12 million steers and steer calves, up 4 percent from a year ago and 13 percent above two years ago. This group accounts for 67.0 percent of the total inventory. Heifers and heifer calves accounted for 3.46 million head, 2 percent below a year ago.

Placements of cattle and calves on feed in the 13 States during the January-March 1994 quarter totaled 5.34 million, fractionally above last year, but 1 percent below January-March 1992. **Net placements** of 5.06 million for January-March were 4 percent above last year and 1 percent above January-March 1992. **Marketings** of fed cattle during the January-March 1994 quarter totaled 5.54 million, up 4 percent from the same quarter last year and 2 percent above two years ago. **Other disappearance** totaled 275,000 head compared to 439,000 in January-March 1993 and 404,000 in January-March 1992.

CATTLE ON FEED, PLACEMENTS, MARKETINGS
BY QUARTERS FOR 13 STATES

MARCH RED MEAT PRODUCTION SETS RECORD HIGH

Montana slaughter plants produced 1.57 million pounds, dressed weight, of red meat during March 1994. This was a 27 percent increase from the previous month, and a 15 percent increase from a year ago. The number of cattle slaughtered, at 1,900 head, rose 400 head from last year. The average live weight, at 1,186 pounds, decreased 7 pounds from last year.

A total of 2,300 hogs were slaughtered in March, 100 less than a year ago. Average live weight increased 9 pounds to 243. Sheep and lamb slaughter, at 200 head, was the same as last year. Average live weight, at 114 pounds, decreased 17 pounds.

Commercial red meat production for the **United States** totaled 3.59 billion pounds during March. This production was 1 percent above the record high set in March 1977 and 6 percent above a year earlier.

Beef production totaled 2.00 billion pounds, up 8 percent from a year earlier. Head kill totaled 2.86 million, up 3 percent from a year earlier. The average live weight increased 40 pounds to 1,181 pounds. Veal production totaled 26.0 million pounds. This production was unchanged from a year earlier. Calf slaughter totaled 114,000 head, down 4 percent from a year earlier. The average live weight was up 11 pounds to 384 pounds.

Pork production, at 1.53 billion pounds, rose 3 percent from a year earlier. Hog kill totaled 8.33 million head, 2 percent above a year earlier. The average live weight increased 1 pound to 253 pounds. Lamb and mutton production, at 34.0 million pounds, jumped 9 percent from a year earlier. Slaughter totaled 529,700 head, up 8 percent from a year earlier. The average live weight increased 2 pounds to 131 pounds.

MILK PRODUCTION

Montana's dairy farms produced 72 million pounds of milk during the January-March period, down 4 percent from the previous year. The number of milk cows on Montana farms totaled 21,000 head, down 1,000 head from 1993. The amount of grain and concentrates fed to milk cows amounted to 16.5 pounds per cow, the same as last year, with the value of those grains and concentrates rising 45 cents from last year to $7.55 per hundredweight.

Milk production in the 21 major States during March totaled 11.0 billion pounds, 1 percent less than production in these same States in March 1993. February revised production at 9.80 billion pounds was 1 percent below February 1993. Production per cow in the 21 major States averaged 1,374 pounds for March, 21 pounds more than March 1993. The number of cows on farms in the 21 major States was 8.00 million head, 175,000 head less than March 1993 and 20,000 less than February 1994.

The quarterly production of milk for the U.S. was 37.5 billion pounds, slightly below the January-March period last year. The average number of milk cows in the U.S. during the January-March quarter was 9.61 million head, 168,000 less than the same period last year.

Grain and other concentrates fed to milk cows on April 1, 1994, averaged 19.0 pounds per cow, 0.8 of a pound more than on April 1, 1993. The value of grain and other concentrates fed to cows on April 1, averaged $8.23 per hundredweight, $0.62 more than the price on April 1, 1993.

MARCH EGG PRODUCTION UP 3 PERCENT

U.S. egg production totaled 6.28 billion during March 1994, up 3 percent from the 6.07 billion produced a year ago. Production included 5.36 billion table eggs, 853 million broiler-type hatching eggs, and 62.0 million egg-type hatching eggs. The total number of layers during March 1994 averaged 289 million, up 2 percent from the 282 million a year ago. March egg production per 100 layers was 2,170 eggs, compared with 2,149 in March 1993.

All layers in the U.S. on April 1, 1994 totaled 290 million, compared with 282 million a year ago. The 290 million layers consisted of 239 million layers producing table or commercial type eggs, 47.4 million layers producing broiler-type hatching eggs and 2.80 million layers producing egg-type hatching eggs. Rate of lay per day on April 1, 1994, averaged 70.5 eggs per 100 layers, up 1 percent from last year's 69.7 eggs per 100 layers.

APRIL 1 POTATO STOCKS

Montana 's April 1, 1994 potato stocks totaled 1.77 million cwt, down 2 percent from a year earlier. The percentage of 1993's total potato production that was still being stored on April 1 was 66 percent compared to 73 percent last year.

Potato stocks in the United States totaled 108 million cwt on April 1, 1994, down 6 percent from last year and slightly below two years ago. Stocks made up 30 percent of fall potato production in the 15 storage States, compared with 31 percent a year ago. Season-to-date disappearance totaled 258 million cwt, 2 percent more than last year. Processor usage of 123 million cwt was up 6 percent from last year. Shrinkage and loss to date was 26.9 million cwt, 7 percent below last year. Processing in the eight major States claimed a record high 123 million cwt of potatoes from the 1993 crop so far, up 6 percent from last year and 5 percent above two years ago. March processor usage was 17.0 million cwt, up 13 percent from the 15.1 million cwt a year ago and 7 percent above two years ago.

Western potato stocks totaled 86.0 million cwt in six States, down slightly from last year, but 5 percent above two years ago. Idaho's stocks were down 9 percent and accounted for 54 percent of the Western holdings. Washington's stocks of 17.5 million cwt, were up 16 percent and Oregon's stocks jumped 47 percent from last year. California was down 16 percent from a year ago and Colorado was down 11 percent.

MONTANA 1993 SHEEP & LAMB LOSS

Montana sheep producers lost 108,000 sheep and lambs to all causes during 1993, representing a total value of $5.1 million. Total head lost declined 4 percent from 1992, but the value of those losses increased more than $. million.

Predators caused $1.8 million in losses, while non-predator factors accounted for $2.9 million and unknown causes claimed $.4 million. Coyotes remained the single largest cause of death, resulting in a $1.4 million loss. Coyotes accounted for 27 percent of the total value of death losses in the state. Non-predator losses accounted for 55 percent of all losses, down 1 point from the previous year.

Lambs losses by all predators amounted to 32,200 head, down 2 percent from last year. Lambs lost to weather, disease and other non-predator causes in 1993 totaled 36,100 head, down 11 percent from the previous year. Much of the decrease in predator and non-predator lamb losses was due to a 7 percent drop, 36,000 head, in lamb crop between 1992 and 1993.

Sheep killed by predators decreased 4 percent to total 8,000 head. Sheep losses to non-predator factors totaled 23,300, a 4 percent increase from 1992. A drop in sheep inventory, of 3 percent during 1993, was an important factor in the decreased predator losses. Lambs lost to unknown causes were up 34 percent to 4,700. Unknown causes claimed 3,700 head of sheep, down 14 percent from last year.

MONTANA STATE LIBRARY
1515 E. 6th AVE.
HELENA, MONTANA 59620

Planting intentions and grain stocks estimates in this issue are the result of surveying approximately 2,000 Montana farmers and ranchers during March. Names were selected on a statistical probability basis.

SPECIAL THANKS to those operators who responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

1994 PLANTING INTENTIONS

Montana farmers intend to plant 7.3 million acres in 1994, about 0.2 million more acres than last year. Farmers were surveyed on March 1 for their planting intentions. Their plans are preliminary, depending on changes in weather, market conditions, etc.

The state's all wheat acreage is expected to be 5.65 million acres, up 2 percent from last year. Winter wheat seeded last fall is 2.2 million acres, a decrease of 17 percent from a year ago. Hard spring wheat, at 3.2 million acres, is expected to be up 16 percent. Durum is up 117 percent with 250,000 acres expected to be planted. The steady increase in the price of durum wheat since late last year has contributed to an increase in acres expected to be planted.

Barley planted acreage is expected to be up 8 percent, at 1.4 million acres. Oats planting intentions are up 7 percent from a year ago at 150,000 acres, and they expect to harvest 80,000 acres compared with 70,000 acres in 1993. Sugar beet intended plantings, at 54,000 acres, are down 1 percent; dry beans, at 9,000 acres, are down 25 percent, and corn, at 60,000 acres, is down 8 percent. Farmers expect to harvest 2.4 million acres of all hay which reflects a 1 percent increase.

In the **United States** all wheat planted for 1994 is expected to total 71.5 million acres, down 1 percent from 1993. Winter wheat planted for 1994 is 50.8 million acres, up slightly from the total published in January but down 2 percent from 1993. Durum wheat seeded for 1994 is expected to total 2.59 million acres, up 18 percent from last year. Other spring wheat producers intend to seed 18.1 million acres of spring wheat other than durum this year, down 1 percent from 1993.

Barley growers intend to seed 7.56 million acres to barley for 1994, down 3 percent from the 7.83 million acres seeded last year. Oat producers plan to seed or have seeded a total of 6.91 million acres of oats for 1994, down 13 percent from the 7.94 million acres seeded in 1993.

AGRICULTURE CHEMICAL USE

A portion of the fourth annual Ag Chemical Usage report issued by the National Agricultural Statistics Service (NASS) containing on-farm agricultural chemical use statistics is included in this Reporter. The full report and/or additional information can be obtained by calling our office at (800) 835-2612. The data presented in the report are part of the data series on chemical use funded through the 1990 Water Quality Initiative.

Wheat Highlights

Nitrogen fertilizer was applied to 86 percent of the winter wheat harvested acres in the 13 surveyed States. Areas applied exceeded 60 percent in all States except South Dakota. In the surveyed States, about half the harvested area received phosphate fertilizer. Usage ranged from 14 percent in Colorado and Oregon to 95 percent in Ohio. Potash was used on 15 percent of the 13 State area with the Soft Red Winter producing States treating the highest percentage.

All States treated at least a portion of the harvested area with herbicides. The most widely used, in area applied and quantity, was 2,4-D. Idaho, Montana, Oregon, and Washington treated over 90 percent of the harvested area with herbicides.

Fertilizer application in the four spring wheat States (MN, MT, ND, SD) averaged 87, 80, and 23 percent of the acreage for nitrogen, phosphate, and potash, respectively. Minnesota growers applied the highest coverage of nitrogen and potash and North Dakota applied the highest rate of phosphate.

Herbicides were widely used in all States, with 2,4-D and MCPA most prevalent. Insecticide and fungicide use was limited. (See tables on back page.)

PRICES RECEIVED

Montana crop prices for the full month of February decreased from the month prior. Winter wheat declined 1 cent to $3.36 per bushel. Other spring wheat dropped 14 cents to $3.62, and durum wheat fell 46 cents to $4.80 per bushel. All barley, at $2.01, remained unchanged from January. At $1.26, oats averaged 9 cents below the previous month. Alfalfa hay prices, at $68.00 per ton, decreased $2.00 from January, while other hay prices, at $58.00 per ton, decreased $1.00. The all wheat price for mid-March averaged $3.33 per bushel while the all barley price was $1.99.

Livestock prices for the full month of February were lower, compared with the previous month, except for cows. Cow prices were up $1.30 to $47.20 per cwt, while the average price for steers and heifers decreased $1.50 to $83.70 per cwt. Calf prices fell 70 cents to $97.70 per cwt. Milk prices decreased 20 cents to $14.30 per cwt. Prices received for sheep averaged $1.30 below last month at $32.40. Lamb prices fell 90 cents to $61.40 per cwt. Steer and heifer prices for mid-March averaged $83.20 per cwt.

Nationally, steer and heifer prices averaged $73.30, up 20 cents from January. Hogs sold in February averaged $47.90, $2.50 higher than last month. Egg producers received 63.7 cents per dozen during February, 1.8 cents above January's average.

The U.S. All Farm Products Index of Prices Received in March was 148 based on 1977=100, unchanged from February. Price gains from February for cattle, tomatoes, potatoes, and sweet corn offset price declines for hogs, onions, tobacco, and wheat.

FEBRUARY RED MEAT PRODUCTION

Montana slaughter plants produced 1.24 million pounds, dressed weight, of red meat during February 1994. This was a 21 percent decrease from January, but a 10 percent increase from a year ago.

The number of cattle slaughtered, was 1,400 head up 17 percent from last year. The average live weight was 1,158 pounds, up 24 pounds from 1993.

A total of 2,100 hogs were slaughtered in February, the same as a year ago. Average live weight increased 8 pounds to 249. Sheep and lamb slaughter, at 200 head, was the same as a year ago. Average live weight, at 124 pounds, increased 1 pound.

Commercial red meat production for the **United States** totaled 3.13 billion pounds during February. This production was 1 percent above the record high set in February 1984 and 4 percent above a year earlier.

Beef production totaled 1.80 billion pounds, up 7 percent from a year earlier. Head kill totaled 2.56 million, up 4 percent from a year earlier. The average live weight increased 31 pounds to 1,186 pounds. Veal production totaled 22.0 million pounds, up 1 percent from a year ago. Calf slaughter totaled 96,100 head, down 3 percent from a year earlier. The average live weight was up 11 pounds to 384 pounds.

Pork production, at 1.28 billion pounds, was down 1 percent from a year earlier. Hog kill totaled 6.95 million head, 2 percent below a year earlier. The average live weight increased 1 pound to 253 pounds. Lamb and mutton production, at 27.0 million pounds, was up 7 percent from a year earlier. Slaughter totaled 418,800 head, up 6 percent from a year earlier. The average live weight remained the same at 129 pounds.

January-February red meat production was 6.49 billion pounds, up 3 percent from the comparable period a year earlier. Accumulated beef production was up 7 percent, veal was up 3 percent, pork was down 3 percent, and lamb and mutton was up 3 percent.

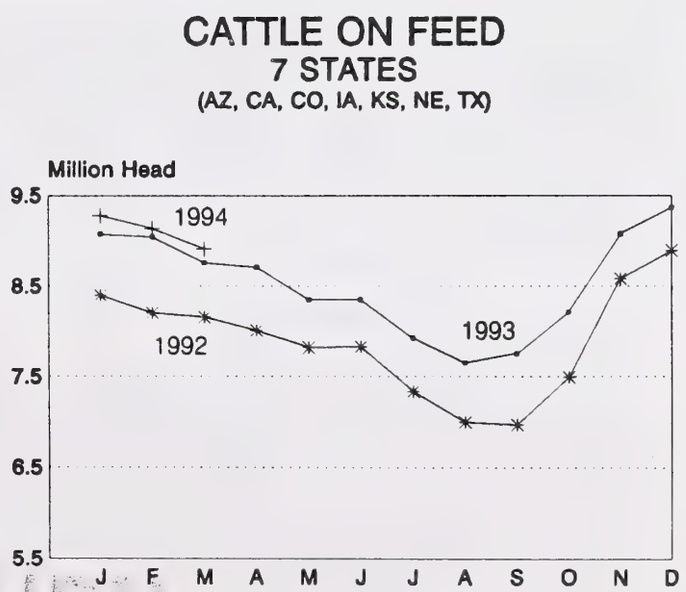
7 STATE CATTLE ON FEED UP 2 PERCENT

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 8.91 million head, up 2 percent from a year ago and up 9 percent from March 1, 1992. This is the largest March inventory for the 7 States since 1974.

Placements in feedlots during February totaled 1.35 million, 7 percent above 1993 but 10 percent below 1992. Net placements of 1.27 million for February were up 10 percent from last year but 7 percent below 1992.

Marketings during February totaled 1.50 million, up 4 percent from a year ago and 6 percent above 1992. Other disappearance during February was 76,000 head, 31 percent below last year and 37 percent below 1992.

Cattle and calves on feed March 1, 1994, for the 7 States in the feedlots with 1,000 or more head capacity totaled 7.81 million head, 4 percent above the previous year. The inventory in the 1,000+ capacity feedlots accounted for 87.7 percent of the total inventory.



PLEASE RETURN

MARCH 1 SHEEP AND LAMBS ON FEED

The number of sheep and lambs on feed March 1, 1994, for the slaughter market on **Montana** farms and ranches totaled 12,000 head, 500 head more than a year ago at this time. Lambs accounted for 83 percent of the total.

There were 10,000 lambs in feedlots, with 5,000 being in the 85-105 weight category. Montana placed 900 lambs on feed during January and February. Marketings during this period totaled 17,000 head, while 500 ewe lambs were returned to the breeding herd.

Sheep and lambs on feed March 1, 1994, for slaughter market in the **16 major producing States** totaled 1.22 million head, up 3 percent from the 1.18 million head in March 1993. The inventory included 1.17 million lambs for slaughter market and 43,000 mature sheep.

Of the total lambs on feed, 59 percent were in feedlots. Last March, 69 percent were in a feedlot and 31 percent were on pasture and/or crop residue. The percentage of feedlot lambs on March 1 by weight class were: 12 percent under 85 pounds, 34 percent between 85-105 pounds and 55 percent over 105 pounds. For lambs on pasture and/or crop residue, 34 percent were under 85 pounds, 33 percent between 85-105 pounds and 33 percent over 105 pounds.

Placements of lambs on feed in the 16 States during January and February 1994 totaled 426,000 head while marketings of fed lambs for slaughter during the same period totaled 654,000 head. Ewe lambs originally intended for slaughter but returned to the breeding herd as replacements during January and February 1994 totaled 15,500 head.

1993 RED MEAT PRODUCTION

Montana slaughter plants produced 17.3 million pounds, dressed weight, of red meat during 1993, up 1 percent from 1992. Cattle slaughter totaled 22.9 million pounds, hog slaughter was 6.8 million pounds, and sheep and lamb slaughter totaled 421 thousand pounds. A total of 19,000 cattle were slaughtered during the year, averaging 1,204 pounds. Hog slaughter amounted to 29,200 head with an average live weight of 234 pounds. The number of sheep and lambs slaughtered in 1993 was 3,600 head averaging 117 pounds, live weight.

Red meat production in commercial plants for the **United States** during 1993 totaled 40.8 billion pounds, 1 percent below 1992. Beef production was 23.0 billion pounds, down slightly from 1992. Veal production was 286 million pounds, down 8 percent from 1992. Pork production, at 17.1 billion pounds, was down 1 percent from 1992. Lamb and mutton production totaled 337 million pounds, down 3 percent from 1992.

Commercial cattle slaughter during 1993 totaled 33.3 million head, up 1 percent from 1992. The average live weight was 1,161 pounds, down 8 pounds from last year. Steers comprised 51.7 percent of the total federally inspected slaughter, heifers 28.1 percent, and dairy and beef cows slightly over 9 percent each.

Commercial calf slaughter, at 1.19 million head, was down 13 percent from the previous year. Average live weight was 388 pounds, up 12 pounds from 1992.

Commercial hog slaughter totaled 93.1 million head, down 2 percent from 1992. Average live weight rose 2 pounds to 254 pounds. Barrow and gilts were 95.0 percent of the total. Commercial sheep and lamb slaughter, at 5.2 million head, was down 6 percent from 1992. Average live weight was 127 pounds, compared with 125 pounds last year. Lambs were 94.1 percent of the total.

There were 1,030 slaughtering plants under fede inspection compared with 1,090 last year. Of these, 934 slaughtered cattle with twelve plants slaughtering almost half of the total head. Ten of the total 891 plants slaughtering hogs, accounted for almost 40 percent of the total. Likewise, four plants slaughtered over half of the sheep and lambs.

Total 1/	19,000	29,200	3,600	17,262

1/ Months may not add to totals due to rounding.

MARCH 1 POTATO STOCKS

Montana's March 1, 1994 potato stocks totaled 2.37 million cwt, up 8 percent from a year earlier. The amount in storage is 88 percent of 1993's total production, compared with 89 percent a year ago.

Stocks of potatoes in the United States on the first of March totaled 146 million cwt, down 4 percent from a year ago but slightly above two years ago. Disappearance reached a record high 220 million cwt of potatoes this season, 2 percent more than last year. Shrink and loss of 24.9 million cwt was 3 percent less than a year ago. Processor usage, at 106 million cwt of potatoes, was up 5 percent for the season. February processing was 16.0 million cwt, up 4 percent. Both were record highs.

Western States' potato stocks totaled 113 million cwt in six States, up 3 percent from last year and 5 percent above two years ago. Idaho's stocks were down 7 percent from last year and accounted for 53 percent of the Western holdings. California's stocks were down 7 percent and Colorado was off 8 percent. Oregon and Washington had the largest increase in stocks over last year, 48 and 21 percent, respectively.

1993 U.S. WOOL PRODUCTION DOWN 7 PERCENT

Montana wool growers produced 5.6 million pounds of wool during 1993, down 5 percent from 1992. The total value of wool produced, at $3.0 million, dropped 40 percent from last year. The total head shorn decreased 5 percent to 574,000, but the average fleece weight of 9.7 pounds remained unchanged from 1992. The average price per pound of wool sold was 54 cents, falling 31 cents from 1992.

Shorn wool production in the **United States** during 1993 was 77.3 million pounds, down 7 percent from 1992. Sheep and lambs shorn totaled 9.93 million head, a decrease of 5 percent from 1992. The average price paid for wool sold in 1993 was $0.51 per pound for a total value of $39.0 million, down 35 percent from $60.1 million in 1992.

MARCH 1 HOG AND PIG INVENTORY

U.S. inventory of all hogs and pigs on March 1, 1994, was 55.6 million head. This was 2 percent below March 1993 and 2 percent below the December 1, 1993, inventory.

Breeding inventory, at 7.03 million head, was down slightly from both March 1, 1993, and the previous quarter. Market hog inventory, at 48.6 million head, was 2 percent below both March 1, 1993, and December 1, 1993.

The December 1993-February 1994 U.S. pig crop was 22.6 million head, 1 percent less than 1993 and down 3 percent from the same period in 1992. Sows farrowing during this period totaled 2.80 million head, virtually unchanged from last year but 3 percent below two years ago. Pigs saved per litter was 8.08 compared to 8.14 during the same period a year ago.

U.S. producers intend to have 3.15 million sows farrow during the March-May 1994 quarter, 2 percent lower than actual farrowings during the same period last year and 7 percent below 1992. Farrowing intentions for June-August 1994, at 2.98 million sows, are the same as the actual 1993 farrowings and down 1 percent from 1992.

COMMODITY OVERVIEW

U.S. farm output to rebound: A return to normal weather in 1994 should set the stage for a more productive year for U.S. agriculture. With recovery from the flood and drought of 1993, crop production will likely increase 5 to 10 percent. Added to an expected record output of animal products, this would raise total farm production 5 percent from last year.

Higher prices for many commodities are expected, due to last year's smaller crop and reduced carryin. Larger output and higher crop prices will mean increased marketing revenue for farmers in 1994.

The strong growth in personal income combined with lower unemployment expected in the U.S. in 1994, will absorb much of the large meat supplies that are expected, supporting both grain and livestock prices. Stronger economic growth internationally will also support greater farm sales in 1994. The zero-to-negative real income growth achieved in 1993 by the developed countries is likely to be replaced by slow-to-moderate recoveries.

U.S. ag exports steady: U.S. agricultural exports for fiscal 1994 are again pegged at about $42.5 billion. With imports also forecast unchanged from last year, an agricultural trade surplus of $18 billion is again expected. Export volume, however, is expected to drop about 10 percent, mostly due to lower shipments of corn, wheat, and soybeans. The U.S. trade forecast for fiscal 1994 reflects:

- prospects for relatively weak economic growth in Europe and Japan;
- smaller U.S. grain and oilseed supplies;
- increased grain production by some competitors and importers; and
- uncertainties about exports to the former Soviet Union and China.

FEBRUARY EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 5.56 billion during February 1994, up 2 percent from the 5.43 billion produced a year ago. Production included 4.74 billion table eggs, 764 million broiler-type hatching eggs, and 58.0 million egg-type hatching eggs. The total number of layers during February 1994 averaged 288 million, up 2 percent from the 282 million a year ago. February egg production per 100 layers was 1,928 eggs, compared with 1,923 in February 1993.

All layers in the U.S. on March 1, 1994, totaled 289 million, compared with 282 million a year ago. The 289 million layers consisted of 239 million layers producing table or commercial type eggs, 47.0 million layers producing broiler-type hatching eggs, and 2.86 million layers producing egg-type hatching eggs. Rate of lay per day on March 1, 1994, averaged 69.6 eggs per 100 layers, up fractionally from last year's 69.4 eggs per 100 layers.

FEBRUARY MILK PRODUCTION

Milk production in the 21 major States during February totaled 9.79 billion pounds, 1 percent less than production in these same States in February 1993. January revised production at 10.6 billion pounds was 1 percent below January 1993.

Production per cow in the 21 major States averaged 1,221 pounds for February, 12 pounds more than February 1993. The number of cows on farms in the 21 major States was 8.02 million head, 175,000 head less than February 1993 and 24,000 less than January 1994.

During the October-December period, the 21 major States produced 30.8 billion pounds of milk, 84.2 percent of the U.S. production. If producers in the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 11.6 billion pounds for February 1994.

MONTANA WHEAT & BARLEY MOVEMENT

Wheat shipped to out-of-state destinations during June-November 1993, at 65.2 million bushels, was 65 percent above the same period last year.

Shipments to western destinations (primarily export facilities of Washington and Oregon) were 69 percent above the previous June-November period. Wheat movement to eastern destinations was up 53 percent. Shipments to other destinations (primarily Colorado and Arizona) were down 13 percent. Rail movement amounted to 60.5 million bushels, up from 35.2 million shipped by rail during the same period in 1992. Trucks carried 4.7 million bushels compared with 4.2 million the previous June-November period.

Montana barley shipped to out-of-state destinations in June-November 1993 was 12.6 million bushels, up 59 percent from the same period last year. Barley shipped west amounted to 10.5 million bushels, up 56 percent from the 6.7 million bushels in the June-November 1992 period. Eastern shipments totalled 1.8 million bushels, up 59 percent from the 1.2 million bushels the previous year. Movement to other destinations, totalling 236,000 bushels, was up 354 percent from the same period last year.

[1] Counties with less than 500 acres planted of one class of wheat are combined into "other" counties to avoid disclosure of individual information.
[2] Planted acres less winter wheat acres replanted to spring wheat.

PRICES RECEIVED

Montana crop prices for the full month of January were mixed. Winter wheat remained unchanged at $3.37 a bushel. Other spring wheat increased 3 cents to $3.76, and durum wheat rose 53 cents to $5.26 per bushel. All barley, at $2.01, dropped 14 cents from December. At $1.35, oats averaged 11 cents below the previous month. Other hay remained unchanged, at $59.00 per ton, while alfalfa hay prices, at $70.00 per ton, decreased $1.00 from December. The all wheat price for mid-February averaged $3.50 per bushel, while the all barley price was $1.99.

Livestock prices for the full month of January were higher, compared with the previous month, except for steers and heifers and lambs. Cow prices were up $1.30 to $45.90 per cwt, while the average price for steers and heifers decreased 40 cents to $85.20 per cwt. Calf prices rose $4.00 to $98.40 per cwt. Milk prices increased 20 cents to $14.40 per cwt. Prices received for sheep averaged $4.90 above last month at $33.70. Lamb prices fell $6.10 to $62.30 per cwt. Steer and heifer prices for mid-February averaged $83.40 per cwt.

Nationally, cattlemen received $73.10 for steers and heifers, up $1.10 from December's average. Hogs sold during January averaged $43.50 per cwt, up from the December average of $40.60. U.S. egg producers received 61.9 cents per dozen eggs, down 1.2 cents from December.

The U.S. All Farm Products Index of Prices Received in February was 147 based on 1977=100, unchanged from January. Price gains from January for hogs, lettuce, cotton, and strawberries offset price declines for cattle, milk, tomatoes, and sweet corn.

1993 ALFALFA SEED PRODUCTION

Montana alfalfa seed producers harvested 1.2 million pounds of seed in 1993, amounting to 48 percent of the previous year's production. Proprietary varieties made up 65 percent of this year's production, 33 percent was common uncertified varieties, and 2 percent certified public varieties.

The 1993 alfalfa seed yield per acre was 160 pounds, down from the 1992 yield of 265 pounds. Acres harvested for seed in 1993, at 7,500, is down 21 percent from 1992. The average price received for the 1993 crop was 97 cents per pound, up one cent from the average price of the 1992 crop.

JANUARY 1994 RED MEAT PRODUCTION

Montana slaughter plants produced 1.57 million pounds, dressed weight, of red meat during January 1994. This was a 1 percent decrease from December, and a 24 percent increase from a year ago.

The number of cattle slaughtered, at 1,900 head, is a 36 percent increase from last year. The average live weight, at 1,166 pounds, increased 43 pounds from 1993.

A total of 2,400 hogs were slaughtered in January, an increase of 100 from a year ago. Average live weight decreased 6 pounds to 246. Sheep and lamb slaughter, at 200 head, was the same as a year ago. Average live weight, at 107 pounds, decreased 19 pounds.

Commercial red meat production for the **United States** totaled 3.37 billion pounds during January. This production was 2 percent above a year earlier.

Beef production totaled 1.94 billion pounds, a 7 percent increase from a year earlier. Head kill totaled 2.74 million, up 3 percent from a year ago. The average live weight increased 27 pounds to 1,191 pounds. Veal production totaled 23.0 million pounds, up 4 percent from the record low a year ago. Calf slaughter totaled 102,000 head, down 2 percent from a year earlier. The average live weight was up 20 pounds to 385 pounds.

Pork production, at 1.38 billion pounds, was down 4 percent from a year earlier. Hog kill totaled 7.47 million head, 5 percent below a year earlier. The average live weight remained the same at 254 pounds. Lamb and mutton production, at 25.0 million pounds, remained the same as a year earlier. Slaughter totaled 394,600 head, virtually unchanged from a year earlier. The average live weight was down 1 pound to 127 pounds.

7 STATE CATTLE ON FEED UP 1 PERCENT

February 1 cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 9.14 million head, up 1 percent from a year ago and up 11 percent from February 1, 1992. This is the largest February 7-State inventory since 1974.

Placements in feedlots during January totaled 1.54 million, 5 percent below 1993 and 1 percent below 1992. Net placements of 1.47 million for January were down 1 percent from last year but fractionally above 1992.

Other disappearance during January was 71,000 head, 45 percent below last year and 28 percent below 1992. Marketings during January totaled 1.61 million, up 6 percent from a year ago but 3 percent below 1992.

Cattle on feed February 1, 1994, for the 7 States in the feedlots with 1,000 or more head capacity totaled 7.95 million head, up 2 percent from the previous year. The inventory in the 1,000+ capacity feedlots accounted for 87.0 percent of the total inventory.

FARM LABOR WAGE RATES UP, WORKERS DOWN

There were 2.48 million people working on the Nation's farms and ranches during the week of January 9 - 15, 1994. This compares with 2.51 million people during the January 1993 survey week. Self-employed farm operators accounted for 1.37 million of the total, along with 336,000 unpaid workers, and 637,000 workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 140,000 workers.

Farm operators paid their hired workers an average wage of $6.54 per hour during the January 1994 survey week. This rate was up 14 cents from a year earlier. Workers paid on an hourly basis earned $6.11 per hour compared with $5.99 in January 1993. Field workers received an average of $6.14 per hour, up 12 cents from the January 1993 survey week. Livestock workers earned $5.75 per hour compared with $5.64 a year earlier.

Benefits, such as housing and meals, were provided to 45 percent of the hired workers during the survey week, compared to 45 percent in January 1993.

Farm operators in the Mountain I region, which includes Montana, Idaho, and Wyoming, paid their hired workers an average wage of $6.76 per hour during the January 1994 survey week, up 11 percent from a year ago. Field workers received $5.76, a decrease of $1.10, while livestock workers received $6.09, up 14 cents from a year ago.

JANUARY MILK PRODUCTION

Milk production in the 21 major States during January totaled 10.6 billion pounds, 1 percent less than production in these same States in January 1993. December revised production, at 10.5 billion pounds, was 2 percent below December 1992.

Production per cow in the 21 major States averaged 1,319 pounds for January, 14 pounds more than January 1993. The number of cows on farms in the 21 major States was 8.04 million head, 178,000 head less than January 1993 and 13,000 less than December 1993.

During the October-December period, the 21 major States produced 30.8 billion pounds of milk, 84.2 percent of the U.S. production. If producers in the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 12.6 billion pounds for January 1994.

FEBRUARY 1 POTATO STOCKS

Montana's February 1, 1994 potato stocks totaled 2.4 million cwt, up 9 percent from a year earlier. The amount in storage is 90 percent of 1993's total production, compared with 91 percent a year ago.

February 1, 1994 potato stocks totaled 178 million cwt for the U. S., down 4 percent from a year earlier and slightly below two years ago. Disappearance was a record high 188 million cwt, up 2 percent from each of the last two years. Processing accounted for 90.0 million cwt through January, 6 percent more than last year and 5 percent above two years ago. Shrink and loss of 22.7 million cwt was down 1 percent from last year but 7 percent above two years ago. Storages held 49 percent of 1993 fall production on February 1, one percentage point less than last year. Stocks by type were 2 percent red, 16 percent white, and 82 percent russet, with more russet and less white and red than a year ago.

Western States held 134 million cwt of potatoes in storage on February 1, 1994. This is up 3 percent from last year and 4 percent above two years ago. Oregon's stocks were up 36 percent and Washington gained 18 percent. Idaho's stocks were off 5 percent and accounted for 52 percent of the Western total. Colorado's stocks were down 2 percent from last year and California's storage was off 6 percent.

JANUARY EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 6.14 billion during January 1994, up 2 percent from the 6.03 billion produced a year ago. Production included 5.24 billion table eggs, 833 million broiler-type hatching eggs, and 61.0 million egg-type hatching eggs. The total number of layers during January 1994 averaged 288 million, up 2 percent from the 282 million a year ago. January egg production per 100 layers was 2,132 eggs, compared with 2,138 in January 1993.

All layers in the U.S. on February 1, 1994, totaled 288 million, compared with 283 million a year ago. The 288 million layers consisted of 238 million layers producing table or commercial type eggs, 46.7 million layers producing broiler-type hatching eggs, and 2.81 million layers producing egg-type hatching eggs. Rate of lay per day on February 1, 1994, averaged 68.1 eggs per 100 layers, down fractionally from last year's 68.2 eggs per 100 layers.

Monthly estimates of layers and egg production for individual States have been expanded from 20 States to 30 beginning with this January 1994 report. The 30 major states account for approximately 94 percent of the total U.S. egg production. Estimates for the other 20 States are combined and published monthly as "Other States." Quarterly estimates for minor States, including Montana, are discontinued. Estimates of layers and egg production for the minor States will be published annually.

MONTANA'S HONEY PRODUCTION DROPPED 11 PERCENT

Montana's honey production from producers with 5 or more colonies in 1993 totaled 8.5 million pounds, down 11 percent from 1992. There were 87,000 colonies producing honey in 1993, the same as last year. Yield per colony averaged 98 pounds, down 12 pounds from the previous year. Honey stocks held by producers on December 15, 1993, totalled 1.5 million pounds, down 20 percent from a year ago.

The average price per pound reported by Montana apiarists was 54 cents, down 1 cent from the previous year. The 1993 value of production for Montana's honey was 4.6 million dollars, compared with 5.3 million dollars in 1992.

U.S. honey production in 1993 from producers with five or more colonies totaled 230 million pounds, up 4 percent from 1992. There were 2.88 million colonies producing honey in 1993, compared with 3.03 million in 1992. Yield per colony averaged 80.1 pounds, up 7.3 pounds from the 72.8 pounds in 1992. Colonies that produced in more than one State were counted in each State and yields may be understated. Producer honey stocks were 49.1 million pounds on December 15, 1993, up 26 percent from a year earlier.

Prices for the 1993 crop averaged 54.4 cents per pound, down 1 percent from the 1992 price of 55.0 cents per pound. Prices are based on retail sales by producers and sales to private processors and co-ops. At the U.S. level, prices for each color are derived by weighting State average prices by the State quantities sold. Government payments are excluded from the honey prices. Lower prices received for water white and extra light amber resulted in the lower price for all honey in 1993.

SPECIAL THANKS to all livestock producers responding to our January 1 cattle and sheep inventory surveys. Field and telephone enumerators contacted over 2,000 Montana farmers and ranchers early in January. Names were selected on a statistical probability basis. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics for a more efficient production and marketing system.

JANUARY 1 CATTLE AND CALF INVENTORY

Montana's January 1, 1994 cattle and calf inventory, at 2.5 million head, is up 2 percent from last year. The value of Montana's cattle and calf inventory rose 5 percent from 1993 to 1.9 billion dollars. Average value per head in the 1994 inventory rose 20 dollars to 775 compared with 755 dollars a year ago. The 1993 calf crop totaled 1.42 million head, down 1 percent from 1992.

Beef cow numbers, at 1.438 million head, dropped 2 percent from last year. However, heifers weighing 500 pounds or more for beef cow replacements increased 3 percent to 355,000 head. Milk cow numbers continued to decline as numbers dropped 1,000 head to 22,000. However, milk cow replacements continued to hold steady at 8,000 head.

Most of the increase in the cattle and calf inventory was due to a 39 percent increase in steers weighing 500 pounds or more and a 38 percent increase in other heifers weighing 500 pounds or more. There were 260,000 steers and 210,000 heifers in the January 1 inventory. These increases are partly due to the favorable range and pasture conditions during the year that produced heavier weaning weights. The favorable range and pasture conditions also resulted in a decrease in the number of calves weighing less than 500 pounds. They dropped 34 percent from last year to 125,000 head. The number of bulls dropped 4 percent to 82,000 head.

All cattle and calves in the United States as of January 1, 1994, totaled 101.7 million head, 1 percent above the revised 100.6 million on January 1, 1993, and 2 percent above the 99.6 million two years ago.

All cows and heifers that have calved, at 44.5 million, were 2 percent above both last year and two years ago. Beef cows, at 34.9 million, were up 3 percent from both January 1, 1993, and two years ago. Milk cows, at 9.64 million, were 2 percent below January 1, 1993, and 3 percent below 1992.

Other class estimates on January 1, 1994, and the changes from January 1 last year and two years ago, respectively, are as follows:

- All heifers 500 pounds and over, 19.7 million, up 3 percent and up 9 percent.
- Beef replacement heifers, 6.42 million, up 4 percent and up 11 percent.
- Milk replacement heifers, 4.20 million, virtually unchanged from both years.
- Other heifers, 9.05 million, up 5 percent and up 11 percent.
- Steers weighing 500 pounds and over, 17.2 million, up 1 percent and up 3 percent.
- Bulls weighing 500 pounds and over, 2.32 million, up 1 percent and up 2 percent.
- Calves under 500 pounds, 18.0 million, down 2 percent and down 4 percent.

The 1993 calf crop was 39.6 million head, up 1 percent from 1992 and up 2 percent from 1991. Calves born during the first half of the year totaled 28.9 million head, up slightly from 1992 and up 1 percent from 1991.

JANUARY 1, 1994 SHEEP INVENTORY

The number of sheep and lambs on **Montana** farms and ranches totaled 502,000 head on January 1, 1994. The sheep and lamb inventory is down 6 percent from last year.

Ewes one year and older were down 3 percent, at 380,000 head. The 1993 lamb crop was down 7 percent at 460,000 head. The average value of sheep and lambs on Montana farms and ranches January 1, 1994 was $1.00 below last year at $65.00 per head.

All sheep and lamb inventory in the **United States** on January 1, 1994, totaled 9.08 million head, down 9 percent from a year earlier and 11 percent below the record low of 10.1 million head set in 1986. Total stock sheep and lambs and ewes one year old and older also set record lows. The value of sheep and lambs totaled $638.6 million, 9 percent below a year earlier. The average value per head was $70.30, 10 cents above a year earlier.

Stock sheep inventory decreased to 7.24 million head on January 1, 1994, down 11 percent from 8.14 million last year. This is the lowest level ever recorded. Ewes one year old and older, at 5.79 million head, were down 10 percent. This compares with the previous record low of 6.42 million head set last year.

The 1993 lamb crop of 6.31 million head was down 13 percent from 1992. This compares with the lowest level of 7.21 million head set in 1988. The 1993 lambing rate was 98 per 100 ewes one year old and older on hand January 1, 1993, compared with 102 in 1992.

JANUARY PRICES RECEIVED

Montana crop prices for mid-January were mixed. Winter wheat was down 2 cents to $3.35, while durum, at $5.50, increased 77 cents from December. Other spring wheat is currently averaging $3.80 per bushel, up 7 cents from last month. All barley was $2.23, rising 8 cents from December. Oats averaged $1.35, 11 cents below the previous month. Alfalfa hay, at $70.00 per ton, dropped $1.00 from December, while other hay remained unchanged at $59.00 per ton.

Livestock prices for mid-January were mostly higher with the exception of lambs and steers and heifers. Prices for sheep increased $1.20 per cwt from last month to $30.00. Lambs dropped $5.00 to $63.40. Cow prices rose 80 cents to $45.40 per cwt, while steer and heifer prices decreased $1.60 to $84.00 per cwt. Calves averaged $98.00 per cwt, up $3.60 from December. Milk prices moved up 20 cents to $14.40 per cwt.

The U.S. All Farm Products Index of Prices Received in January was 148 based on 1977=100, up 3 points (2.1 percent) from December 1993. Price gains from December for hogs, corn, cotton, and onions more than offset price declines for grapefruit, strawberries, turkeys, and lemons.

Compared with a year earlier, the January All Farm Products Index was 10 points (7.2 percent) higher. Price increases from January 1993 for milk, corn, soybeans, and tomatoes more than offset price decreases for cattle, celery, lettuce, and carrots.

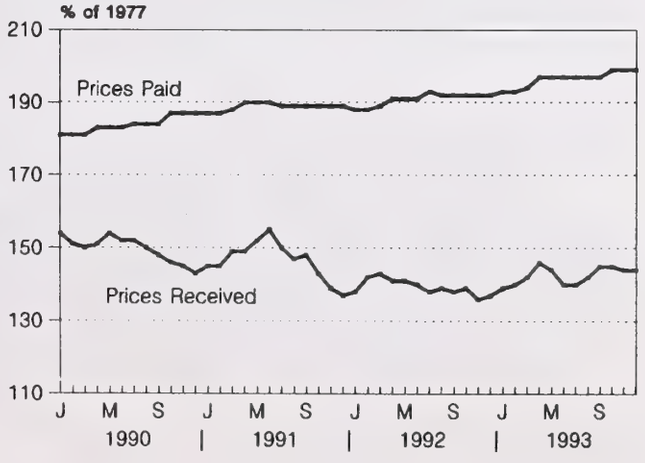
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



CATTLE ON FEED UP 2 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed for slaughter market in the 13 States preparing quarterly estimates totaled 11.1 million head, up 2 percent from a year ago and up 9 percent from January 1, 1992. This is the largest January inventory for the 13 States since 1979. The inventory included 7.20 million steers and steer calves, fractionally above a year ago. This group accounts for 64.9 percent of the total inventory. Heifers and heifer calves accounted for 3.81 million head, 5 percent above a year ago.

Placements of cattle and calves on feed in the 13 States during the October-December 1993 quarter totaled 7.04 million, down 6 percent from last year and 1 percent below October-December 1991. **Net placements** of 6.72 million for October-December were 6 percent below last year and down 1 percent from October-December 1991.

Other disappearance totaled 315,000 head compared to 320,000 in October-December 1992 and 309,000 in October-December 1991. Marketings of fed cattle during the October-December 1993 quarter totaled 5.28 million, up 2 percent from the same quarter last year and fractionally above two years ago.

JANUARY 1 SHEEP AND LAMBS ON FEED

The number of sheep and lambs on feed January 1, for the slaughter market, on Montana farms and ranches totaled 32,000 head, down 2,000 head from last January. Lambs accounted for approximately 90 percent of the total--18,000 of which were in feedlots. The feedlot weight group with the largest number of head was the 85 to 105 pound range with 11,000 head. Of the 10,000 head of lambs on pasture and/or crop residue, 6,000 head weighed between 85 and 105 pounds.

Sheep and lambs on feed January 1, 1994, for slaughter market in the 16 major producing States totaled 1.64 million head, down slightly from the 1.65 million head in January 1993. The inventory included 1.53 million lambs for slaughter market and 113,000 mature sheep. Lambs on feed declined 2 percent from a year ago, but mature sheep on feed increased 31 percent.

Of the total lambs on feed, 63 percent were in feedlots with the majority being in the 85 to 105 pound weight class. The majority of the lambs on pasture and/or crop residue were also classified in this weight range.

Montana 1993 Crop Production

Montana's 1993 growing season was unusually wet and cool. Cereal grain harvest dragged on late into the fall because of heavy yields and unfavorable harvest weather. The final production estimate, after harvest, showed wheat production at 204.5 million bushels. This is 7.7 million bushels above the October 1 forecast, and the largest wheat crop ever harvested in Montana. The previous record was 180.3 million bushels harvested in 1982. Average yield, at 39.2 bushels per harvested acre, was a new record, replacing the previous record of 36.4 set in 1991.

Winter wheat yield was a new record at 42 bushels, replacing the 40 bushel record of 1991. Winter wheat production at 102.9 million bushels was still below the record winter wheat crop of 1975 which totaled 105.0 million. **Spring wheat, other than Durum**, set a new record yield and production. Spring wheat yield at 37 bushels per harvested acre exceeded the 1991 record of 34 bushels. Production was 98.1 million bushels topping the 1982 record of 89.9 million. **Durum wheat** acreage has been trending down for 4 years and this year's yield and production were both below last year. Production was 3.5 million bushels, 32 percent less than the 1992 crop. This is the smallest durum crop since the drought plagued year of 1988.

Barley set a new yield record of 58 bushels per acre, 6 bushels above the previous record set in 1991. Harvested acreage at 1.1 million was the smallest since 1980. In spite of smaller harvested acreage, production was 137.2 million bushels, almost 9 percent more than last year. **Oats** yield, at 65 bushels per harvested acre, set a new record. However, harvested acres at 70,000 matched previous lows in 1990 and 1992; all three are the smallest harvested acreage since 1889. The 1993 production totaled 4.6 million bushels, 16 percent above last year's crop.

Montana Crop Production Value up 2 Percent

Montana's 1993 wheat crop is valued at 712 million dollars, 49 percent above the 1992 crop. Record yields and production that was 46 percent above the previous year pushed the 1993 wheat crop value to the highest level ever recorded. Record high spring wheat production contributed slightly more than half the wheat value. The durum crop value added 2 percent, and winter wheat accounted for 47 percent. The season average price used to value the 1993 wheat crop was $3.55 per bushel, up 13 cents from 1992.

Barley production exceeded the 1992 crop by 21 percent, but the average price per bushel was off 24 cents. Value of production totaled 137 million dollars, 9 percent more than the 1992 crop.

Hay production set a new record high in 1993, and with the season average price only slightly lower, value of production was a record high 353 million dollars.

January 1 Potato Stocks

January 1, 1994, potato stocks totalled 209 million cwt in the 15 storage States, down 3 percent from a year earlier and 1 percent below two years ago. So far this season, disappearance was up 3 percent, helped by a 5 percent gain in processing. Shrink and loss of 20.3 million cwt was down slightly from last year.

Storage accounted for 57 percent of fall production this year, 2 percentage points less than last year. Stocks by type are 2 percent red, 17 percent white, and 81 percent russet, but more russets and less whites and reds than a year ago.

Processor usage totaled 75.4 million cwt to January 1, 1994, up 5 percent from a year ago and 6 percent above two years ago. December processing of 13.9 million cwt was short of a year ago by 1 percent but 12 percent above two years ago.

Western States held 155 million cwt of potatoes in storage on January 1, 1994. This is up 4 percent from the last two years. The big gainers were Washington and Oregon, up 22 and 27 percent, respectively. **Montana** producers held 2.5 million cwt in storage, 9 percent more than January 1, 1993. Stocks in Montana storages represented 93 percent of production, the same portion held at this time last year. Colorado's potato stocks increased 2 percent. Idaho's stocks were off 5 percent from last year but were 1 percent above two years ago.

October-December Milk Production

During the October - December quarter, **Montana** milk cows produced 76 million pounds of milk, a 5 percent decrease from the same period a year ago. The number of milk cows in Montana decreased 4 percent from a year ago to 22,000 head.

Grain and other concentrates fed to Montana's milk cows on January 1, averaged 18.3 pounds per cow. This is an 11 percent increase from a year ago. The value of grain and other concentrates fed to cows on January 1, averaged $7.70 per cwt, $0.55 more than January 1, 1993.

During the October-December period, the 21 major States produced 30.8 billion pounds of milk, 84.0 percent of the U.S. production. If producers in the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 12.3 billion pounds for October, 11.9 billion pounds for November, and 12.4 billion pounds for December.

The quarterly production of milk for the U.S. was 36.6 billion pounds, 1 percent below the 1992 October-December period. The average number of milk cows in the U.S. during the October-December quarter was 9.66 million head, 165,000 less than the same period a year earlier.

Grain and other concentrates fed to milk cows on January 1, 1994, averaged 18.5 pounds per cow, 0.1 pound more than January 1, 1993. The value of grain and other concentrates fed to cows on January 1, averaged $8.18 per cwt, $0.51 more than January 1, 1993.

Milk production in the 21 major States during December totaled 10.4 billion pounds, 2 percent less than production in these same States in December 1992. November revised production at 10.0 billion pounds was 2 percent below November 1992.

December Red Meat Production Increases

Montana slaughter plants produced 1.6 million pounds, dressed weight, of red meat during December 1993. This was a 7 percent increase from the previous month, and a 2 percent increase from a year ago.

The number of cattle slaughtered, at 1,900 head, is the same as last year. The average live weight, at 1,157 pounds, decreased 12 pounds from 1992. A total of 2,300 hogs were slaughtered in December, an increase of 100 from a year ago. Average live weight decreased 10 pounds to 233. Sheep and lamb slaughter, at 300 head, was the same as a year ago.

Commercial red meat production for the United States totaled 3.55 billion pounds during December. Red meat production was 3 percent above the record high set in December 1992.

Beef production totaled 1.95 billion pounds, up 5 percent from December 1992. Head kill totaled 2.77 million, up 3 percent from a year ago. The average live weight increased 17 pounds to 1,188 pounds. Veal production totaled 24.0 million pounds, down 8 percent from a year ago, and tied December 1973's record low.

Pork production, at 1.55 billion pounds, was up 2 percent from the record high set in December 1992. Hog kill totaled 8.39 million head, slightly above a year earlier. The average live weight was up 3 pounds to 257 pounds. Lamb and mutton production, at 28.0 million pounds, was down 6 percent from a year earlier. Slaughter totaled 443,000, down 7 percent.

January-December red meat production was 40.6 billion pounds, down 1 percent from the comparable period a year earlier. Accumulated beef production was down slightly, veal dropped 10 percent, pork dipped 1 percent, and lamb and mutton declined 5 percent.

1993 Egg Production and Chicken Inventory

Montana poultry flocks produced 125 million eggs during the year ending November 30, 1993, down 35 million from the previous year's production. Layer numbers during 1993 averaged 460,000 compared with 602,000 a year earlier. The annual average production per layer on hand was 271 eggs, 2 percent above 1992.

There were 550,000 total chickens on Montana farms and ranches on December 1, 1993, compared with 710,000 on hand last year. The inventory value was $1,485,000, down from $1,846,000 on December 1, 1992.

U.S. egg production during the year ending November 30, 1993, totaled 71.4 billion eggs, up 1 percent from last year's total of 70.5 billion eggs. Layer numbers during 1993 averaged 283 million layers, up 2 percent from 1992. The annual average production per layer on hand in 1993 was 252 eggs, down from the 1992 average of 253 eggs per layer.

The total number of chickens on hand on December 1, 1993, (excluding broilers) was 378 million head, 3 percent above last year. The total value was $894 million, up from $830 million on December 1, 1992.

December Egg Production Up 2 Percent

U.S. egg production totaled 6.25 billion during December 1993, up 2 percent from the 6.11 billion produced a year ago. Production included 5.36 billion table eggs, 827 million broiler-type hatching eggs, and 58.0 million egg-type hatching eggs. The total number of layers during December 1993 averaged 289 million, up 2 percent from the 282 million a year ago. December egg production per 100 layers was 2,166 eggs, compared with 2,169 in December 1992.

All layers in the U.S. on January 1, 1994 totaled 288 million, compared with 282 million a year ago. The 288 million layers consisted of 239 million layers producing table or commercial type eggs, 46.3 million layers producing broiler-type hatching eggs, and 2.66 million layers producing egg-type hatching eggs. Rate of lay per day on January 1, 1994, averaged 69.4 eggs per 100 layers, down fractionally from last year's 69.6 eggs per 100 layers.

The 30 major states accounted for about 94 percent of the U.S. egg production and layer numbers during the 3 month period, September through November 1993. Production for the other states are grouped into an *other states* category and combined with the 30 States published individually to obtain an U.S. estimate.

Highlights:

Winter Wheat Seedings
Hay Stocks & Late Season Crops
December 1 Grain Stocks
December Prices Received
Hog & Pig Inventory

Crop acreage, grain stocks, and hog and pig estimates included in this issue of the Reporter are the results of surveying over 2,000 Montana farmers and ranchers during December. Names were selected on a probability basis. A SPECIAL THANKS to those of you interviewed for this very important end-of-season survey. Only by your voluntary cooperation can those in agriculture be served with accurate, reliable statistics.

1994 WINTER WHEAT SEEDINGS

Montana farmers seeded 2.2 million acres of winter wheat last fall for harvest in 1994. This is a 17 percent decline from the 1993 seeded acreage. Delayed harvest of the 1993 cereal grain crops pushed winter wheat seeding for the 1994 crop late into the fall. By mid-October, when more than 95 percent of the winter wheat acreage would normally be seeded, only 83 percent of the 1994 seedings were in the ground. By November 1 only 67 per cent of the acreage had emerged, 20 points below normal. However, soil moisture was mostly adequate or surplus, and nearly 80 percent of the crop was rated in good to excellent condition.

Nationally, winter wheat area seeded for the 1994 crop is estimated at 50.6 million acres, down 2 percent from 1993. This would be the lowest seeded area since 1988. Planting began last August in several States with about 2 percent of the crop in by September 1. Planting progressed favorably in many areas but less so in others, finally reaching 98 percent completion by December 1.

Hard red winter wheat, at 35.8 million acres, is down 2 percent from 1993, largely because of 450,000 and 300,000 acre drops in Montana and Texas, respectively. Most hard red areas are down from last year. Only Colorado, Kansas, and Oklahoma have seeded more acreage than a year ago. California and South Dakota are unchanged.

Extremely late 1993 spring wheat harvests limited Montana growers' opportunity to seed winter wheat. Dry planting conditions curtailed acreage in the Plains and central areas of Texas; the wheat that did get in needs rain. Seeding and emergence progressed ahead of average in Colorado; the crop rated 80 percent good or better going into winter. Conditions were generally favorable in Oklahoma, but some re-planting was needed in the few dry areas. Wetness prevented seedings in some north central Kansas counties. California's emerged wheat rated mostly good or better as seeding continues.

HAY STOCKS AND LATE SEASON CROPS

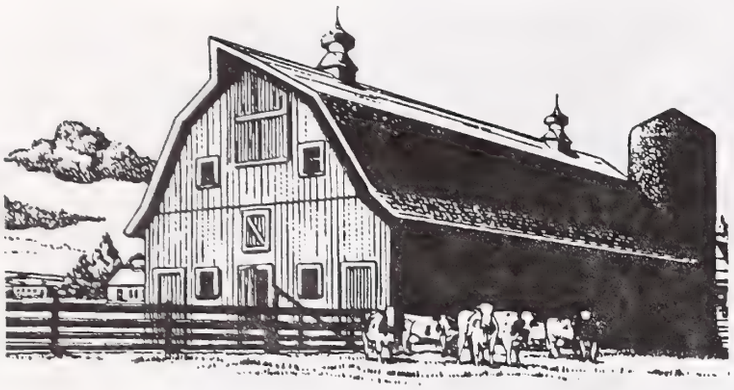
Montana farmers and ranchers had 4.7 million tons of hay on hand December 1, 1993, 17 percent more than a year earlier. The higher stocks are due to lower hay consumption and higher hay production during the past year. The unusually cool and wet weather during the year resulted in pasture and range conditions that were good to excellent throughout the state.

Montana's total hay production for 1993 was an historic high at 5.2 million tons, an increase of 11 percent from last year. While the abundant amount of precipitation received during the growing season produced a record hay crop, hay quality was poorer than in previous years. Alfalfa hay production in 1993 tied a record high at 3.8 million tons, up 12 percent from 1992. Production of all other hay was 1.5 million tons, up from 1.4 million last year. Other hay and all hay yields, at 1.70 and 2.21 tons per acre respectively, were record highs.

Montana corn producers harvested 840,000 million bushels of corn for grain and 990,000 tons of corn silage in 1993, compared with 2.75 million bushels of grain and 903,000 tons of silage last year. Sugar beet growers harvested 1.2 million tons in 1993, down 8 percent from last year. Dry bean production, at 155,000 cwt was down 11 percent from last year.

Hay stocks on farms for the **U.S.** totaled 102 million tons on December 1, 1993, 4 percent less than the amount on hand a year earlier. Nationally, the 1993 corn for grain production was estimated at 6.34 million bushels, 33 percent below the record high 1992 crop and 2 percent below the November 1 forecast. Corn silage production was estimated at 82.1 million tons, 6 percent below last year.

Nationally, the production of dry edible beans totaled 21.8 million cwt in 1993, down 3 percent from a year earlier and 35 percent below two years ago. This is the smallest dry bean crop since 1988.



DECEMBER AGRICULTURE PRICES

Prices received by Montana farmers and ranchers in mid-December were mostly higher than the November average. Compared with the previous year, changes were mixed. The mid-December winter wheat price, at $3.25 per bushel, was 7 cents above November, but still 10 cents below last year's December price. Durum moved up 70 cents from last month and, at $4.80, was $1.73 higher than last year. Other spring wheat was $3.50 in mid-December, up 15 cents from November, but 9 cents below last December.

Barley was $2.14 per bushel, up 10 cents from November, but 24 cents below last year. Oats, at $1.30, were down from last month, but 35 cents above last year. Alfalfa hay advanced $2.00 per ton from November, and was $1.00 above last year.

Steer and heifer prices averaged $84.70 per hundredweight at mid-December, down $2.00 from November, but 90 cents above the December 1992 price. Cows, at $44.10, were off $1.90 from last month and $1.40 below last year.

Calf prices held up well compared with both last month and last year. Mid-December averaged $95.90, which was up 80 cents from November and $1.30 above December last year. Mid-December sheep prices moved up $2.50, but still lagged behind last year by $2.10. Lamb prices also moved higher, averaging $68.40, up $1.70 from November and $1.20 above last year.

The U.S. All Farm Products Index of Prices Received in December was 144 based on 1977=100, unchanged from November 1993. Price gains from November for wheat, corn, tomatoes, and strawberries offset price declines for hogs, cattle, oranges, and lemons.

Compared with December 1992, the All Farm Products Index was 7 points higher. Price increases from December 1992 for milk, corn, soybeans, and sorghum more than offset price decreases for cattle, hogs, lettuce, and apples.

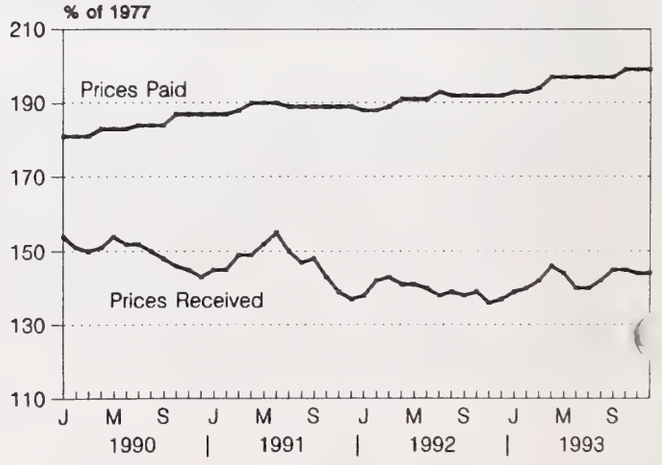
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



DECEMBER 1 GRAIN STOCKS

Wheat stocks in all storage positions in Montana on December 1, 1993, totaled 176 million bushels, 46 percent more than a year ago. Stocks on farms were up 53 percent at 150 million bushels. Elevator stocks, at 26 million bushels, were up 13 percent. On-farm storage held 67 million bushels of winter wheat, up 56 percent, and 83 million bushels of spring wheat up 51 percent. Elevators stored 13.5 million bushels of winter wheat, up 32 percent, and 12.5 million bushels of spring wheat, down 2 percent. Durum in all storage positions totaled 5.1 million bushels, down 20 percent.

Barley in storage totaled 50.2 million bushels, up 25 percent from a year ago. On-farm storage held 42 million bushels, up 31 percent and elevators held 8.2 million bushels, up 2 percent. Oats stocks totaled 4.08 million bushels, up 6 percent from a year ago.

Nationally, all wheat in all storage positions on December 1, 1993, totaled 1.59 billion bushels, down slightly from December 1, 1992. Of the total, 656 million bushels were stored on farms, down 2 percent from last December 1. Off-farm stocks are 930 million bushels, up 1 percent from last year. The September-November 1993 indicated disappearance is 540 million bushels, up 4 percent from the same quarter in 1992.

Barley stored in all positions on December 1, 1993, is estimated at 334 million bushels, down 4 percent from the stocks of December 1, 1992.

INVENTORY OF HOGS AND PIGS DOWN

Montana's hog inventory on December 1, 1993 totaled 180,000 head, down 16 percent from last year. There were 20,000 breeding hogs on hand, 4,000 head less than a year ago. Market class hogs, at 160,000 head, were down 16 percent or 31,000 head from December 1, 1992. The 1993 pig crop, at 355,000 head, declined 8 percent from the previous year.

The average value per head rose $6.00 from last year to $80.00 per head, while the total value of Montana's hog and pig inventory on December 1, 1993 dropped to 14.4 million dollars from 15.9 million dollars the previous year. This is a 9 percent decline from last year and is due to the decreased inventory on December 1 of this year. The number of operations with hogs in Montana during the year totaled 1,200 compared to 1,100 operations a year ago.

U.S. inventory of all hogs and pigs on December 1, 1993, was 56.8 million head, down 2 percent from December 1992 and 4 percent below the September 1, 1993 inventory. Breeding inventory, at 7.03 million head, was down 1 percent from both December 1, 1992 and September 1, 1993. Market hog inventory, at 49.8 million head, was 2 percent below December 1, 1992, and 4 percent below September 1, 1993.

The September-November 1993 U.S. pig crop was 22.9 million head, 5 percent less than 1992 and down 2 percent from the same period in 1991. Sows farrowing during this period totaled 2.85 million head, down 5 percent from last year and 4 percent below two years ago. U.S. producers intend to farrow 2.85 million sows during the December 1993-February 1994 quarter, 2 percent more than the actual farrowings during the same period last year, but 2 percent below 1992.

Value per head averaged $75.40 on December 1, 1993, compared with $71.30 in 1992 and $68.90 in 1991. The December 1, 1993 inventory was valued at $4.28 billion, compared to $4.15 billion on December 1, 1992. The number of operations in the United States with hogs totaled 235,840 during 1993, down 5 percent from last year and 7 percent below 1991.

HELENA, MONTANA 59620

All of us at the Montana Agricultural Statistics Service would like to take this opportunity to wish each of you a very Merry Christmas and a Happy New Year. As 1993 comes to a close, we should take a moment to reflect back on what has happened this year. Many areas of Montana experienced one of the wettest years on record which slowed planting, crop development and finally harvest. All of this moisture produced the largest wheat crop in our history, but also caused many quality problems. Despite the large crops, prices for grains and livestock have held up pretty well. Now we can look forward to what 1994 has in store for us. We would like to thank each of you for the important part you played in providing the basic information needed to publish Montana's agricultural statistics. May you and your family have a prosperous and joyful New Year.

MONTANA FRUIT TREES

Fruit production is an important factor in the Lake, Flathead, and Ravalli County economies. The Flathead Lake area in northwest Montana produces a high quality sweet cherry which reaches market late in the season when there is little competition from the major producing areas. Sweet cherries are grown principally along the eastern and southern shores of Flathead Lake in Lake and Flathead counties. Tart cherries are grown mostly in Ravalli County. Apples are primarily in Lake and Ravalli counties.

Survey Purpose: The Montana fruit tree survey was conducted in mid-1993. The previous fruit tree survey was conducted in mid-1972. The 1972 survey was limited to cherries. The purpose of these surveys is to provide an inventory of trees by age and variety at a specific point in time. Also, changes between time periods can be illustrated. By comparing data obtained in the 1972 and 1993 surveys, one can see the changes in the 20-year period. Trends established in that interval can be projected into the future to gain some insight regarding the direction and magnitude of change that can be expected for the industry in coming years.

Methods Used to Obtain Data: Names of commercial growers were obtained from fruit cooperatives, processors, county extension agents, and other growers. A mail questionnaire was sent in May 1993 requesting information on tree numbers, acreage, ages, and variety. Persons who had not replied were visited by a trained enumerator.

Definition of Commercial Orchard: For the purpose of this survey, a commercial orchard is defined as one having one hundred or more fruit trees.

Cooperating Agencies: This survey was planned and conducted through the cooperative efforts of the Montana Agricultural Statistics Service, United States Department of Agriculture and the Montana State Department of Agriculture. Appreciation is expressed to the Montana fruit growers for their cooperation in supplying the necessary detailed information and to the fruit cooperatives and processors and County agents for their assistance.

CHERRY TREES IN COMMERCIAL ORCHARDS

The 1993 survey covered 149 commercial orchards, those with 100 or more fruit trees. These orchards contained 83,690 trees and covered 865 acres. There were 54,032 cherry trees on 594 acres located in Lake and Flathead counties, while in Ravalli county there were 8,543 cherry trees on 114 acres.

Size of Orchard: The average sweet cherry orchard in the 1993 survey contains 385 trees and is 4 acres in size. The 1972 survey showed sweet cherry orchards averaged 455 trees.

ACRES AND TREES IN COMMERCIAL ORCHARDS
By County, 1972 AND 1993

	Acres in Commercial Orchards		Trees of All Ages in Commercial Orchards	
	1972	1993	1972	1993

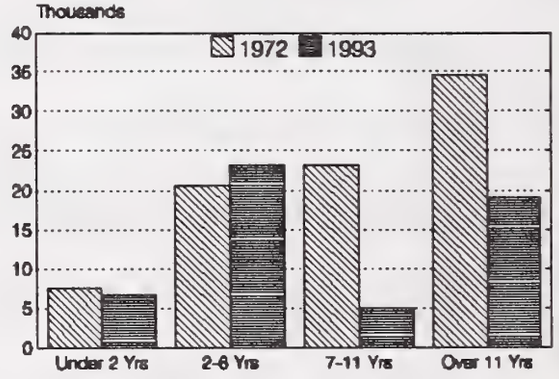
Total Apples	--	158	--	21,115

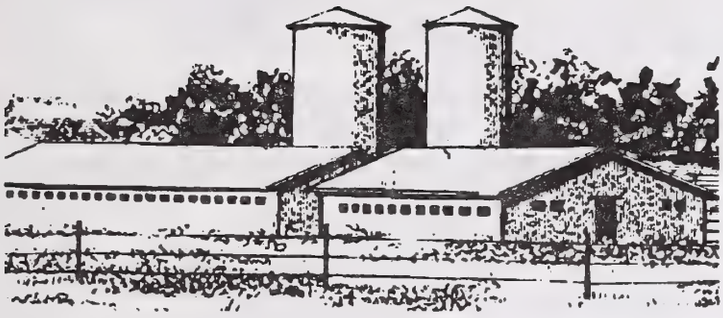
SWEET CHERRY TREES IN COMMERCIAL ORCHARDS
BY AGE AND PERCENT OF TOTAL, 1972 and 1993



APPLES

The 1993 Fruit Tree Survey was targeted more to cherry producers. Grower lists were more readily available for cherry growers although attempts were made to locate apple orchards with 100 or more fruit trees. With the potential for apples to be produced at more widespread locations, the likelihood of missing apple orchards was greater than for cherry orchards.

When interviewers encountered orchards with 100 or more fruit trees information was recorded for all fruits. The survey showed a total of 21,115 apple trees with 18,512 trees being of the dwarf varieties and the remaining 2,603 trees made up of the standard varieties.



NOVEMBER PRICES RECEIVED

Montana crop prices for mid-November were mixed. The price of winter wheat increased 5 cents to $2.97, and durum, at $4.10 rose, 34 cents from October. Other spring wheat averaged $3.55, down 2 cents from the previous month.

All barley was $1.94, up 13 cents from October. Oats averaged $1.20, 25 cents below the previous month. Hay prices dropped between 1 and 2 dollars with alfalfa hay at $69.00 per ton, all other hay at $59.00, and an all hay price of $67.00.

Livestock prices for mid-November were higher than the previous month with the exception of the $1.20 decrease in cow prices to $45.50 per cwt. Calf prices increased 80 cents to $97.20 per cwt. Steers and heifers averaged $85.80 per cwt, up 50 cents from October.

Prices for sheep moved up $1.70 to $24.90 per cwt from last month. Lambs followed with a $2.00 increase to $66.80. Milk prices came in 50 cents higher at $13.40 per cwt.

The U.S. All Farm Products Index of Prices Received in November was 143 based on 1977=100, down 2 points (1.4 percent) from October 1993. Price declines from October for hogs, cattle, oranges, and grapefruit more than offset price gains for corn, tomatoes, soybeans, and milk. Without the orange price change, the All Farm Products Index would have actually gained 2 points to 147. The orange price decline was attributed to increased marketings of Florida processing oranges and the return to more "normal price" levels. U.S. prices for November include all hogs at $43.60 per cwt and eggs at 62.6 cents per dozen.

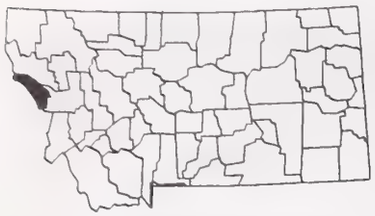
featuring...MINERAL COUNTY



Mineral County is located on the extreme western edge of the state, next to the Idaho line. The Coeur d'Alene Mountains mark its northern boundary, and the Bitterroot Range its western boundary. The Lolo National Forest covers almost the entire county. The Clark Fork River enters the county from the south. Near St. Regis, the river bends to the east and continues out of Mineral County. The St. Regis River begins on the western border and joins the Clark Fork River at its bend near St. Regis.

The 1987 Census of Agriculture lists Mineral County's farm land at 14,517 acres. This is the smallest acreage of any Montana County, and accounts for only 1.9 percent of the total land area in the county. However, winter wheat, spring wheat, and hay were produced in the county. Although the numbers are limited, some cattle and sheep are also raised in the county. Superior is the county seat. The area has an annual average precipitation of 17.46 inches.

Total cash receipts for Mineral county amounted to $734,000 in 1991. Livestock contributed the most at $518,000, while crops added $216,000. If there were government payments in 1991, they amounted to less than $50,000.

OCTOBER RED MEAT PRODUCTION

Montana slaughter plants produced 1.6 million pounds, dressed weight, of red meat during October 1993. This was a 7 percent increase from the previous month and unchanged from a year ago.

The number of cattle slaughtered, at 1,800 head, was the same number slaughtered last year. The average live weight, at 1,216 pounds, increased 59 pounds from last year.

A total of 2,500 hogs were slaughtered in October, the same as a year ago. Average live weight decreased 9 pounds to 230. Sheep and lamb slaughter, at 500 head, was up 100 head from last year. Average live weight, at 119 pounds, decreased 3 pounds.

Commercial red meat production for the **United States** totaled 3.50 billion pounds during October. This production was 4 percent below a year earlier.

Beef production totaled 1.98 billion pounds. This was down 2 percent from October 1992. Head kill totaled 2.80 million, down 2 percent from a year ago. The average live weight increased 7 pounds to 1,187 pounds. Veal production totaled 22.0 million pounds. This was down 8 percent from the previous record low set in October 1992. Calf slaughter totaled 97,400 head, down 15 percent. The average live weight was up 25 pounds to 395 pounds.

Pork production, at 1.47 billion pounds, decreased 7 percent from October 1992. Hog kill totaled 8.04 million head, down 9 percent from a year earlier. The average live weight was up 3 pounds to 254 pounds. Lamb and mutton production, at 25.0 million pounds, fell 14 percent from a year earlier and down 4 percent from the previous record low set in 1979.Slaughter totaled 406,000 head, down 14 percent. The average live weight remained the same at 124 pounds.

January-September red meat production was 33.6 billion pounds, down 1 percent from the comparable period a year earlier. Accumulated beef production decreased 1 percent, veal was down 12 percent, pork was down 2 percent, and lamb and mutton dropped 5 percent.

CATTLE ON FEED UP 6 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for the slaughter market in the 7 States preparing monthly estimates totaled 9.08 million head, up 6 percent from 1992 and 13 percent above 1991. This is the largest November 1 inventory since 1978.

Placements of cattle and calves on feed in the 7 States during October totaled 2.47 million, down 7 percent from last year and 3 percent below 1991. Net placements of 2.40 million for October were down 7 percent from last year and 3 percent below 1991.

Marketings of fed cattle during October totaled 1.54 million, up 3 percent from last year but 8 percent below two years ago. Other disappearance totaled 76,000 head, the same as October 1992 but 1 percent below October 1991.

WAGE RATES UP

U. S. Farm operators paid their hired workers an average wage of $6.26 per hour during the October 1993 survey week. This rate was up 17 cents from a year earlier. Workers paid on an hourly basis earned $5.94 per hour compared with $5.83 in October 1992. Field workers received an average of $5.91 per hour, up 17 cents from the October 1992 survey week. Livestock workers earned $5.67 per hour compared with $5.57 a year earlier.

There were 3.25 million people working on the Nation's farms and ranches during the week of October 10-16, 1993. This is the same as the October 1992 survey week. Self-employed farm operators accounted for 1.54 million of the total, along with 503,000 unpaid workers, and 928,000 workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 283,000 workers.

Benefits, such as housing and meals, were provided to 38 percent of the hired workers during the survey week, compared to 39 percent in October 1992. U. S. annual average wage rates paid by farm operators during 1993 were $6.25 per hour. This compares to $6.06 during 1992 and $5.79 during 1991.

Montana farm operators paid their hired workers an annual average of $5.56 per hour, up 22 cents from 1992. Workers paid on an hourly basis earned $5.82 per hour compared with $5.35 last year. Field workers earned $5.68 which is 24 cents more than earned during 1992. Field and livestock workers received $5.30 per hour compared with $5.13 in 1992.

HIRED WORKERS: Annual Average Wage Rates By State and United States, 1992-1993 1/ 2/

US	6.06	6.25	5.69	5.90	5.64	5.81	5.75	5.95

1/ Excludes agricultural service workers.

2/ Annual rates are averages of the wage rates for each survey week weighted by the number of hours worked during the week. The annual average is based on data collected for January, April, July, and October.

U.S. OCTOBER EGG PRODUCTION ROSE 2 PERCENT

U.S. egg production totaled 6.15 billion eggs during October 1993, up 2 percent from the 6.01 billion eggs produced a year ago. Production included 5.31 billion table eggs, 782 million broiler-type hatching eggs, and 58.0 million egg-type hatching eggs.

The average number of layers during October was 285 million, up 2 percent from the 279 million a year ago. October 1993 egg production averaged 2,156 eggs per 100 layers, compared with 2,151 eggs per 100 layers in October 1992.

All layers in the U.S. on November 1, 1993, totaled 285 million, compared with 280 million a year ago. The 285 million layers consisted of 241 million for table or commercial type eggs, 41.7 for broiler-type hatching eggs, and 2.65 million for egg-type hatching eggs. Rate of lay per day on November 1, 1993, averaged 70.1 eggs per 100 layers, up fractionally from last year's 69.9 eggs per 100 layers.

The 20 major States accounted for about 82 percent of the U.S. egg production and layer numbers during the 3-month period, June through August 1993. Data for the remaining 30 quarterly States were estimated based on the percent change in the 20 States conducting monthly surveys.

OCTOBER MILK PRODUCTION DOWN 1 PERCENT

Milk production in the 21 major States during October totaled 10.4 billion pounds, 1 percent below production in these same States in October 1992. September revised production, at 10.2 billion pounds was down 1 percent from September 1992.

Production per cow in the 21 major States averaged 1,283 pounds for October, 5 pounds above October 1992.

The number of cows on farms in the 21 major States was 8.10 million head, 143,000 below October 1992 and 15,000 below September 1993.

During the July-September period the 21 major States produced 31.7 billion pounds of milk, 84.4 percent of the U.S. production. If the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 12.3 billion pounds for October 1993.

SHEEP AND LAMBS ON FEED

The number of sheep and lambs on feed November 1, 1993 for slaughter market on Montana farms and ranches totaled 39,000 head, up 27,000 head from March 1 and up 8,000 head from January 1. Lambs on feed accounted for 90 percent or 35,000 head of the total November 1 sheep and lambs on feed in the state.

Lambs on feed in feedlots totaled 21,000 head with 9,000 head weighing less than 85 pounds. A total of 14,000 lambs were on pasture and/or crop residue of which 6,000 head weighed 85 pounds or less, of the 8,000 head remaining, less than 500 head weighed more than 105 pounds.

Sheep and lambs on feed November 1, 1993, for slaughter market in the 16 major producing States totaled 1.55 million head. The inventory included 1.47 million lambs (less than 1 year old) for slaughter market and 81,000 mature sheep (over 1 year old).

Of the total lambs on feed, 993,000 (68 percent) were in feedlots and the remaining 475,000 (32 percent) were on pasture and/or crop residue.

Colorado had the most sheep and lambs on feed with 430,000 head, followed by California with 200,000 head, and third was Wyoming with 195,000 head, narrowly surpassing Texas at 187,000.

featuring...MEAGHER COUNTY

Meagher County is situated in central Montana with the Little Belt Mountains marking its northern boundary, and the Big Belt Mountains laying along its western border. Sections of the Lewis & Clark and Helena National Forests are scattered in various regions of the county. The Smith River flows northwesterly through Meagher County, while the Musselshell River originates in the south central region and flows east. White Sulphur Springs is the county seat, and the area has an annual average precipitation of 15.77 inches.

Although a little more than half the terrain is mountainous, agriculture is still a prominent industry. Meagher County ranked 17th and 25th, respectively, among the cattle and sheep producing counties in the January 1, 1993 livestock inventories. December 1, 1992 hog numbers put the county in 21st place. Cash receipts for livestock and products totaled $13,808,000 in 1991 with a rank of 28th.

Most of the cropland is irrigated. Hay, oats, winter and spring wheat, and barley are all grown. Meagher County ranked 12th for all hay production in the 1992 crop production totals, as well as 22nd and 38th for oats and winter wheat, respectively. Crops cash receipts came to $2,038,000 with a rank of 46th in 1991. Government payments added $948,000 for a total cash receipts of $16,794,000.

SEPTEMBER RED MEAT PRODUCTION

Montana slaughter plants produced 1.49 million pounds of red meat during September 1993. This was a 19 percent decrease from the previous month, and 1 percent decrease from a year ago. The number of cattle slaughtered, at 1,600 head, was the same number slaughtered last year. The average live weight, at 1,229 pounds, increased 76 pounds from last year.

A total of 2,600 hogs were slaughtered in September, 100 less than a year ago. Average live weight decreased 7 pounds to 229. Sheep and lamb slaughter, at 400 head, was down 100 head from last year. Average live weight, at 119 pounds, decreased 4 pounds.

Commercial red meat production for the **United States** totaled 3.51 billion pounds during September. This production was 1 percent below a year earlier. Beef production totaled 2.03 billion pounds. This was up 2 percent from September 1992. Head kill totaled 2.87 million, up 2 percent from a year ago. The average live weight increased 2 pounds to 1,185 pounds.

Veal production totaled 22.0 million pounds. This was down 6 percent from the record low set in September 1992. Calf slaughter totaled 97,400 head, down 12 percent. The average live weight was up 21 pounds to 389 pounds.

Pork production, at 1.44 billion pounds, was down 5 percent from September 1992. Hog kill totaled 7.95 million head, down 6 percent from a year earlier. The average live weight was up 1 pound to 252 pounds. Lamb and mutton production, at 27.0 million pounds, was down 10 percent from a year earlier. Slaughter totaled 425,900 head, down 13 percent. The average live weight increased 4 pounds to 126 pounds.

The January-September red meat production was 30.1 billion pounds, down 1 percent from the comparable period a year earlier. Accumulated beef production was down 1 percent, veal was down 12 percent, pork was down 1 percent, and lamb and mutton was down 4 percent.

CATTLE ON FEED UP 9 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed for slaughter market in the 13 States preparing quarterly estimates totaled 9.69 million head, up 9 percent from a year ago and 12 percent above October 1, 1991. This is the largest October cattle on feed inventory since 1978. The inventory included 6.28 million steers and steer calves, 6 percent above a year ago. This group accounts for 64.8 percent of the total inventory. Heifers and heifer calves accounted for 3.36 million head, 15 percent above a year ago.

Placements of cattle and calves on feed in the 13 States during the July-September 1993 quarter totaled 6.30 million, up 3 percent from last year and 16 percent above July-September 1991. Net placements of 6.03 million for July-September were up 3 percent from last year and up 18 percent from 1991.

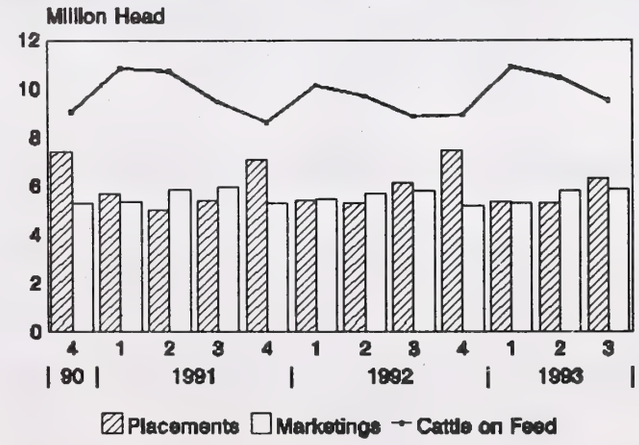
Marketings of fed cattle during the July-September 1993 quarter totaled 5.83 million, up 1 percent from last year but 2 percent below two years ago. Other disappearance totaled 270,000 head compared to 268,000 in July-September 1992 and 282,000 in July-September 1991.

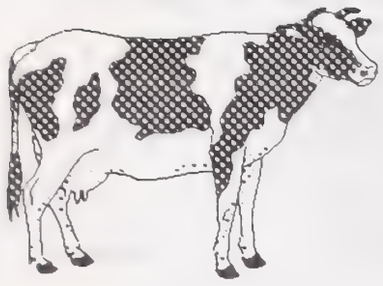
Expected Marketings for October-December 1993 Up 7 Percent

Cattle feeders expect to market 5.56 million head during the October-December quarter of 1993. This would be up 7 percent from the fourth quarter marketings in 1992 and up 6 percent from October-December of 1991.

CATTLE ON FEED, PLACEMENTS, MARKETINGS BY QUARTERS FOR 13 STATES

(AZ, CA, CO, ID, IA, KS,MN, NE OK, SD, TX WA)





SEPTEMBER MILK PRODUCTION DOWN 1 PERCENT

Milk production in the 21 major States during September totaled 10.1 billion pounds, 1 percent below production in these same States in September 1992. August revised production, at 10.6 billion pounds, was down 1 percent from August 1992.

Production per cow in the 21 major States averaged 1,250 pounds for September, 4 pounds above September 1992. The number of cows on farms in the 21 major States was 8.11 million head, 125,000 below September 1992 and 8,000 below August 1993.

During the July-September period the 21 major States produced 31.7 billion pounds of milk, 84.4 percent of the U.S. production. If the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 13.0 billion pounds for July, 12.5 billion pounds for August, and 12.0 billion pounds for September.

The quarterly production of milk for the U.S. was 37.5 billion, slightly below the July-September period last year. The average number of milk cows in the U.S. during the July-September quarter was 9.71 million head, 116,000 less than the same period last year.

Grain and other concentrates fed to milk cows on October 1, 1993, averaged 17.8 pounds per cow, 0.4 pound more than October 1, 1992. The value of grain and other concentrates fed to cows on October 1, averaged $7.92 per hundredweight, $0.27 more than October 1, 1992.

SEPTEMBER EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 5.87 billion during September 1993, up 2 percent from the 5.75 billion produced a year ago. Production included 5.06 billion table eggs, 755 million broiler-type hatching eggs, and 55.0 million egg-type hatching eggs. The total number of layers during September 1993 averaged 283 million, up 2 percent from the 276 million a year ago. September 1993 average egg production was 2,072 eggs per 100 layers, compared with 2,080 eggs per 100 layers in September 1992.

All layers in the U.S. on October 1, 1993, totaled 285 million, compared with 279 million a year ago. The 285 million layers consisted of 240 million for table or commercial type eggs, 42.4 million for broiler-type hatching type eggs, and 2.65 million for egg-type hatching eggs. Rate of lay per day on October 1, 1993, averaged 68.9 eggs per 100 layers, up fractionally from the 68.8 eggs per 100 layers on October 1, 1992.

Laying flocks in the 20 major egg production States produced 4.81 billion eggs during September 1993, up 2 percent from the 4.71 billion produced a year ago. The number of layers during September averaged 232 million, up 3 percent from the 226 million a year ago.

Data for the 30 quarterly States were estimated based on the percent change in the 20 States making monthly surveys. These monthly States accounted for about 82 percent of the U.S. egg production and layer numbers during the 3-month period, June 1993 through August 1993.

INDUSTRY USING MORE AG PRODUCTS

Industrial products made from agricultural materials are gaining a foothold in consumer markets. Government environmental regulations and growing consumer preference for "green" products are expanding industrial demand for agricultural materials. Products showing signs of success include ethanol, starch-based adhesives and biodegradable polymers, soy-oil inks, biodiesel fuel, erosion-control products, and kenaf-based packing materials and animal litter.

Recent scientific advances are reducing the costs of processing farm products for use as industrial raw materials. And advances in process engineering are making farm-based products more competitive with synthetic materials.

Over the next 4 years, increased demand for fuel ethanol, adhesives, and biodegradable polymers will expand industrial use of starches and sugars. Cornstarch, which is currently less expensive than starch from other sources, has captured most of the industrial starch market. Industrial demand for starch, in corn-equivalent units, is expected to reach 795 million bushels by market-year 1995/96 (September-August), up 140 million from 1992/93, about an 8-percent annual rise.

Starch dominates the natural adhesives market. Currently, about 3.5 billion pounds of starch, mostly corn, is used annually to make adhesives, primarily for the paper and paperboard industry.

While most of the starch is from corn, starch from wheat and potatoes is also used to make adhesives.

LIVESTOCK: Inventory by Counties, January 1, 1991-1993

featuring...MADISON COUNTY

Madison County was created in February of 1865. It occupies approximately 2,297,452 acres in southwestern Montana. Surrounded and divided by mountain ranges, Madison County is comprised of two parallel valleys--the Madison and the Ruby. Portions of the Beaverhead National Forest lie within the boundaries of the county. Flowing from south to north is the Madison River in the eastern part of the county, and the Ruby River in the western half. The Ruby joins the Beaverhead River near Twin Bridges, Montana, which then joins the Jefferson River and continues on out of the county. The Ruby River Reservoir is located on the Ruby River near Alder, Montana.

Madison County lends itself to abundant livestock production and ranked 5th and 9th, consecutively, in cattle and sheep numbers on January 1, 1993. In the December 1, 1992 hog inventory, Madison County showed up in 27th place. Hay production is a major agricultural interest in the county as it ranked 2nd in 1992 production of that crop. Spring and winter wheat, barley, and oats are also produced in the area.

The thriving livestock industry brought Madison County $26,243,000 in cash receipts and a ranking of 9th in 1991. Crops contributed $4,650,000, ranking 34th, while government payments added $1,378,000 for a total return of $32,271,000 in 1991 and a rank of 27th in the state.

OCTOBER 1 CROP PRODUCTION

Montana's 1993 **all wheat** crop of 196.8 million bushels is a new record high, topping the record established in 1982 by 9 percent and last year's output by 41 percent. Some of this year's bountiful crop still remains to be harvested because producers were waiting for warm dry weather to mature the crop and drop moisture levels. Most of the crops would normally be in the bin by now, but many producers providing information on our most recent survey estimated a portion of their production. These producers will be re-contacted in early November to obtain actual production.

Winter wheat production is 102.9 million bushels compared with 60.9 million last year. There were 2.45 million acres harvested with an average yield of 42 bushels, 2 bushels above the record 1991 yield. There were 2.65 million acres of **spring wheat** harvested, not including durum, producing 90.1 million bushels, exceeding the 1982 record of 89.9 million bushels and up 23 percent from last year's crop. Production of **durum wheat** is placed at 3.8 million bushels, down from 5.2 million last year.

Barley production is 65.6 million bushels, up from 52.8 million produced in 1992. Barley harvested acres of 1.15 million is down 50 thousand from last year, but the yield of 57 bushels per acre is a new record, 5 bushels above the 1991 record. **Oats** producers also had a record yield of 66 bushels per acre, topping the 1992 record of 56. There were 4.0 million bushels of oats produced from 60,000 acres harvested.

The wet 1993 crop season produced a record **all hay** crop of 5.5 million tons, but made it very difficult for hay harvesting. **Alfalfa hay** production is estimated at 4.1 million tons, 23 percent larger than last season and 8 percent larger than the record set in 1991. **All other hay** production is expected to be 1.4 million tons, 6 percent larger than last year. **Sugar beet** production is estimated to be 1.2 million tons, down 6 percent from last season. Growers expect to harvest 54,100 acres, 1,700 less than in 1992.

U.S. **all wheat** production for 1993 totaled 2.42 billion bushels, down 3 percent from September 1 and down 2 percent from 1992. The U.S. yield averaged 38.4 bushels per acre, off 0.6 bushel from the last forecast and a full bushel less than 1992. The 1993 **winter wheat** production was estimated at 1.77 billion bushels, up 10 percent from 1992. Yields averaged 40.3 bushels per acre, 2.0 bushels better than last year. Production of **other spring wheat** was estimated at 579 million bushels, down 23 percent from last year. **Durum** production was estimated at 73.2 million bushels, 25 percent less than the 1992 crop.

Barley production was estimated at 416 million bushels, 9 percent below last year's crop of 458 million bushels. Average yield per acre, at 58.9 bushels, was down 3.6 bushels from the 1992 crop. The area harvested for grain was estimated at 7.06 million acres, 4 percent less than last year. This is the smallest harvested barley acreage since 1934. **Oats** production in 1993 was estimated at 208 million bushels, 29 percent below last year's crop of 295 million bushels, and the lowest production since estimates were first made in 1866.

Corn to be harvested for grain is estimated at 63.1 million acres, down 13 percent from last year. The acreage is down 1 percent from the 63.9 million acres estimated last month. **Alfalfa hay** production is forecast at 84.0 million tons, 5 percent above a year ago. Production of **all other hay** is expected to total 70.0 million tons, 1 percent above last year. Production of **dry beans** is forecast at 23.1 million cwt, 5 percent above last year. The October 1 **sugar beet** production forecast of 27.8 million tons is 4 percent below last year's output.

OCTOBER 1 PASTURE & RANGE FEED CONDITION

Montana pasture and range feed conditions were rated 101 percent of normal on October 1, 1993. This condition was the best since the 1927 record of 109 percent. Compared with last year, the pasture and range feed condition is up 21 points. The north central district, recovering from last year's drought conditions, moved up 43 points. The southeast district is down 4 points from 1992. All other districts are above last year.

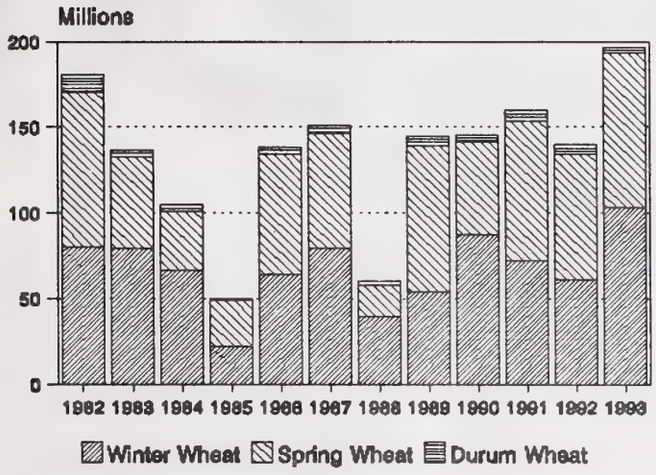
Montana Wheat Production
(October 1 numbers for 1993)



SEPTEMBER AGRICULTURAL PRICES

Montana farm and ranch prices increased in September over August for all wheat, hay, steers and heifers, and lambs.

Individual commodity prices show all wheat at $3.37, up 4 cents per bushel from August. Barley was $1.82 per bushel, down 45 cents from the previous month. Oats, at $1.03 per bushel, were 13 cents below last month's price. Hay prices rose between 2 and 3 dollars per ton. Alfalfa hay came in at $72.00 and other hay is currently averaging $61.00 a ton.

Livestock prices for mid-September had steers and heifers gain 90 cents over last month to $82.00 per cwt. Cow prices dropped $1.90 to $49.80, and the average price for calves decreased $5.60 to $98.40 per cwt. Prices received for sheep also fell $5.60 per cwt from last month to $24.70, but lamb prices rose $2.50 to $68.20. Milk prices remained the same at $13.60 per cwt.

The **U.S.** September All Farm Products Index of Prices Received was 145 based on 1977=100, up 3 points (2.1 percent) from August 1993. Price gains from August for oranges, lettuce, wheat, and apples more than offset price declines for soybeans, eggs, cattle, and corn. Most of the index change was attributed to a 93 percent increase in orange prices. Without the large change in orange prices from August to September, the All Farm Products Index would have been unchanged at 142. The orange price change tends to be over represented in the index since volume marketed was small. U.S. prices for September include all hogs at $48.20 per cwt and eggs at 56 cents per dozen.

Compared with September 1992, the All Farm Products Index was 6 points (4.3 percent) higher. Price increases from September 1992 for hogs, oranges, soybeans, and broilers more than offset price decreases for milk, wheat, apples, and tobacco.

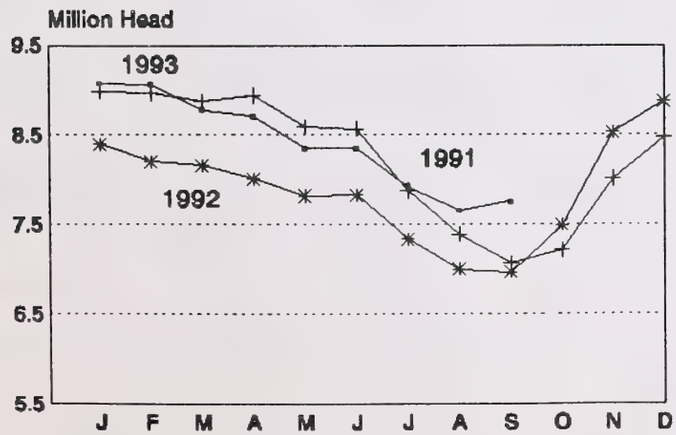
CATTLE ON FEED UP 11 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for the slaughter market in the 7 States preparing monthly estimates totaled 7.75 million head, up 11 percent from a year ago and 1 percent above the previous month. This is the largest September 1 inventory since 1978.

Placements of cattle and calves on feed in the 7 States during August totaled 1.85 million, up 12 percent from last year and 26 percent above 1991. This is the largest August placements since 1987. Net placements of 1.77 million for August were up 13 percent from last year and 27 percent above 1991.

Marketings of fed cattle during August totaled 1.67 million, up 5 percent from last year, but 3 percent below two years ago. Other disappearance totaled 77,000 head compared to 81,000 in August 1992 and 67,000 in August 1991.

CATTLE ON FEED
7 STATES
(AZ, CA, CO, IA, KS, NE, TX)



AUGUST 1993 RED MEAT PRODUCTION

Montana slaughter plants produced 1.83 million pounds of red meat in August 1993. This was a 19 percent increase from July, and a 7 percent increase from a year ago. The number of cattle slaughtered, at 1,800 head, increased 100 head from last year. Average live weight increased 15 pounds to 1,239.

A total of 3,600 hogs were slaughtered in August, 500 head more than were slaughtered during this time in 1992. Average live weight decreased 13 pounds to 226. Sheep and lamb slaughter, at 700 head, increased 100 head from last year. Average live weight decreased 12 pounds to 111.

Commercial red meat production for the United States totaled 3.5 billion pounds during August. This production was 3 percent above a year earlier.

Beef production totaled 2.07 billion pounds, up 4 percent from August 1992. Head kill totaled 2.94 million, an increase of 6 percent from a year ago. The average live weight decreased 5 pounds to 1,173 pounds.

Veal production totaled 23.0 million pounds. This was down 4 percent from the record low set in August 1992. Calf slaughter totaled 98,400 head, down 11 percent. The average live weight was up 29 pounds to 400 pounds.

Pork production, at 1.39 billion pounds, was up 1 percent from the record high set a year earlier. Hog kill totaled 7.64 million head, down 1 percent from a year earlier. The average live weight was up 2 pounds to 251 pounds.

Lamb and mutton production, at 27.0 million pounds, was up 6 percent from a year earlier. Slaughter totaled 431,900 head, up 3 percent. The average live weight increased 3 pounds to 125 pounds.

January-August red meat production was 26.5 billion pounds, down 1 percent from the comparable period a year earlier. Accumulated beef production was down 1 percent, veal was down 13 percent, pork was down slightly, and lamb and mutton was down 3 percent.

SEPTEMBER 1, 1993 GRAIN STOCKS

Montana wheat stocks on September 1, 1993 amounted to 219 million bushels, 46 percent more than last year. This year's September inventory is the largest since 1982, and is 30 percent above the 10-year average. Because of the late harvest season, some of the winter wheat stocks and much of the spring wheat were still in the field.

Winter wheat stocks, at 100 million bushels, were 49 percent above a year ago, and all spring wheat, at 119 million, was up 44 percent. All wheat on farms increased 46 percent from last year and off-farm stocks rose 48 percent. All wheat disappearance in the June through August quarter was 21 percent less than the 10-year average--probably because of the late harvest season.

Barley stocks, in all locations on September 1, amounted to 62.7 million bushels, up 34 percent from last September. Barley on the farm was up 54 percent from last year. Off-farm inventory was down 65 percent. Oat stocks, at 4.7 million bushels, are down 7 percent from last year. Oat stocks on the farm were 2 percent above last year.

U.S. all wheat stored in all positions on September 1, 1993, is placed at 2.16 billion bushels, up 2 percent from last September 1. Farm stocks are 1.0 billion bushels and off-farm stocks total 1.15 billion. Both are up 2 percent from a year ago.

Durum wheat stocks in all positions total 110 million bushels, down 1 percent from last September. Farm stocks, at 89.0 million bushels, are off 2 percent from a year ago. Stocks in off-farm storage total 21.1 million bushels, up 1 percent.

Old crop corn stored in all positions on September 1, 1993 is estimated at 2.11 billion bushels, up 92 percent from September 1, 1992.

Barley stored in all positions on September 1, 1993 is estimated at 409 million bushels, 2 percent below the stocks of September 1, 1992. Of the total barley stocks on hand, 285 million bushels are stored on farms, 9 percent above a year earlier. Off-farm stocks, at 124 million bushels, are 21 percent below last year.

Oats stored in all positions on September 1, 1993 are 221 million bushels, 25 percent below a year earlier. Of the total oat stocks on hand, 163 million bushels are stored on farms, 18 percent below last year. Off-farm stocks totaled 57.9 million bushels, 39 percent below last year.

U.S. HOG INVENTORY DOWN 4 PERCENT

U.S. inventory of all hogs and pigs on September 1, 1993, is estimated at 59.0 million head. This is a 4 percent decrease from last year and 1 percent below September 1, 1991.

Breeding inventory, at 7.08 million head, was down 5 percent from a year ago and 3 percent below September 1, 1991. Market hog inventory, at 51.9 million head, decreased 4 percent from a year ago and was down 1 percent from September 1, 1991.

The June-August 1993 U.S. pig crop was 23.7 million head, 8 percent less than last year and down 3 percent from the same period in 1991. Sows farrowing during this period totaled 2.93 million head, down 7 percent from last year and 6 percent below 1991. Pigs saved per litter were 8.09 compared to 8.14 during the same period in 1992.

U.S. hog producers intend to have 2.93 million sows farrow during the September-November quarter, 3 percent less than the actual farrowings during the same period last year and 1 percent less than in 1991. Farrowings intended for December 1993-February 1994, at 2.85 million sows, are 2 percent above 1993, but down 2 percent from 1992.

The Montana grain stocks and U.S. hogs and pigs estimates in this issue of the Reporter are the result of surveying approximately 1,800 Montana farmers and ranchers during September. Names were selected on a statistical probability basis. SPECIAL THANKS to those operators that were interviewed and responded to this survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

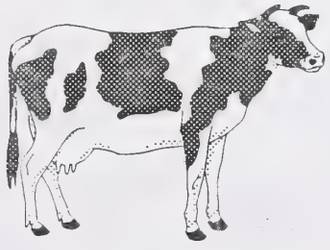
QUARTERLY EGG PRODUCTION

During the June--August quarter of 1993, Montana layers produced 28 million eggs, down from 41 million produced last year. Layers during the quarter averaged 405,000 compared with 610,000 in 1992.

The Nation's laying flocks produced 17.8 billion eggs during the June--August quarter, up 2 percent from the corresponding quarter a year ago. Production included 15.2 billion for table eggs, 2.36 billion for broiler-type hatching, eggs and 183 million egg-type hatching eggs. Layers for the quarter averaged 281 million, up 2 percent from the 275 million a year ago.

U.S. egg production totaled 6.0 billion during August 1993, 1 percent above a year ago. Production included 5.16 billion table eggs, 779 million broiler-type hatching eggs, and 58.0 million egg-type hatching eggs. The total number of layers during August averaged 281 million, up 3 percent from a year ago.

August egg production per 100 layers was 2,131 eggs, compared with 2,155 in August 1992. All layers in the U.S. on September 1, 1993, totaled 281 million, up 3 percent from a year ago. The 281 million layers consisted of 237 million layers producing table or commercial type eggs, 42.2 million layers producing broiler-type hatching type eggs, and 2.58 million layers producing egg-type hatching eggs. Rate of lay per day on September 1, 1993, averaged 69.1 eggs per 100 layers, compared with 69.7 eggs per 100 layers on September 1, 1992.



AUGUST MILK PRODUCTION DOWN SLIGHTLY

Milk production in the 21 major States during August totaled 10.7 billion pounds, slightly below production in these same States in August 1992. July revised production, at 10.9 billion pounds was up slightly from July 1992. If the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 12.6 billion pounds for August 1993.

Production per cow in the 21 major States averaged 1,309 pounds for August, 14 pounds above August 1992. The number of cows on farms in the 21 major States was 8.14 million head, 104,000 below August 1992 and 5,000 below July 1993.

During the April-June period, the 21 major States produced 33.4 billion pounds of milk, 84.4 percent of the U.S. production.

MONTANA VALUE OF PRODUCTION UP 23 PERCENT

Montana's 1992 potato production totalled 2.47 million cwt, 12 percent below a year earlier and 1 percent below 1990. Montana farmers harvested 8,500 acres this year, down 800 acres from last year and down 400 acres from 1990. Yield per acre dropped 10 cwt from 1991 to 290 cwt per acre.

Value of production from the 1992 crop amounted to 20.7 million dollars, 23 percent higher than a year earlier. The average price was $8.40 per cwt, an increase of $2.70 over the 1991 crop.

Sales of Montana's 1992 potato crop totalled 18.8 million dollars, a 27 percent increase from the 1991 crop. Producers sold 2.24 million cwt from the 1992 crop compared with 2.4 million cwt from the 1991 crop.

Total 1992 potato production in the U.S., at 425 million cwt, was 2 percent above a year earlier and 6 percent above 1990. Harvested area, at 1.32 million acres, was down 4 percent from previous year. Yield averaged 323 cwt per acre, a 19 cwt increase. Yield per acre and production were both record highs.

Value of production from the 1992 crop was $2.34 billion--14 percent more than a year earlier, but 4 percent below 1990. The average price was $5.52 per cwt compared with $4.96 for the 1991 crop.

Sales from the 1992 potato crop totalled 386 million cwt, up 2 percent from 1991 and 5 percent above 1990. Non-sales accounted for 39.7 million cwt of 1992 potatoes, up 3 percent from the previous year and 16 percent greater than 1990. In the 1992 season, farmers sold 90.7 percent of their crop and kept 9.3 percent. Shrinkage and loss were estimated at 33.8 million cwt, 4 percent greater than the previous season and 19 percent above 1990 losses. Livestock feed and home use totalled 1.18 million cwt, up 17 percent. Growers kept 4.75 million cwt for seed on their own farms, down 6 percent from the previous year.

Processors used a record high 229 million cwt of potatoes, up 1 percent from 1991 and 3 percent above the 1990 usage. Table stock totalled 127 million cwt, a fractional gain from last year, while other sales (diversion, seed, and livestock feed) of 29.4 million cwt were up 14 percent.

Chip potato use, at 48.5 million cwt, was up 6 percent from a year earlier. Frozen potatoes totalled 136 million cwt--gaining 1 percent, while dehydrated claimed 38.1 million cwt--a decrease of 6 percent. Canning use totalled 5.27 million cwt, up 21 percent. Starch, flour, and other products were made from 1.61 million cwt of potatoes, a drop of 7 percent. A diversion program purchased slightly over 2 million cwt of potatoes, mostly out of Maine.

SEPTEMBER 1993 CROP PRODUCTION

Montana's September 1 spring wheat production forecast at 85.8 million bushels, is 17 percent more than last year. Only 1 other year, 1982, exceeded that level. Yield per acre is expected to be 33 bushels, 1 bushel below the record 1991 yield. Cool, wet weather that produced the bumper crop delayed harvest and as of September 1 only 5 percent of the acreage had been harvested. Durum wheat production is expected to be 3.6 million bushels, 30 percent less than last year. The most recent winter wheat forecast, August 1, placed production at the third largest crop, 97.5 million bushels, 60 percent more than last year. Therefore, Montana's 1993 all wheat crop is forecast to be 186.9 million bushels. This would be nearly 4 percent above the previous record produced in 1982 and would be 34 percent above last year's production.

Barley production, forecast at 67.2 million bushels, is unchanged from last month's forecast and 27 percent above last year. Yield per acre, at 56 bushels, is 4 bushels above the 1991 record.

The sugar beet production forecast was unchanged from last month, but is 6 percent below last year at 1.2 million tons.

Montana pasture and range feed condition was 99 percent of normal compared with 78 last year at this date.

U.S. all wheat production is forecast at 2.49 billion bushels, down 2 percent from August 1, but 1 percent higher than the 1992 production. The U.S. yield is expected to average 39.0 bushels per acre, off 1.0 bushel from last month and 0.4 bushel less than last year. Area for grain is 63.9 million acres, unchanged from August 1.

The other spring wheat production forecast is 628 million bushels, down 8 percent from August 1 and 17 percent less than 1992. Yields are expected to average 35.7 bushels per acre, 3.3 bushels less than a month ago as diseases in the Red River Valley have sharply lowered Minnesota's yield expectations and hurt North Dakota's. Wetness has also fostered disease problems in South Dakota. Montana's prospects improved during August as did Washington's. Area for grain is unchanged from last month at 17.6 million acres. Harvest has progressed slowly in the major producing States, though South Dakota's harvest is ahead of last year.

Corn production is forecast at 7.23 billion bushels, down 3 percent from the August 1 forecast and 24 percent below the record high production of 1992. Based on conditions as of September 1, yields are expected to average 113.1 bushels per acre, down 2.9 bushels from last month and 18.3 bushels below the record yield of 131.4 bushels set a year earlier. Acreage for harvest as grain is estimated at 63.9 million acres, down slightly from last month.

Soybean production is forecast at 1.91 billion bushels as of September 1, virtually unchanged from the August 1 forecast, but 13 percent below 1992. If realized, this would be the lowest production since 1988.

PASTURE AND RANGE FEED CONDITION

Montana pasture and range feed conditions were rated 99 percent of normal on September 1 1993. This condition tied the previous recent record set in 1975 but was below the 1927 record of 110 percent. Compared with last year the pasture and range feed condition is up 21 points. The North Central district, recovering last year's drought conditions, moved up 45 points. The south central district is down 3 points from 1992. All other districts are above last year.

AUGUST PRICES RECEIVED

Montana crop prices for mid-August showed mixed changes. Winter wheat was down 32 cents to $2.76. Other spring wheat increased 38 cents to $3.92, and durum, at $3.00, went up a penny from July. All barley, at $1.68, dropped 18 cents from July. Oats, at $1.14, averaged 36 cents below the previous month. Alfalfa hay remained unchanged at $70.00 per ton, but other hay prices, at $58.00 per ton, decreased $4.00 from July, and all hay dropped $1.00 to $68.00.

Livestock prices for mid-August were higher compared with the previous month, except for sheep. Cow prices rose $1.10 to $53.60 per cwt, and the average price for steers and heifers increased $1.90 to $82.10 per cwt. Calf prices, at $95.20, rose $1.50 from the previous month. Milk prices decreased 60 cents to $13.30 per cwt. Prices received for sheep fell $1.70 per cwt from last month to $29.00, but lamb prices enjoyed a $5.40 jump to $57.80.

The United States All Farm Products Index of Prices Received in August was 142 based on 1977=100, up 2 points (1.4 percent) from July 1993. Price gains from July for oranges, lemons, grapefruit, and apples more than offset price declines for potatoes, milk, lettuce, and soybeans. U.S. prices for August include all hogs at $47.10 per cwt and eggs at 61 cents per dozen.

Compared with August 1992, the All Farm Products Index was 3 points (2.2 percent) higher. Price increases from August 1992 for hogs, cattle, soybeans, and oranges more than offset price decreases for milk, apples, lettuce, and strawberries.

WHEAT & BARLEY MOVEMENT

Montana wheat shipped to out-of-state destinations in December 1992-May 1993, at 68.0 million bushels, was 23 percent below the same period last year. The largest amount ever recorded by the Grain Movement survey, which dates back to 1972, was recorded last year at 88.2 million bushels.

Shipments to eastern destinations totaled .7 million bushels, 48 percent below last year. Movement to the west was down 23 percent, at 66.3 million bushels. Other destinations, mostly south and southeast of Montana, received 1.1 million bushels—135 percent above last year. Rail movement amounted to 63.9 million bushels—94 percent of total shipments.

Montana barley shipped to out-of-state destinations December 1992—May 1993, was 14.4 million bushels, down 41 percent from same period last year. Shipments to western destinations were down 44 percent and eastern destinations were down 20 percent. Barley hauled by rail was 92 percent of total movement, down from 95 percent for the same period last year.

AUGUST 1993 CROP PRODUCTION

Cereal grain development is much later than usual but if normal late summer and early fall weather prevails the cereal grain harvest will be the largest since 1982. Montana's 1993 wheat crop is forecast to be 184.2 million bushels based on August 1 conditions. This would be the largest crop ever harvested if current expectations materialize, and would be 32 percent above last year's production.

Winter wheat harvest had not begun by August 1, but is expected to turn out a near record 97.5 million bushels, 60 percent more than last year. Yield per acre, forecast at 39 bushels, is one bushel below the 1991 record.

Durum wheat production is expected to be 3.5 million bushels, 32 percent less than last year. Other spring wheat production is forecast at 83.2 million bushels, 13 percent more than last year. Only 2 other years, 1989 and 1982, exceeded that level. Yield per acre is expected to be 32 bushels, 2 bushels below the record 1991 yield.

Barley production, forecast at 67.2 million bushels, is 27 percent above last year. Yield per acre, at 56 bushels, is 4 bushels above the 1991 record. Oats production is expected to establish a new record yield of 65 bushels per acre, 9 bushels above the 1992 yield. Production is forecast at 3.9 million bushels, slightly below the 1992 production.

Corn harvested for grain is forecast at 2.4 million bushels, 12 percent below last year's production. Dry bean production is expected to exceed 1992 production by 26 percent with a production total of 228,000 hundred weight. Sugar beet production is forecast 6 percent below last year at 1.2 million tons.

Hay production is forecast at 5.3 million tons, 15 percent more than last year. Alfalfa, at 3.9 million tons, is 19 percent above 1992. Other hay is expected to be 6 percent above 1992 at 1.4 million tons. Montana pasture and range feed condition was 102 percent of normal compared with 85 last year at this date.

U.S. wheat production is forecast at 2.56 billion bushels, down 2 percent from July 1, but up 4 percent from 1992. Yields are now expected to average 40.0 bushels per acre, a record high but off 0.5 bushels from July 1. Winter wheat final 1993 production forecast is 1.79 billion bushels, off 2 percent from the July 1 forecast, but 11 percent more than in 1992. Yields are 40.5 bushels per acre, down a half bushel from last month. Other spring wheat production is forecast at 687 million bushels, down 2 percent from July 1 and off 9 percent from 1992's record high. Yields are forecast at 39.0 bushels per acre, down 0.4 bushel from last month.

Total barley production is forecast at 467 million bushels, up 1 percent from last month and 2 percent above the 1992 crop. The expected yield per acre is forecast at 61.9 bushels, up 0.6 bushels from July, but 0.5 bushels below last year. Corn production is forecast at 7.42 billion bushels, down 22 percent from the record high production of 1992. Based on August 1 conditions, yields are expected to average 116.0 bushels per acre, down 15.4 bushels from the record high yield of last year.

AUGUST 1 PASTURE AND RANGE FEED CONDITION SHOWS MOST AREAS IMPROVED FROM LAST YEAR

Montana pasture and range feed condition for August 1, 1993, was 102 percent of normal, 18 points above July 1, and 17 points above last year at this same date. Cool weather retarded this year's growth in some areas, but more favorable soil moisture has brought good growth, especially to the north central district which is recovering from last year's drought. The north central district shows a 43 point improvement over year-ago condition, while all other areas show an improvement to a lesser degree, except the southwest and south central districts which were unchanged from last year.

[1] District data funded by the Montana Wheat & Barley Committee. [2] Preliminary.

JULY PRICES RECEIVED

The average price received for wheat by **Montana** farmers at mid-July was $3.38, up 15 cents per bushel from June, but down 16 cents from July a year ago. The mid-July barley price, at $2.02, was up 3 cents per bushel from June and down 45 cents from July 1992.

Oats, at $1.28, was down 10 cents per bushel from June and down 1 cent from a year earlier. Alfalfa hay, at $70.00 a ton, down $2.00 per ton from June and down $4.00 a ton from July 1992.

Cow prices, at $51.70 per cwt, were down $1.00 per cwt from June, but up $2.80 from July a year ago. Prices for steers and heifers, at $83.00 per cwt, were down 60 cents from June, but up $9.60 from a year earlier. Calves, at $97.80 per cwt, were down 20 cents from June, but up $7.30 per cwt from July 1992.

Sheep, at $30.50 per cwt, were up $1.00 per cwt from June and up $9.40 from July a year ago, while lambs, at $56.10 per cwt, were up $1.10 from June, but down $1.40 per cwt from July a year ago.

The U.S. all farm products index of prices received in July was 140 based on 1977=100, unchanged from June 1993. Price gains from June for potatoes, soybeans, lettuce, and corn offset price declines for cattle, hogs, eggs, and wheat.

Compared with a year earlier, the July all farm products index was 2 points (1.4 percent) higher. Price increases from July 1992 for cattle, soybeans, oranges, and lettuce more than offset price decreases for wheat, corn, apples, and grapefruit.

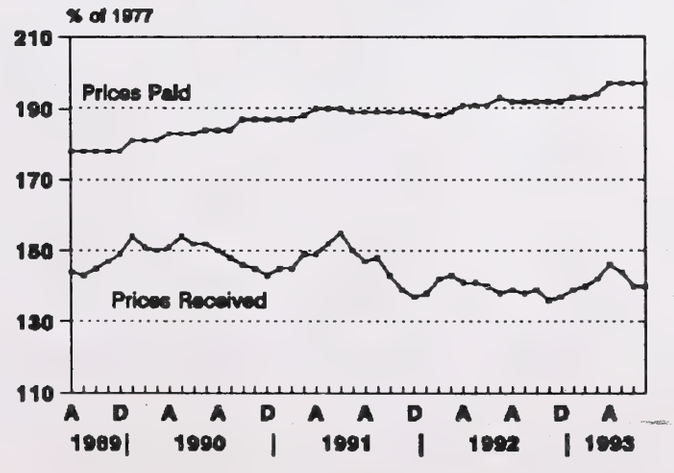
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



MONTANA FARM NUMBERS DECREASE

The number of farms and ranches in Montana in 1993 is estimated at 24,500, down 100 from last year. Land in farms and ranches totaled 59.9 million acres, 100,000 less than in 1992.

Farm numbers and land in farms in the United States also continue to decline. The number of farms in 1993 is estimated at 2.068 million, down 1 percent from 1992. Total land in farms is 978 million acres, down 1.8 million acres from last year. The rate of decline in number of farms followed the historical trend while the land in farms declined marginally. The average farm size increased from 468 acres in 1992 to 473 in 1993.

Texas remains the state with the most farms, at 185,000, up 2,000 from a year earlier. Missouri is second with 106,000 farms--down 1,000 from last year, followed by Iowa with 100,000 farms--down 2,000 from 1992. California experienced the largest decrease in farm numbers, down 4,000 from the previous year. Four states showed increases in numbers of farms: Alabama, Mississippi, Texas, and Wyoming which rose to 47,000, 39,000, 185,000, and 9,300, respectively. Fifteen states remained the same as a year ago, and the other thirty-one states showed a decline from last year.

JULY 1 CATTLE INVENTORY UP 1 PERCENT

All cattle and calves in the United States as of July 1, 1993, totaled 110.6 million head, up 1 percent from July 1, 1992, and up 1 percent from the 109 million two years ago.

All cows and heifers that have calved, at 45.2 million, were up 2 percent from the previous two years.

-- Beef cows, at 35.4 million, were 2 percent above July 1, 1992, and 3 percent above two years ago.

-- Milk cows, at 9.80 million, were 1 percent below July 1, 1992, and 2 percent below 1991.

Other class estimates on July 1, 1993, and the changes from July 1 last year and two years ago, respectively, are as follows:

-- All heifers 500 pounds and over, 17.2 million, up 1 percent and up 2 percent.

-- Beef replacement heifers, 5.80 million, up 2 percent and up 9 percent.

-- Milk replacement heifers, 4.10 million, down 2 percent from the previous two years.

-- Other heifers, 7.30 million, up 3 percent but down 1 percent.

-- Steers weighing 500 pounds and over, 15.2 million, up 1 percent from the previous two years.

-- Bulls weighing 500 pounds and over, 2.20 million, unchanged from the previous two years.

-- Calves under 500 pounds, 30.8 million, up 1 percent from both 1992 and 1991.

CALF CROP UP 2 PERCENT

The 1993 calf crop is expected to be 40.1 million, up 2 percent from 1992 and 3 percent above 1991. Calves born during the first half of the year are estimated at 29.0 million, up 1 percent from 1992 and 1991.

CATTLE AND CALVES: NUMBER BY CLASS AND CALF CROP, UNITED STATES, JULY 1, 1991-93

Class	1991	1992	1993	1993 as % 1992
		1,000 Head		Percent
Cattle and Calves	109,000	109,200	110,600	101
Cows and Heifers That Have Calved	44,400	44,400	45,200	102
Beef Cows	34,400	34,550	35,400	102
Milk Cows	10,000	9,850	9,800	99
Heifers 500 Pounds and Over	16,900	17,000	17,200	101
For Beef Cow Replacement	5,300	5,700	5,800	102
For Milk Cow Replacement	4,200	4,200	4,100	98
Other Heifers	7,400	7,100	7,300	103
Steers 500 Pounds and Over	15,100	15,100	15,200	101
Bulls 500 Pounds and Over	2,200	2,200	2,200	100
Calves Under 500 Pounds	30,400	30,500	30,800	101
Calf Crop 1/	39,026	39,335	40,100	102

1/ For the current year, the calf crop is the number of calves born before July 1 plus the number expected to be born on and after July 1.

MONTANA WHEAT & BARLEY VARIETIES

Montana's wheat and barley varieties report was made possible with funds provided by the Montana Wheat & Barley Committee and the American Malting Barley Association, Inc. A more detailed varietal report may be obtained from our office upon request.

U.S. JUNE EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 5.80 billion during June 1993, up 2 percent from the 5.69 billion produced a year ago. Production included 4.96 billion table eggs, 787 million broiler-type hatching eggs, and 60.0 million egg-type hatching eggs. The total number of layers during June averaged 280 million, up 2 percent from a year ago. June egg production per 100 layers was 2,074 eggs, compared with 2,067 in June 1992.

All layers in the U.S. on July 1, 1993, totaled 280 million, up 2 percent from last year's total of 275 million. The 280 million layers consisted of 235 million layers producing table or commercial type eggs,42.0 million layers producing broiler-type hatching eggs, and 2.83 million layers producing egg-type hatching eggs. Rate of lay per day on July 1, 1993, averaged 69.1 eggs per 100 layers, compared to last year's 69.2 eggs per 100 layers.

Laying flocks in the 20 major egg production States produced 4.75 billion eggs during June, up 2 percent from the 4.67 billion produced a year ago. The number of layers during June averaged 229 million, up 2 percent from a year ago. These monthly States accounted for about 82 percent of the U.S. egg production during the 3-month period, March through May 1993. Data for the remaining 30 quarterly States not surveyed monthly (which includes Montana) were estimated based on the percent change in the 20 States conducting monthly surveys.

JUNE RED MEAT PRODUCTION

Montana slaughter plants produced 1.5 million pounds of red meat in June 1993. This was a 23 percent increase from May, and a 6 percent increase from a year ago.

The number of cattle slaughtered, at 1,600 head, remained unchanged from last year. Average live weight increased 77 pounds to 1,279.

A total of 2,400 hogs were slaughtered in June, 100 head more than were slaughtered in 1992. Average live weight decreased 3 pounds to 233. Sheep and lamb slaughter, at 200 head, remained unchanged from last year. Average live weight decreased 3 pounds to 119.

Commercial red meat production for the United States totaled 3.48 billion pounds during June. This production was 2 percent above the record high for June set a year earlier.

Beef production totaled 2.05 billion pounds, up 1 percent from June 1992. Head kill totaled 3.01 million, up 3 percent from a year ago. The average live weight decreased 16 pounds to 1,143 pounds.

Veal production, at 22.0 million pounds, was down 11 percent from the record low set in June 1992. Calf slaughter totaled 93,800 head, down 13 percent. The average live weight was up 16 pounds to 410 pounds.

Pork production, at 1.38 billion pounds, was up 3 percent from the record high set in June 1992. Hog kill totaled 7.51 million head, up 2 percent from a year earlier. The average live weight was up 1 pound to 255 pounds.

Lamb and mutton production, at 31.0 million pounds, was up 14 percent from a year earlier. Slaughter totaled 477,900 head, up 10 percent. The average live weight increased 5 pounds to 130 pounds.

January-June red meat production was 19.7 billion pounds, down 2 percent from the comparable period a year earlier. Accumulated beef production was down 2 percent, veal was down 14 percent, pork was virtually unchanged, and lamb and mutton was down 4 percent.

U.S. MINK PELT PRODUCTION DOWN 11 PERCENT

Mink pelt production in the United States in 1992 totaled 2.89 million pelts, down 11 percent from 1991. Wisconsin, the major mink producing State, produced 696,500 pelts. By color class, the number of pelts as a percent of the total U.S. production follows: Standard - 46.0 percent; Mahogany - 15.6 percent; Ranch Wild - 15.2 percent; Gunmetal - 7.6 percent; Demi-buff - 7.5 percent. The remaining color classes accounted for 8.1 percent.

Mink pelts produced during the 1992 crop year were valued at $71.8 million, up slightly from $71.6 million a year ago. The average price per pelt for the 1992 crop year was $24.80, compared with $21.90 in 1991.

Female mink bred to produce kits in 1993 totaled 705,700, down 10 percent from the previous year. Percent of total females bred to produce kits in 1993 by color class are: Standard - 50.9 percent; Ranch Wild - 13.0 percent; Mahogany - 12.7 percent; Gunmetal - 8.9 percent; Demi-buff - 6.2 percent. The remaining color classes accounted for 8.3 percent.

There were 571 mink farms producing pelts in 1992, down 16 percent from a year ago. Leading States were Utah with 150 farms, Wisconsin with 114 farms, and Minnesota with 72. There were 57 mink farms which also raised fox in 1992, down 26 percent from the previous year.

QUARTERLY MILK PRODUCTION

Milk production for Montana dairymen totaled 83 million pounds in the April-June quarter of 1993. This is 1 million pounds less than the same quarter of the previous year, but up 5 million from the previous quarter of this year. The average number of cows remained unchanged from 1992 at 23,000 head.

An average of 17.3 pounds of grain and other concentrates were fed per cow on July 1, 1993, an increase of 1.3 pounds from this date last year. The value of grain and concentrates increased 60 cents per cwt, from $6.95 in 1992 to $7.55 in 1993.

The April-June quarterly production of milk for the U.S. was 39.6 billion pounds, up 1 percent from the same quarter last year and up 4.5 percent from the previous quarter this year. The average number of milk cows in the U.S. during the quarter was 9.7 million head, down 39,000 head from the previous quarter and down 103,000 head from the same period last year.

Grain and other concentrates fed to milk cows in the U.S. on July 1, 1993, averaged 17.6 pounds per cow which is unchanged from the same quarter last year. The value of grain and other concentrates fed to milk cows on July 1, averaged $7.71 per cwt, a decrease of $.11 per cwt from the previous year.

CATTLE ON FEED UP 7 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed for slaughter market in the 13 States preparing quarterly estimates totaled 9.49 million head, up 7 percent from a year ago and fractionally above July 1, 1991. This is the highest July 1 inventory since 1978. The inventory included 6.05 million steers and steer calves, 5 percent above a year ago. This group accounts for 63.7 percent of the total inventory. Heifers and heifer calves accounted for 3.37 million head, 11 percent above a year ago.

Placements of cattle and calves on feed in the 13 States during the April-June 1993 quarter totaled 5.28 million, fractionally above last year and 6 percent above April-June 1991. Net placements of 4.82 million for April-June were fractionally below last year but up 6 percent from 1991.

Marketings of fed cattle during the April-June 1993 quarter totaled 5.78 million, up 2 percent from last year but 1 percent below two years ago. Other disappearance totaled 460,000 head compared to 444,000 in April-June 1992 and 464,000 in April-June 1991.

Cattle feeders expect to market 5.95 million head during the July-September quarter of 1993. This would be up 3 percent from the third quarter marketings in 1992 but fractionally below 1991.

JULY 1 CROP PRODUCTION FORECAST

Montana's 1993 wheat crop is expected to be 173.9 million bushels, 25 percent more than the 1992 crop. The yield, forecast at 33.4 bushels per acre, is less than 4 bushels above last year, but harvested acreage is expected to be up more than 500,000 acres.

Winter wheat production, at 92.5 million bushels, is 52 percent above last year. Hard red spring wheat production is expected to be 78.0 million bushels, 6 percent more than the 1992 crop. Durum production, at 3.4 million bushels, is down 34 percent from last year.

Barley production, forecast to be 61.2 million bushels, is up 16 percent from 1992. Oats production is expected to be down from last year in spite of a record 60 bushel per acre yield. Production, forecast at 3.6 million bushels, is down 8 percent from 1992.

Montana cherry production is forecast at 900 tons, 100 tons more than last year's production. Pasture and range feed conditions are rated at 84 percent of normal on July 1, compared with 63 percent on that date last year.

U.S. all wheat production for 1993 is forecast at 2.60 billion bushels, up 6 percent from 1992. Area for grain is 64.2 million acres, up 3 percent from last year. The 1993 yield is forecast at a record high 40.5 bushels per acre, up 1.1 bushels per acre from last season.

Winter wheat production is forecast at 1.82 billion bushels, down slightly from the June 1 forecast, but 13 percent above 1992. Yields are expected to average 41.0 bushels per acre, down 0.2 bushels from June 1. Area for grain is 44.4 million acres, up 6 percent from last year. Reduced acreage and lower yields in some Hard Red Winter States contributed to the change from June 1.

Other spring wheat production is forecast at 699 million bushels, down 7 percent from last year's record high level. Yields are forecast at 39.4 bushels per acre, down 2.4 bushels per acre from 1992's record high. Area for grain, at 17.7 million acres, is off 2 percent from last year.

U.S. durum wheat 1993 production is forecast at 81.0 million bushels as of July 1. This is down 17 percent from 1992. Yields are forecast at 37.8 bushels per acre, off 1.9 bushels from last year's record high. Harvested area totaled 2.14 million acres, down 13 percent from 1992.

U.S. barley production is forecast at 462 million bushels. This is 1 percent above the 1992 production of 456 million bushels. Yields are expected to average 61.3 bushels per acre, 1.1 bushels less than last year. Area harvested and to be harvested, at 7.54 million acres, is up 3 percent from last year's 7.31 million acres.

Total U.S. oat production is forecast at 263 million bushels, down 11 percent from last year. The forecasted yield per acre of 63.3 bushels is down 2.3 bushels from last season's 65.6 bushels. Area harvested and to be harvested, at 4.15 million acres, is down 8 percent from the 1992 harvested acreage of 4.49 million acres.

PLEASE RETURN

JULY 1 PASTURE AND RANGE FEED CONDITIONS

Montana pasture and range feed condition for July 1, 1993 was 84 percent of normal, 5 points above June 1 and 21 points above last year at this same date. Cool weather retarded this year's growth in some areas, but more favorable soil moisture has brought good growth, especially to the north central district . The north central area, recovering from last year's drought, shows a 67 point improvement over year-ago condition, while the northeast district is down 4 points, all other areas are above last year.

MONTANA CHERRY PRODUCTION

Montana's 1993 cherry crop is forecast at 900 tons, 100 tons more than year's total production. Cherry orchards are recovering from severe winter kill in 1988-89 which required replanting in many cases. This year's bloom was later than normal. Pollination was affected by unusually hot weather and the resulting fruit set was disappointing. Harvest is expected to be later than usual because of the late bloom.

JUNE PRICES RECEIVED

Montana crop prices for mid-June were mixed. Winter wheat was down 19 cents to $3.00, and durum, at $2.80, decreased 27 cents from May. Other spring wheat increased 24 cents to $3.69 per bushel. All barley, at $1.79, dropped 34 cents from May. At $1.35, oats averaged 10 cents above the previous month. Other hay remained unchanged at $60.00 per ton, while alfalfa hay prices, at $72.00 per ton, increased $5.00 from May.

Livestock prices for mid-June were lower, compared with the previous month, except for steers and heifers. Cow prices dropped $1.20 to $50.20 per cwt, while the average price for steers and heifers increased 70 cents to $85.70 per cwt. Calf prices fell $1.30 to $96.00 per cwt. Milk prices increased 80 cents to $13.30 per cwt. Prices received for sheep were down $1.80 per cwt from last month to $29.00. Lambs followed with a $2.50 drop to $53.10.

The National All Farm Products Index of Prices Received in June was 141 based on 1977=100, down 3 points (2.1 percent) from May 1993. Price declines from May for wheat, cattle, onions, and tomatoes more than offset price gains for hogs, milk, eggs, and lemons.

Compared with June 1992, the June All Farm Products Index was 1 point (0.7 percent) higher. Price increases from June 1992 for cattle, eggs, potatoes, and tomatoes more than offset price decreases for corn, wheat, apples, and grapefruit.

The U.S. hog price increased $1.30 per cwt from May and $1.60 from last June to $48.30 per cwt. The national egg price was 65.4 cents per dozen compared with 62.9 last month and 53.0 cents in June 1992.

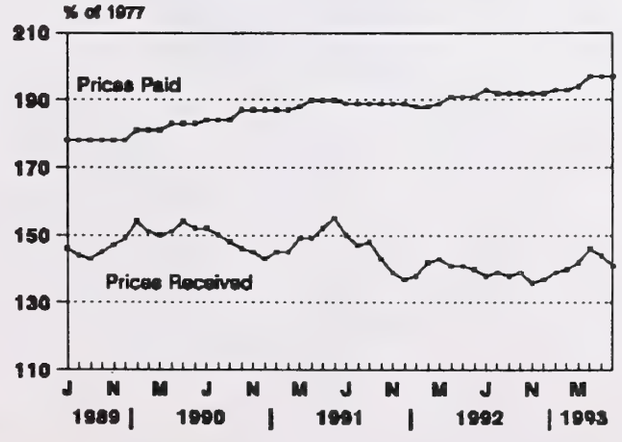
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



featuring...*McCONE COUNTY*

McCone County is situated in the northeastern section of Montana with the Missouri River defining its northern border. A leg of the Fort Peck Lake lies just on the western boundary of the county. The county itself is characterized mostly by plains, although the land along the northern boundary is broken up by the Missouri Breaks along the river. The county was created in April of 1919 and has an approximate land area of 1,680,793 acres.

A variety of crops are grown on the one million plus acres of farmland in the county. McCone ranked 9th in spring wheat production for the 1991 crop year and 15th in winter wheat production. Oats and barley are also grown extensively as the county ranked 13th in oats production and 16th in barley production in 1991. Cash receipts for crops brought in $11,744,000 or a ranking of 23rd in cash receipts.

McCone is also one of the major sheep raising counties as it ranked 6th in the state for sheep numbers in 1992. Cattle ranked 35th for January 1, 1992 inventory and hog inventory brought the county a ranking of 28th on December 1, 1991. Cash receipts for livestock and livestock products totaled $8,078,000 in 1991 and ranked 45th among the counties.

Adding the cash receipts for crops and livestock, plus government payments, brings the total cash receipts figure to $30,950,000 in 1991 and 30th place in the county rankings.

JUNE ACREAGE REPORT

Montana farmers plan to harvest 5.21 million acres of wheat, 11 percent more than last year. Winter wheat acres for harvest as grain are expected to be 2.5 million acres, 19 percent above last year's heavily abandoned acreage. Growers seeded 2.65 million acres of spring wheat, the same as last year and expect to harvest 2.6 million acres, 6 percent more than 1992. Durum wheat seeded on 115,000 acres is down 28 percent from last year. Acres of durum expected to be harvested for grain, at 114,000, are down 27 percent.

Barley was planted on 1.3 million acres, down 4 percent from the previous year, but harvested acreage, at 1.2 million acres, is the same as last year. Oats seeding, at 140,000 acres, is down 15 percent from last year. Producers expect to harvest 60,000 acres for grain, 14 percent less than in 1992. Farmers and ranchers intend to harvest 4 percent more hay acreage than last year. Alfalfa acreage, at 1.5 million, is up 7 percent. All other hay acreage, at 850,000 is unchanged from 1992. Corn acreage planted for all purposes, at 65,000, is down 7 percent from last year. Sugar beets were planted on 54,400 acres, down 3 percent from the previous year, while dry beans were planted on 12,000 acres, 18 percent more than last year.

The **United States** winter wheat growers seeded 51.9 million acres, up 2 percent from 1992 and up 1 percent from the previously published estimate. Grain area is now estimated at 44.4 million acres, up fractionally from the June 1 estimate and 6 percent higher than last year. Durum wheat area planted for 1993 is estimated at 2.20 million acres and 2.14 million acres are expected to be harvested for grain. The planted level is down 12 percent from 1992 and the acres for grain are down 13 percent; both are the lowest durum acreages since 1970. Other spring wheat planted area is 18.0 million acres, down 4 percent from 1992. Acreage for grain is placed at 17.7 million acres, down 2 percent from last year.

Barley seedings last fall and this spring totaled 7.94 million acres,up 2 percent from last year. The area to be harvested for grain is expected to total 7.54 million acres, up 3 percent from last year.

Oats planted totaled 8.06 million acres, up 1 percent from 1992. Growers intend to harvest 4.15 million acres for grain in 1993, down 8 percent from 1992. If realized, this would be the lowest harvested acreage since estimates were first made in 1866. Hay growers expect to harvest 60.2 million acres of hay in 1993. This acreage is 1 percent above last year, but 4 percent below 1991. The area cut for alfalfa and alfalfa mixtures is estimated at 23.9 million acres, 1 percent below the 1992 total of 24.2 million acres. Acreage of all other hay harvested is estimated at 36.3 million acres, up 2 percent from 1992.

The Montana crop acreage and grain stocks estimates in this issue of the Reporter are the result of surveying approximately 2,500 Montana farmers and ranchers during June. Names were selected on a statistical probability basis. SPECIAL THANKS to those operators that were interviewed and responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

7 STATE CATTLE ON FEED UP 7 PERCENT

Cattle and calves on feed for June 1 slaughter market in the 7 States preparing monthly estimates totaled 8.35 million head, up 7 percent from a year ago but down 3 percent from 1991. **Placements** of cattle and calves on feed in the 7 States during May totaled 1.79 million, up 4 percent from last year and 1 percent above two years ago. **Net placements** of 1.65 million for May were up 3 percent from last year and 1 percent above two years ago. **Marketings** of fed cattle during May totaled 1.65 million, up 3 percent from last year but fractionally below two years ago. **Other disappearance** totaled 136,000 head compared to 122,000 in 1992 and 141,000 in 1991.

[1] Preliminary. [2] Planted for all purposes. [3] Production forecast available July 12, 1993. [4] Production forecast available August 11, 1993. [5] Production forecast available November 9, 1993.

MAY 1993 RED MEAT PRODUCTION

Montana slaughter plants produced 1.2 million pounds of red meat in May 1993. This was a 1 percent increase from April, but a 7 percent decrease from a year ago. The number of cattle slaughtered, at 1,400 head, remained unchanged from last year. Average live weight increased 79 pounds to 1,276.

A total of 1,900 hogs were slaughtered in May, 400 head less than were slaughtered in 1992. Average live weight decreased 5 pounds to 231. Sheep and lamb slaughter, at 100 head, decreased 100 head from last year. Average live weight decreased 17 pounds to 117.

Commercial red meat production for the United States totaled 3.21 billion pounds during May. This production is 1 percent below a year earlier. Beef production totaled 1.86 billion pounds. This was down 2 percent from May 1992. Head kill totaled 2.77 million, up 1 percent from a year ago. The average live weight decreased 27 pounds to 1,123 pounds.

Veal production totaled 20.0 million pounds. This was down 21 percent from the record set in May 1992. Calf slaughter totaled 84,600 head, down 20 percent. The average live weight remained the same at 400 pounds.

Pork production, at 1.31 billion pounds, was up 2 percent from 1992. Hog kill totaled 7.15 million head, up 1 percent from a year earlier. The average live weight remained the same at 254 pounds.

Lamb and mutton production, at 27.0 million pounds, was up 9 percent from a year earlier. Slaughter totaled 410,900 head, up 6 percent. The average live weight increased 5 pounds to 132 pounds.

January-May red meat production was 16.2 billion pounds, down 2 percent from the comparable period a year earlier. Accumulated beef production was down 3 percent, veal was down 15 percent, pork was down 1 percent, and lamb and mutton was down 7 percent.

MAY MILK PRODUCTION

Milk production in the 21 major States during May totaled 11.4 billion pounds, 1 percent more than production in these same States in May 1992. April revised production at 11.0 billion pounds was 1 percent above April 1992. Production per cow in the 21 major States averaged 1,400 pounds for May, 33 pounds more than May 1992.

The number of cows on farms in the 21 major States was 8.14 million head, 106,000 head less than May 1992 and 9,000 less than April 1993. During the January-March period, the 21 major States produced 31.8 billion pounds of milk, 84.2 percent of the U.S. production. If producers in the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 13.5 billion pounds for May 1993.

JUNE 1 GRAIN STOCKS

Montana wheat stocks on June 1, 1993 amounted to 48.2 million bushels, 32 percent more than last year. This year's carryover is still the second lowest since 1974, and is 45 percent below the 10 year average.

Winter wheat stocks, at 18.2 million bushels, were 21 percent above a year ago and all spring wheat, at 30.0 million, was up 39 percent. All wheat stored on farms was up 40 percent from last year and off-farm stocks were up 14 percent. Barley stocks, in all locations on June 1, amounted to 16.2 million bushels up 5 percent from last June. Oats stocks, at 1.9 million bushels, are down 26 percent from last year.

U.S. old crop all wheat stocks in all positions June 1, 1993, totaled 529 million bushels, up 12 percent from June 1, 1992. Old crop durum wheat stored in all positions on June 1, 1993, totaled 49.0 million bushels, down 11 percent from last June. Barley stored in all positions on June 1, 1993, is estimated at 152 million bushels, 18 percent above the stocks of June 1, 1992. Oats stored in all positions on June 1, 1993, totaled 113 million bushels, down 11 percent from June 1, 1992. U.S. corn stored in all positions on June 1, 1993, is estimated at 3.71 billion bushels, up 35 percent from June 1, 1992.

QUARTERLY EGG PRODUCTION

During the March through May quarter of 1993, Montana layers produced 33 million eggs, down from 40 million produced last year. Layers during the quarter averaged 475,000 compared with 600,000 in 1992.

The Nation's laying flocks produced 17.9 billion eggs during the March-May quarter, up 1 percent from the corresponding quarter a year ago. Production included 15.3 billion table eggs, 2.37 billion broiler-type hatching eggs, and 196 million egg-type hatching eggs. Layers for the quarter averaged 281 million head, up 1 percent from the 278 million head a year ago.

All layers in the U.S. on June 1, 1993, totaled 280 million head, compared with 276 million head a year ago. The 280 million layers consisted of 234 million layers producing table or commercial type eggs, 43.0 million layers producing broiler-type hatching eggs, and 3.00 million layers producing egg-type hatching eggs. Rate of lay per day on June 1, 1993, averaged 69.1 eggs per 100 layers compared with 68.6 for June 1992.

JUNE 1 HOG & PIG INVENTORY

U.S. inventory of all hogs and pigs on June 1, 1993, is estimated at 59.7 million head. This is a 1 percent increase from last year and 6 percent above June 1, 1991. Breeding inventory, at 7.45 million head, is 2 percent below last year and 1 percent below two years ago. Market hog inventory at 52.2 million head, was 1 percent above a year ago and 7 percent above June 1, 1991.

The December 1992-May 1993 U.S. pig crop was 50.7 million head, slightly more than last year and 7 percent above the same period in 1991. Sows farrowing during the six month period totaled 6.24 million, down 1 percent from last year but 4 percent above the same period in 1991. Pigs saved per litter was 8.13, a new record high for the period, and compares with 8.06 last year and 7.92 two years ago. The March-May U.S. pig crop was 27.0 million head, 1 percent below a year earlier.

U.S. hog producers intend to have 6.19 million sows farrow during the June-November period, a slight increase from the actual sows farrowed during the same period in 1992 and 2 percent above two years ago. Farrowings for June-August are expected to be virtually unchanged from last year, while September-November farrowings are expected to be 1 percent above a year earlier.

1992 BARLEY COUNTY ESTIMATES

The 1992 barley county estimates will soon be available for distribution. The all and irrigated barley county estimates are in this publication, but estimates by class and cropping practice are available from this office upon request by calling 1-800-835-2612.

These estimates are the only county figures published for Montana. They are based on acreage and production surveys conducted last fall. Nearly 5,300 questionnaires were tabulated. The majority were completed by telephone to ensure better coverage in each county. Thanks to those who provided information!

WINTER WHEAT PRODUCTION PROSPECTS UNCHANGED

Montana's 1993 winter wheat crop is expected to be 90.0 million bushels, unchanged from the May 1 forecast. As of June 1 harvested acres are expected to be 2.5 million acres unchanged from the May 1 estimate. Yield is expected to average 36 bushels per acre.

Continued stress from lack of rainfall has held the crop potential down in the east and south central portions of the state. Favorable conditions in the important north central region helped boost production potential for the state to 48 percent above the 1992 level.

For the nation, winter wheat production is forecast at 1.82 billion bushels as of June 1, 1993. This is up 1 percent from the May 1 forecast and up 14 percent from the 1992 crop. Area for grain harvest is unchanged from May 1 at 44.3 million acres.

Yields are expected to average 41.2 bushels per acres, up 0.4 bushels from May 1 and 2.9 bushels per acre higher than last year. If realized, this yield will be second only to the 1983 record high 41.8 bushels per acre. Overall, crop development trails average progress, but condition is generally good. The Texas harvest has progressed into the Cross-Timbers area.

MAY PRICES RECEIVED

Montana crop prices for mid-May were lower, compared with the previous month, except for other spring wheat. At mid-May winter wheat was down 29 cents to $3.05, and durum, at $2.91, decreased 18 cents from April. Other spring wheat remained the same at $3.53 per bushel.

All barley, at $1.86, dropped 7 cents from April. Oats averaged $1.30, 22 cents below the previous month. Alfalfa hay prices, at $67.00 per ton, declined $5.00 from April, while other hay fell off $2.00 per ton to average $60.00 and all hay dropped $4.00 to $66.00.

Livestock prices for mid-May were all higher than entire month April prices. Cow prices rose $3.00 to $52.40 per cwt, while calf prices increased $2.00 to $104.00 per cwt. Steers and heifers averaged $87.70 per cwt, up $2.00 from April.

Milk prices were unchanged at $12.70 per cwt. Prices received for sheep advanced $7.40 per cwt from last month to $29.40. Lambs followed with a $5.10 increase to $60.80.

The **U.S.** All Farm Products Index of Prices Received in May was 146 based on 1977=100, unchanged from April 1993. Price declines from April for wheat, eggs, lettuce, and onions offset price gains for hogs, milk, broilers, and tomatoes.

Compared with a year earlier, the May All Farm Products Index was 5 points higher. Price increases from May 1992 for cattle, potatoes, eggs, and tomatoes more than offset price decreases for corn, wheat, oranges, and apples.

MONTANA'S 1993 CHERRY FORECAST

Montana's sweet cherry crop is forecast at 1,600 tons, double the production level of 1992. Production in the six western states is forecast at 148,300 tons, 21 percent less than last year, but 17 percent more than 1991.

Montana growers experienced cool weather during the spring season. Bloom was heavy. The average date of full bloom was May 12. The bloom date was late, putting pollination into a period of warm, sunny weather. Bee activity was excellent.

The California harvest is now nearly complete. Due to the cool spring, fruit size this year is remarkably large. The bulk of the crop was picked before the late May and early June rains. Growers in the Dalles area of Oregon have a normal size crop. The rest of the State expects below normal production. Washington has a nice crop. There has been rain but the crop is late and no rain damage has been reported. First harvest is expected June 15. Size could be good, if weather permits.

JUNE 1 PASTURE AND RANGE FEED CONDITIONS

Montana pasture and range feed condition for June 1, 1993 was 79 percent of normal, 5 points below May 1, but 15 points above last year at this same date. Cool weather retarded this year's growth in some areas, but more favorable soil moisture has brought good growth, especially to the north central district. The north central area, recovering from last year's drought, shows an 82 point improvement from last year, while the northeast district is down 18 points and the southeast is down 6 points.

CATTLE ON FEED UP 7 PERCENT IN 7 MONTHLY STATES

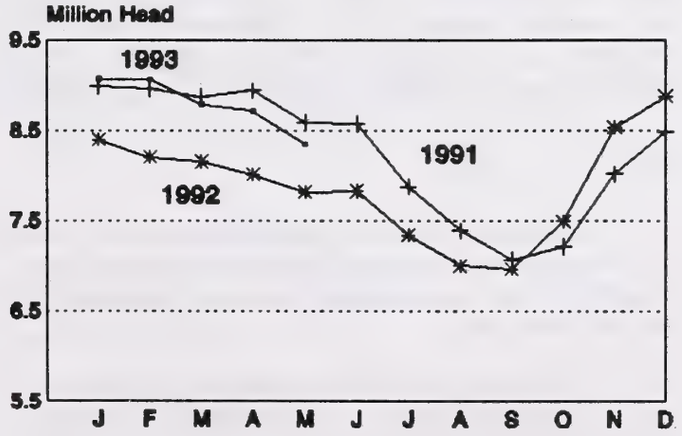
Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 8.35 million head, up 7 percent from a year ago but down 3 percent from May 1, 1991.

Placements of cattle and calves on feed in the 7 States during April totaled 1.32 million, down 8 percent from both last year and two years ago. These are the lowest April placements since 1980. Net placements of 1.19 million for April were also down 8 percent from last year and two years ago.

Marketings of fed cattle during April totaled 1.55 million, up 4 percent from last year but down 6 percent from two years ago.

Other disappearance totaled 126,000 head compared to 125,000 in April 1992 and 128,000 in April 1991.

CATTLE ON FEED
7STATES
(AZ, CA, CO, IA, KS, NE, TX)



APRIL MILK PRODUCTION

Milk production in the 21 major States during April totaled 11 billion pounds, 1 percent more than production in these same States in April 1992. March revised production at 11.1 billion pounds was slightly below March 1992. Production per cow in the 21 major States averaged 1,344 pounds for April, 30 pounds more than April 1992.

The number of cows on farms in the 21 major States was 8.16 million head, 97,000 head less than April 1992 and 20,000 less than March 1993.

During the January-March period, the 21 major States produced 31.8 billion pounds of milk, 84.2 percent of the U.S. production. If producers in the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 13 billion pounds for April 1993.

PLEASE RETURN

FARM WAGE RATES FOR APRIL

There were 2.88 million people working on the Nation's farms and ranches during the week of April 11-17, 1993. This compares with 2.87 million people during the April 1992 survey week. Self-employed farm operators accounted for 1.47 million of the total, along with 364,000 unpaid workers and 828,000 workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 224,000 workers.

Farm operators paid their hired workers an average wage of $6.37 per hour during the April 1993 survey week. This rate was up 32 cents from a year earlier. Workers paid on an hourly basis earned $6.10 per hour compared with $5.75 in April 1992.

Field workers received an average of $6.04 per hour, up 36 cents from the April 1992 survey week. Livestock workers earned $5.65 per hour compared with $5.52 a year earlier. Benefits, such as housing and meals, were provided to 44 percent of the hired workers during the survey week compared to 41 percent in April 1992.

Farm operators in the Mountain I region, which includes Montana, Idaho, and Wyoming, paid their hired workers an average wage of $5.76 per hour during the April 1993 survey week, up 9 percent from a year ago. Field workers received $5.67, up 39 cents from last year, while livestock workers earned $5.43, up 50 cents from wages in April 1992.

POTATO STOCKS

Montana producers stored 270,000 cwt of potatoes as of May 1, 1993, compared with 350,000 a year ago. The May 1 stocks represent 11 percent of production from the 1992 crop year.

Western potato stocks totaled 50.2 million cwt in the six storage States, down 7 percent from last year but slightly above two years ago. Idaho's stocks were down 2 percent from last year and accounted for 60 percent of the western holdings. Montana, nearing the end of the seed season, is off 23 percent. Oregon's holdings were off 37 percent, Washington's stocks dropped 15 percent, and California's stocks were 33 percent below a year ago. Colorado's stocks were up 13 percent.

U.S. potato stocks totaled 63.6 million cwt on May 1, 1993, down 8 percent from last year, but 1 percent above two years ago. Stocks equaled 18 percent of fall potato production in the 15 storage States, compared with 19 percent last year. Disappearance from the start of harvest through April totaled 291 million cwt of potatoes, down 1 percent from last year's record high but 4 percent above two years ago. Shrinkage and loss to date was estimated at 31.7 million cwt, 13 percent above the 28.2 million cwt lost last year and 22 percent above two years ago, when losses were 26 million cwt.

1992 MILK PRODUCTION, DISPOSITION & INCOME

Montana milk production decreased 1 percent in 1992 to 327 million pounds. An average of 23,000 milk cows were on farms during the year, down 1,000 head from 1991. The rate per cow, at 14,217 pounds, was 467 pounds above 1991.

Cash receipts from marketings of milk during the year, at 42 million dollars, was 8 percent above 1991. Producer returns averaged $13.40 per hundredweight, $1.10 above the 1991 average. Marketings totaled 312 million pounds, down 1 percent from 1991. A total of 15 million pounds of milk was used on farms, 9 million pounds were fed to calves, and 6 million were consumed as milk, cream, and butter.

U.S. milk production increased 2 percent in 1992 to 152 billion pounds. The rate per cow, at 15,423 pounds, was 563 pounds above 1991. The annual average number of cows on farms, at 9.84 million head, was 153 thousand less than the 1991 average.

Cash receipts from marketings of milk during 1992, at 19.8 billion dollars, was 10 percent above 1991. Producer returns averaged $13.25 per hundredweight, $0.89 per hundredweight above the 1991 average. Marketings totaled 150 billion pounds, 2 percent above 1991. An estimated 1.92 billion pounds of milk were used on farms where produced, 5 percent below 1991. Calves were fed 76 percent of this milk with the remainder consumed in producer households as milk, cream, and butter.

APRIL EGG PRODUCTION UP FRACTIONALLY

U.S. egg production totaled 5.86 billion during April 1993, up fractionally from the 5.84 billion produced a year ago. Production included 5.02 billion table eggs, 771 million broiler-type hatching eggs, and 65 million egg-type hatching eggs. The total number of layers during April averaged 281 million, up 1 percent from a year ago. April egg production per 100 layers was 2,082 eggs, compared with 2,099 eggs in April 1992.

All layers in the U.S. on May 1, 1993, totaled 281 million, up 1 percent from a year ago. The 281 million layers consisted of 234 million layers producing table or commercial type eggs, 43.5 million layers producing broiler-type hatching eggs, and 3.02 million layers producing egg-type hatching eggs. Eggs laid per day on May 1, 1993, averaged 68.9 eggs per 100 layers, down 1 percent from last year's 69.5 eggs per 100 layers.

Laying flocks in the 20 major egg producing States produced 4.8 billion eggs during April, down slightly from the 4.81 billion produced a year ago. The number of layers during April 1993 averaged 231 million, up 1 percent from the 228 million a year ago. These monthly States accounted for about 82 percent of the U.S. egg production during the 3-month period, December 1992 through February 1993.

APRIL RED MEAT PRODUCTION

Montana slaughter plants produced 1.2 million pounds of red meat in April 1993. This was an 11 percent decrease from March, and a 7 percent decrease from a year ago.

The number of cattle slaughtered, at 1,400 head, remained unchanged from last year. Average live weight increased 32 pounds to 1,199.

A total of 2,100 hogs were slaughtered in April, 300 head less than were slaughtered in 1992. Average live weight decreased 7 pounds to 232. Sheep and lamb slaughter, at 100 head, decreased 100 head from last year. Average live weight decreased 2 pounds to 125.

Commercial red meat production for the United States totaled 3.3 billion pounds during April. This production is 1 percent above a year earlier.

Beef production totaled 1.78 billion pounds. This was virtually unchanged from April 1992. Head kill totaled 2.68 million, up 4 percent from a year ago. The average live weight decreased 29 pounds to 1,125.

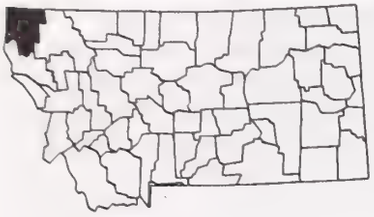
Veal production, at 22 million pounds, was down 13 percent from April 1992. Calf slaughter totaled 98,100 head, down 11 percent. The average live weight decreased 4 pounds to 386.

Pork production, at 1.47 billion pounds, was up 4 percent from 1992. Hog kill totaled 8 million head, up 3 percent from a year earlier. The average live weight increased 2 pounds to 254.

Lamb and mutton production, at 30 million pounds, was down 8 percent from a year earlier. Slaughter totaled 481,600 head, down 8 percent. The average live weight increased 3 pounds to 126.

January-April red meat production was 13 billion pounds, down 3 percent from the comparable period a year earlier. Accumulated beef production was down 3 percent, veal was down 14 percent, pork was down 1 percent, and lamb and mutton was down 10 percent.

featuring...*LINCOLN COUNTY*



Lincoln County is nestled among the mountains in the extreme northwest corner of the state. Created in July of 1909, the county covers approximately 2,314,150 acres. Lumbering is the chief industry in the county. The agricultural areas are limited, with the only considerable body of open land found in the Tobacco Plains Valley near Eureka. The Kootenai River traverses the county from west to east. The Libby Dam on the Kootenai River near the center of the county, forms Lake Kootenai which extends up into Canada. The Yaak River runs through the northwestern corner of the county and joins the Kootenai River near the Montana/Idaho border.

Limited agricultural interest is illustrated by land in farms occupying only 61,387 acres of the approximately 2.3 million acres in the county. Lincoln County ranked 53rd for all hay production and 52nd for oats in the 1991 crop production figures. In the livestock inventories, Lincoln County ranked 41st in hog numbers on December 1, 1991 and 55th in cattle numbers on January 1, 1992. County cash receipts for 1990 totaled a little more than $2,403,000. Livestock receipts made up $2,134,000, crops contributed $269,000, and government payments were less than $50,000.

WINTER WHEAT PRODUCTION AND HAY STOCKS

Montana 1993 winter wheat production is expected to be 90 million bushels, 48 percent above last year's crop. Acres expected to be harvested, at 2.5 million, are 19 percent above the previous year. Yield per acre, based on May 1 conditions, is forecast at 36 bushels, 7 bushels above last year.

Last fall seeding conditions were favorable for the winter wheat crop. Winter weather conditions were not severe, and snow cover protection was generally good when temperatures dropped to lowest levels. This spring, the major winter wheat areas received above average precipitation. These conditions set the stage for expected harvest of 96 percent of seeded acreage and a per acre yield that is 4 bushels above the 5-year average.

For the **Nation**, winter wheat production is forecast at 1.81 billion bushels, up 13 percent from 1992. Based on May 1 conditions, yield prospects average 40.8 bushels per acre, up 2.5 bushels from last year. Area for harvest as grain is forecast at 44.3 million acres, up 6 percent from 1992. Conditions are generally good but the crop is late developing.

Hay stocks on **Montana** farms May 1, 1993 were 884,000 tons, down 34 percent from last year's May 1, stocks. Farmers and ranchers had only 19 percent of their 1992 production on hand May 1, 1993. Disappearance in the December 1, 1992-May 1, 1993 period amounted to nearly 3.1 million tons, 5 percent less than last season.

Nationally, hay stocks on farms totaled 21.2 million tons on May 1, 1993, 26 percent less than May 1, last year. Disappearance of hay in the December 1, 1992-May 1, 1993 period totaled 84.7 million tons. This compares with 82.8 million tons in the same period a year ago.

MAY 1 PASTURE AND RANGE FEED CONDITION

Montana pasture and range feed condition for May 1, 1993, was 84 percent of normal, 2 points below last year at this same date. Cool, wet weather retarded this year's growth and some areas are recovering from last year's early drought conditions. The north central area shows a 29 point improvement over year-ago condition, while the east end of the state is down 11 to 16 points.

1992 DAIRY PRODUCTS

Butter production in the United States during 1992 totaled 1.37 billion pounds, 2 percent more than was produced in 1991. Wisconsin, the leading state, accounted for 26 percent of production, followed by California with 24 percent, and Washington with 9 percent.

Total cheese production, excluding cottage cheeses, was 6.49 billion pounds, 7 percent above the 1991 production. Wisconsin was the leading state with 32 percent of the production. American type cheese production, at 2.94 billion pounds, rose 5 percent above 1991 and accounted for 45 percent of total cheese in 1992.

Italian varieties continue their increase with a record high 2.51 billion pounds, 8 percent above the 1991 production, followed by Ricotta with 9 percent, and Provolone with 7 percent. Wisconsin was the leading state in Italian cheese production with 33 percent of the production. Creamed cottage cheese, at 457 million pounds, fell 8 percent from 1991, but lowfat cottage cheese, at 330 million pounds, rose 3 percent.

Frozen dairy products were mixed in 1992. Ice cream production totaled 875 million gallons, up 1 percent. Ice milk, at 329 million gallons, dipped 4 percent. Milk sherbet, at 49.9 million gallons, jumped 5 percent. Frozen yogurt production, at 134 millon gallons, dropped 9 percent. The 270 million gallons of soft products (ice cream, ice milk, and sherbet) made during 1992 accounted for 22 percent of the total frozen dairy products excluding yogurt. Soft frozen dairy products are sold from direct-serve soft freezer and milk shake machines.

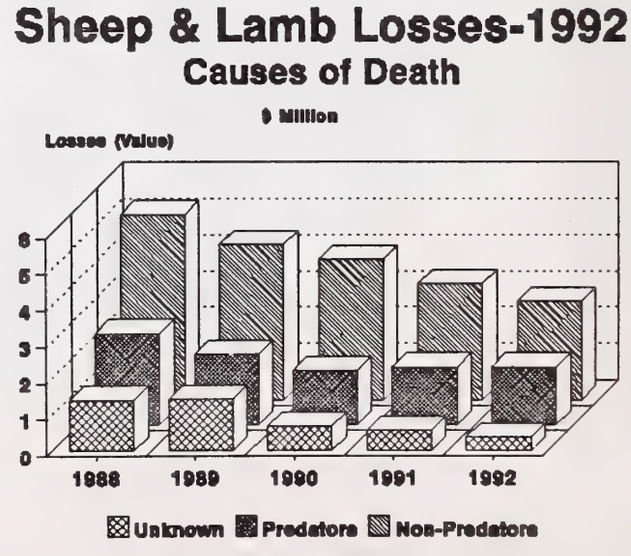
Nonfat dry milk for human food production, at 872 million pounds, was down 1 percent from 1991 production. Dry buttermilk production, at 61.1 million pounds, rose 2 percent.

MONTANA 1992 SHEEP AND LAMB LOSSES

Montana sheep producers lost 112,000 sheep and lambs to weather, predators, disease and other causes during 1992, representing a total value of $4.7 million. Total head lost was 21 percent lower than 1991. The total value of inventory lost in 1992 decreased $655,900 from the previous year.

Predators caused $1.6 million in losses, while non-predator factors accounted for $2.7 million and unknown causes claimed $.4 million. Coyotes remain the single largest cause of death resulting in a $1.2 million loss. This accounts for 26 percent of the total value of death losses in the state.

Lambs killed by all predators amounted to 32,900 head, down 5 percent from last year. Sheep killed by predators totaled 8,300 down 20 percent. Lambs lost to weather, disease and other non-predator causes totaled 40,600 head, down 29 percent from 1991. Sheep losses to non-predator factors totaled 22,400, marking a 15 percent decrease from last year. Lambs lost to unknown causes were down 58 percent to 3,500 head. Unknown causes claimed 4,300 head of sheep, down 19 percent from last year.



APRIL PRICES RECEIVED

Montana crop prices for mid-April were lower compared with the previous month, except for alfalfa hay and other spring wheat. At mid-April winter wheat was down 32 cents to $3.05, and durum, at $3.04, decreased 10 cents from March. Other spring wheat continued to increase and is currently averaging $3.49 per bushel. All barley was $2.06, dropping 12 cents from March. Oats averaged $1.16, 14 cents below the previous month. Alfalfa hay prices, at $72.00 per ton, remained unchanged from March while other hay and all hay each dropped $1.00 to $62.00 and $70.00 per ton, respectively.

Livestock prices for mid-April were mixed. Prices for sheep decreased $5.80 per cwt from last month to $27.60. Lambs followed with a $6.40 decrease at $66.80. Cow prices rose $1.00 to $50.10 per cwt while calf prices decreased $1.40 to $97.50 per cwt. Steers and heifers averaged $86.50 per cwt, up 40 cents from March. Milk prices moved up 10 cents to $12.70 per cwt.

The U.S. All Farm Products Index of Prices Received in April was 145 based on 1977=100, 3 points (2.1 percent) above March 1993. Price gains from March for lettuce, oranges, onions, and tomatoes more than offset price declines for hogs, cattle, tobacco, and celery.

Compared with a year earlier, the April All Farm Products Index was 4 points (2.8 percent) higher. Price increases from April 1992 for cattle, hogs, eggs, and lettuce more than offset price decreases for corn, wheat, oranges, and apples.

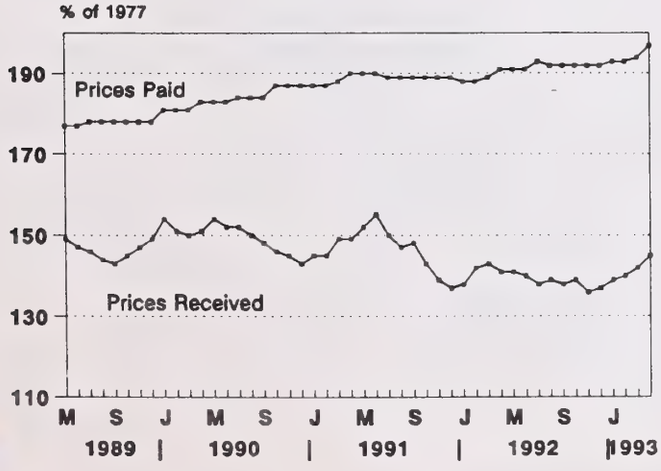
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



POULTRY PRODUCTION AND VALUE

Montana egg sales brought 28 percent less value to producers in 1992 compared with 1991. A large percentage of this drop was due to the 26 percent decrease in the average price received per dozen eggs from 1991 to 1992. Sixteen states had lower 1992 average prices for a dozen eggs than Montana's price of 49 cents. Only one other year's average (1988) has been lower in the past 20 years. Montana's egg production, at 160 million eggs, in 1992 was the lowest ever recorded in our state history. These two factors combined to produce a value of production of $6.5 million, the lowest in 20 years.

(Continued on back page)

POULTRY PRODUCTION AND VALUE (continued)

Although Montana's value of sales from chickens excluding broilers in 1992 decreased by 1.5 cents per pound, the U.S. average price per pound for chickens excluding broilers went up 1.5 cents. Overall, only 11 states experienced a decrease in price per pound and 5 states had 1992 averages that were more than double the average of the previous year.

The combined value of U.S. production from broilers, eggs, and turkeys and the value of sales from chickens in 1992, was $15.0 billion, up 2 percent from the $14.7 billion in 1991. Of the combined total, 61 percent was from broilers, 23 percent from eggs, 16 percent from turkeys, and more than one-half of 1 percent from other chickens.

The value of broilers produced during 1992 was $9.16 billion, up 9 percent from the $8.38 billion in 1991. The total number of broilers produced in 1992 was 6.39 billion, up 4 percent from 1991. The 1992 average price per pound on a liveweight equivalent basis was 31.8 cents per pound, compared to 30.8 cents per pound in 1991.

Value of egg production in 1992 was down 13 percent from 1991. This year's value of egg production is the lowest in the U.S. since 1988. Although 1992 egg production increased 2 percent over the last year, the average price per dozen eggs decreased by 15 percent.

The value of turkeys produced during 1992 was $2.39 billion, up 2 percent from the $2.34 billion the previous year. Turkey production in 1992 totaled 6.33 billion pounds liveweight, compared with 6.11 billion pounds in 1991. The prices received by producers during 1992 averaged 38.0 cents per pound of liveweight, unchanged from a year earlier.

March 1 Hogs & Pigs

WOOL PRODUCTION DOWN 9 PERCENT, VALUE UP 36 PERCENT

Montana wool producers produced 6.0 million pounds of wool during 1992, worth $5.1 million. This production is down 9 percent from 1991, while the total value of wool produced increased 36 percent. The total head shorn dropped 4 percent to 614 thousand, and the average fleece weight dropped one-half pound to 9.7 pounds. The average price per pound of wool sold increased 28 cents from 1991, to 85 cents.

Shorn wool production in the **United States** during 1992 was 83.4 million pounds, down 5 percent from 1991. Sheep and lambs shorn totaled 10.6 million head, a decrease of 4 percent from 1991. The average price paid for wool sold in 1992 was $0.74 per pound for a total value of $60.5 million, up 28 percent from $47.2 million in 1991.

There were 48.3 million pounds of domestic and foreign apparel and carpet scoured raw wool stored in the United States on January 1, 1993.

Planting intentions, grain stocks, and hog estimates in this issue are the result of surveying approximately 1,800 Montana farmers and ranchers during March. Names were selected on a statistical probability basis.

SPECIAL THANKS to those operators who responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

PROSPECTIVE PLANTINGS FOR 1993

Montana farmers intend to plant 7.0 million acres in 1993, the same as last year. Farmers were surveyed on March 1 for their planting intentions. Their plans are preliminary, depending on changes in weather, market conditions, etc.

The state's all wheat acreage is expected to be 5.5 million acres, up 1 percent from last year. Winter wheat seeded last fall remains unchanged from a year ago, at 2.6 million acres. Hard spring wheat, at 2.8 million acres, is expected to be up 6 percent. Durum is down 44 percent with 90,000 acres expected to be planted, the smallest amount seeded in the last 35 years.

Barley planted acreage is expected to be down 11 percent, to 1.2 million acres, the smallest acreage since 1980. Oats planting intentions are down 9 percent from a year ago at 150,000 acres, and they expect to harvest 65,000 acres for grain compared with 70,000 acres in 1992. Sugar beet intended plantings, at 57,400 acres, are up 3 percent; dry beans, at 11,000 acres, are up 8 percent, and corn, at 65,000 acres, is down 7 percent. Farmers expect to harvest 2.4 million acres of all hay which reflects a 4 percent increase.

In the **United States** all wheat planted for 1993 is expected to total 72.3 million acres, up slightly from 1992.

Winter wheat planted for 1993 is 51.2 million acres, fractionally higher than 1992, but off 1 percent from the total published in the "Winter Wheat and Rye Seedings" report, mainly due to wet weather in California and Oklahoma preventing seeding.

Durum wheat seeded for 1993 is expected to total 2.09 million acres, down 17 percent from 1992. This would be the smallest durum area since 1963.

Other spring wheat producers intend to seed 19.0 million acres of other spring wheat in 1993, up 1 percent from 1992. If realized, this will be the largest seeded area since 1953, propelled by a record high North Dakota acreage.

Barley growers intend to seed 7.66 acres to barley during 1993, down 2 percent from the 7.80 million acres seeded last year. Acreage is expected to be up in North Dakota, but down in Montana.

Oats producers plan to seed or have seeded a total of 8.11 million acres of oats for 1993, up 2 percent from the 7.96 million acres seeded in 1992.

GLOBAL WHEAT MARKET OUTLOOK FOR 1992/93

Larger wheat output in the former Soviet Union (FSU) and China is expected to dampen global import demand in 1992/93, despite gains in other foreign countries' imports.

- EC and Australian exports are projected up 2 million tons, while Canada's exports decline.
- U.S. exports rise, with market share expected to climb to 36 from 32 percent last year.

Generally good weather is expected to aid world winter wheat crops in 1993/94. Policy changes also influenced last fall's planting.

- Government pressure may have convinced China's farmers not to switch winter area out of wheat, despite last season's marketing difficulties.
- EC planted area is declining only slightly under CAP reforms, and mild temperatures and plentiful precipitation favor yields in the north.
- Delayed planting in the FSU reduced winter grain area.
- Drought continues in North Africa, but in Turkey favorable weather is likely to lead to another large crop.

MARCH PRICES RECEIVED

Mid-March prices received by Montana Farmers were mostly below the February entire month prices for crops, but mostly higher for livestock. Mid-March winter wheat was down 27 cents, at $3.14, and durum was off 28 cents, at $2.83, but spring wheat prices were 4 cents above the previous month. All barley was $1.97, down 5 cents from February. Oats averaged $1.17 per bushel, 5 cents below the previous month. Alfalfa hay advanced $1.00 per ton to average $72.00 per ton.

Sheep led the livestock advance with a $6.00 per cwt increase from February to March. Lambs followed with a $4.10 increase. Sheep averaged $38.80 per cwt and lambs $76.90. Cow prices were down $.60 per cwt at $48.50. Calf prices moved up $2.50, to $98.40 per cwt while steers and heifers were up $.40 per cwt at $84.50. Milk prices moved down $.50 to an average $12.60 per cwt.

The All Farm Products Index of Prices Received by U. S. farmers in March was 141 based on 1977=100, up 1 point from February. Price gains from February for eggs, cattle, hogs, and corn more than offset price declines for milk, apples, sweet corn, and lettuce.

The All Farm Products Index was down 4 points from March 1992. Price decreases for tomatoes, oranges, corn, and wheat more than offset price increases for cattle, hogs, eggs, and celery.

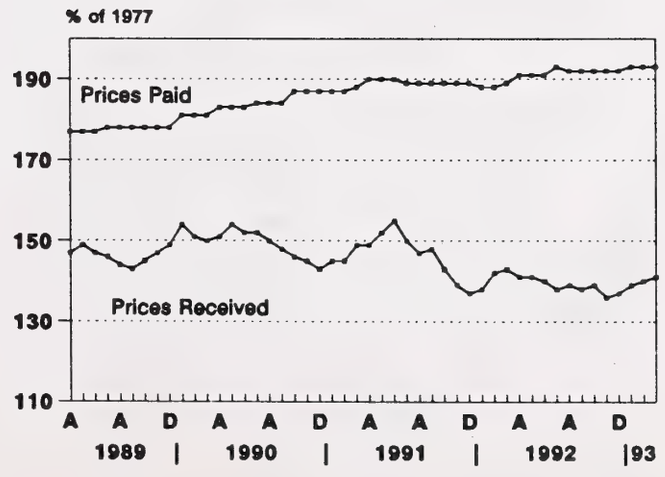
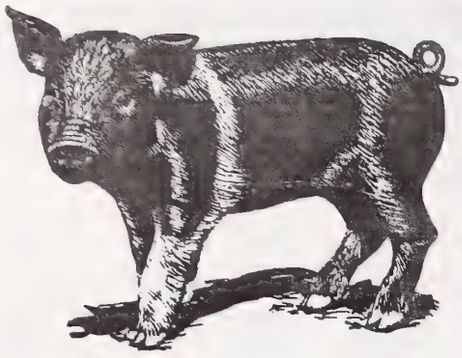
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED





MARCH 1 HOG & PIG INVENTORY

U.S. inventory of all hogs and pigs on March 1, 1993, is 58.3 million head. This is 4 percent above March 1992 and 10 percent above the March 1991 inventory.

Breeding inventory, at 7.43 million head, is up 4 percent from March 1, 1992, and 6 percent above March 1991. Market hog inventory, at 50.9 million head, is 4 percent above March 1, 1992, and up 11 percent from March 1, 1991.

The December 1992-February 1993 U.S. pig crop was 23.9 million head, 2 percent higher than 1992 and 12 percent above the same period in 1991. Sows farrowing during this period totaled 2.93 million head, up 1 percent from last year and 8 percent above a year earlier. Pigs saved per litter was a record high 8.15 compared to 8.04 during December 1991-February 1992.

U.S. producers intend to have 3.41 million sows farrow during the March-May 1993 quarter, 1 percent higher than actual farrowings during the same period last year and 4 percent above 1991. Farrowing intentions for June-August 1993, at 3.24 million sows, are up 3 percent from actual 1992 farrowings and up 4 percent from 1991.

FEBRUARY RED MEAT PRODUCTION

Montana slaughter plants produced 1.1 million pounds of red meat in February 1993. This was an 11 percent decrease from January, and a 10 percent decrease from last year.

The number of cattle slaughtered, at 1,200 head, dropped 200 head from February 1992. Average live weight of cattle slaughtered decreased 6 pounds to 1,134.

A total of 2,100 hogs were slaughtered in February, 200 less than a year ago. Average live weight increased 1 pound to 241. Sheep and lamb slaughter, at 200 head, decreased 100 head from last year. The average live weight was 123 pounds, 3 pounds lighter than the average last February.

Commercial red meat production for the United States totaled 3.01 billion pounds during February. This production is 3 percent below the record set in 1984 and 2 percent below a year earlier. Beef production totaled 1.68 billion pounds. This was 15 percent below the record high set in February 1976. Head kill totaled 2.47 million, up 1 percent from a year earlier. The average live weight decreased 17 pounds to 1,156.

Veal production, at 21.0 million pounds, was down 17 percent from a year earlier and lower than the record low set in February 1992. Calf slaughter totaled 98,900 head, down 13 percent. The average live weight decreased 1 pound to 373.

Pork production, at 1.29 billion pounds, was down 3 percent from the record high set in February a year earlier. Hog kill totaled 7.09 million head, down 3 percent from last year. The average live weight remained the same at 252 pounds.

Lamb and mutton production, at 25.0 million pounds, was down 11 percent from last year. Slaughter totaled 395,000 head, down 10 percent. The average live weight increased 1 pound to 129 pounds.

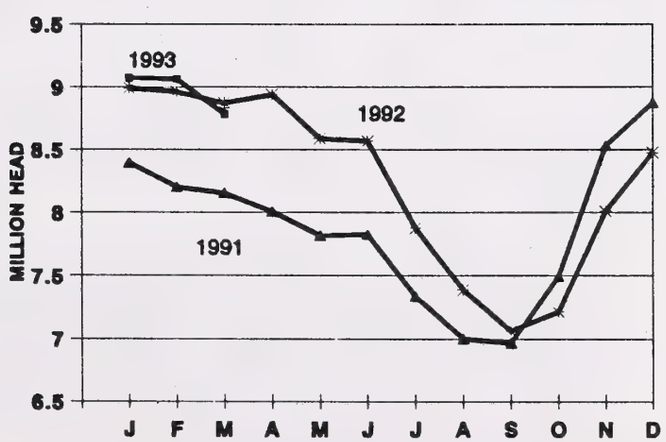
CATTLE ON FEED UP 8 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 8.79 million head, up 8 percent from a year ago but down 1 percent from March 1, 1991.

Placements of cattle and calves on feed in the 7 States during February totaled 1.26 million, down 15 percent from last year and 13 percent below 1991. Net placements of 1.15 million for February were down 16 percent from last year and 14 percent below 1991.

Marketings of fed cattle during February totaled 1.43 million, up 1 percent from last year and unchanged from two years ago. Other disappearance totaled 110,000 head compared to 120,000 in February 1992 and 113,000 in February 1991.

CATTLE ON FEED
7 STATES
(AZ, CA, CO, IA, KS, NE, TX)



FEBRUARY MILK PRODUCTION

Milk production in the 21 major States during February totaled 10.0 billion pounds, 2 percent less than production in these same States in February 1992 (February 1992 had 29 days). January revised production, at 10.8 billion pounds, was slightly above January 1992. Production per cow in the 21 major States averaged 1,218 pounds for February, 20 pounds less than February 1992.

The number of cows on farms in the 21 major States was 8.20 million head, 74,000 head less than February 1992 and 11,000 less than January 1993.

During the October-December period, the 21 major States produced 31.4 billion pounds of milk, 84.4 percent of the U.S. production. If producers in the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 11.8 billion pounds for February 1993.

1992 RED MEAT PRODUCTION

Red meat production in **Montana** totaled 17.2 million pounds during 1992, up 4 percent from 1991. Commercial cattle slaughter totaled 19,000 head, with an average live weight of 1,175 pounds. Hog slaughter totaled 29,900 head, with an average live weight of 237 pounds. A total of 3,900 lamb and mutton animals were slaughtered, with an average live weight of 123 pounds. Red meat production in commercial plants and on farms for the **United States** during 1992 totaled 41.0 billion pounds, up 4 percent from 1991.

Beef production was 23.1 billion pounds, up 1 percent from 1991. Veal production was 311 million pounds, up 2 percent from 1991. Pork production was 17.2 billion pounds, up 8 percent from 1991. Lamb and mutton production totaled 349 million pounds, down 4 percent from 1991.

Commercial only red meat production, at 40.8 billion pounds, was 3 percent above the record high of 39.8 billion pounds set in 1988. Record highs were set in five months in 1992.

Commercial only pork production, at 17.2 billion pounds, was 5 percent above the previous record high of 16.4 billion pounds produced in 1980. New record highs were set in nine months during 1992.

Commercial cattle slaughter during 1992 totaled 32.9 million head, up 1 percent from 1991, with federal inspection comprising 97.6 percent of the total compared with 97.5 last year. Calf slaughter, at 1.37 million head, was down 5 percent from the previous year with 97.3 percent under federal inspection. Hog kill totaled 94.9 million head, up 8 percent from 1991 with federal inspection comprising 97.6 percent. Commercial sheep and lamb slaughter, at 5.50 million head, was down 4 percent from 1991 with federal inspection comprising 96.2 percent.

Average live weight of cattle slaughtered commercially in 1992 was 1,169 pounds, up 6 pounds from 1991. The calf average live weight was 376 pounds for 1992, an increase of 30 pounds from the previous year. The average live weight for hogs remained the same at 252. Sheep and lambs averaged 125 pounds live weight, up 1 pound from 1991.

EGG PRODUCTION

Montana laying flocks produced 37 million eggs during the December 1992 through February 1993 quarter, compared with 40 million during the same quarter last year. Layers for the quarter averaged 560,000 head compared with 610,000 in 1992.

The Nation's laying flocks produced 17.5 billion eggs during the December through February quarter, down slightly from the corresponding quarter a year ago. Production included 15.1 billion table eggs, 2.24 billion broiler-type hatching eggs, and 182 million egg-type hatching eggs. Layers for the quarter averaged 281 million head, up 1 percent from the 280 million head a year ago.

All layers in the U.S. on March 1, 1993, totaled 281 million, compared with 279 million a year ago. The 281 million layers consisted of 236 million layers producing table or commercial type eggs, 42.5 million layers producing broiler-type hatching eggs, and 2.97 million layers producing egg-type hatching eggs. Rate of lay per day on March 1, 1993, averaged 69.2 eggs per 100 layers compared with 69.3 for March 1, 1992.

AGRICULTURE CHEMICAL USE

A portion of the third annual Ag Chemical Usage report issued by the National Agricultural Statistics Service (NASS) containing on-farm agricultural chemical use statistics is included in this Reporter. The full report and/or additional information can be obtained by calling our office at (800) 835-2612. The data presented in the report are part of the data series on chemical use funded through the 1990 Water Quality Initiative.

The Water Quality Initiative is a multi-agency program designed to provide information for farmers, ranchers, and foresters to address on-farm and off-farm environmental issues. In the past, there has been an inadequate amount of farm level data to determine the magnitude of water quality problems or to permit an assessment of alternatives for farmers and other affected parties.

NASS is responsible for collecting on-farm agricultural chemical use information to support the evaluation of water quality and food safety issues. The Economic Research Service (ERS) conducts research on the impact of alternative pesticide regulations, policies, and practices.

The report includes farm use of fertilizers and pesticides during 1992 on corn, cotton, potatoes, rice, soybeans, and wheat. It also includes, for the first time, data on target pest by pesticide product for fall potatoes, only. Intentions are to provide this type of information on other crops in the future. The use of trade names in this publication is for information only and should not be construed as a recommendation by NASS.

Wheat Highlights

Nitrogen fertilizer was applied to 85 percent of the **winter wheat** harvested acres in the 15 States surveyed. South Dakota was the only State where growers treated less than 60 percent of the acres for grain. Nearly 50 percent of the acreage received phosphate fertilizer. Coverage ranged from a low of 15 percent in Colorado up to 94 percent in Ohio. Potash was used on 17 percent of the acreage in the 15-State area; producers in Soft Red Winter States treated the highest percentage. Portions of the harvested area were treated with herbicides in all surveyed States; 2,4-D was by far the most widely used herbicide in quantity. Area treated with herbicides was above 90 percent in Oregon and Washington.

Spring wheat acreage, other than durum, treated with fertilizers in the 4 surveyed States (MN,MT,ND,SD) averaged 81, 72, and 22 percent for nitrogen, phosphate, and potash, respectively. Minnesota growers treated the highest percentages of area for all three nutrients. Herbicides were widely used in all States, with 2,4-D and MCPA being most prevalent. Insecticide and fungicide use was relatively limited.

WINTER WHEAT: Agricultural Chemical Applications, Montana, 1992 1/

1/ Area planted in 1992 for Montana was 2.65 million acres.
2/ Insufficient reports to publish data for the following agricultural chemicals: Herbicides: Fenoxaprop-ethyl, Glyphosate, MCPA, Metsulfuron-methyl, Picloram, Triallate, Trifluralin. Insecticides: Carbofuran.
3/ Refers to acres receiving one or more applications of a specific agricultural chemical.

Note: Data may not multiply across due to rounding.

MARCH 1 SHEEP AND LAMBS ON FEED

The number of sheep and lambs on feed March 1, 1993, for the slaughter market on Montana farms and ranches totaled 12,000 head, down 61 percent from the 31,000 head in January. Lambs accounted for 83 percent of the total.

There were 3,000 lambs on pasture and/or crop residue and 7,000 in feedlots. Montana placed 3,000 lambs on feed during January and February. Marketings during the period amounted to 20,000 head, while 1,000 ewe lambs were placed back into the breeding herd.

Sheep and lambs on feed March 1, 1993, for slaughter market in the 16 major producing States totaled 1.18 million head, down 28 percent from the 1.65 million head in January. The inventory included 1.16 million lambs for slaughter market and 29,000 mature sheep.

Of the March 1 total lambs on feed, 69 percent were in feedlots. In January, 61.6 percent were in a feedlot and 38.4 percent were on pasture and/or crop residue. The percentage of feedlot lambs on March 1 by weight class were: 15 percent under 85 pounds, 39 percent between 85-105 pounds and 46 percent over 105 pounds. For lambs on pasture and/or crop residue, 32 percent were under 85 pounds, 30 percent were 85-105 pounds and 38 percent were over 105 pounds.

Placements of lambs on feed in the 16 States during January and February 1993 totaled 439,500 head, while marketings of fed lambs for slaughter during the same period totaled 689,000 head. There were 14,000 ewe lambs originally intended for slaughter but returned to the breeding herd.

MARCH 1 POTATO STOCKS

Montana producers stored 2.2 million cwt of potatoes as of March 1, 1993, compared with 2.3 million a year ago. The March 1 stocks represent 89 percent of production from the 1992 crop year.

Western potato stocks totalled 100 million cwt in six States, down 6 percent from last year and slightly below two years ago. Idaho's stocks were down 1 percent from last year and accounted for 58 percent of the western holdings. Montana, with seed potatoes, was down 4 percent. Washington's stocks were off 18 percent, Oregon was down 25 percent, and California's stocks were off 12 percent. Colorado was up 5 percent from a year ago and the only State west of the Mississippi with more potatoes than a year ago.

U.S. Potato stocks totaled 140 million cwt on March 1, 1993, down 4 percent from last year but 4 percent above two years ago. Stocks now are 39 percent of fall potato production in the 15 storage States, compared with 40 percent a year ago.

MONTANA WHEAT & BARLEY MOVEMENT

Montana wheat shipped to out-of-state destinations in June-November 1992, at 39.0 million bushels, was 39 percent below the same period last year.

Shipments to western destinations (primarily export facilities of Washington and Oregon) were 43 percent below the previous June-November period. Wheat movement to eastern destinations was up 88 percent. Shipments to other destinations (primarily Colorado and Arizona) were up 36 percent. Rail movement amounted to 35.2 million bushels, down from 59.6 million shipped by rail during the same period in 1991. Trucks carried 4.2 million bushels compared with 5.3 million the previous June-November period.

Montana barley shipped to out-of-state destinations in June-November 1992 was 7.9 million bushels, up 2 percent from the same period last year. Barley shipped west amounted to 6.7 million bushels, up 8 percent from the 6.2 million bushels in the June-November 1991 period. Eastern shipments totalled 1.2 million bushels, down 21 percent from the 1.5 million bushels the previous year. Movement to other destinations, totalling 52,000 bushels, was down 40 percent from the same period last year.

[3/] Northwest and Southwest were combined to avoid disclosing individual operations. [4/] Other and Unknown.

MONTANA'S RANK HIGHLIGHTS

- Ranking of crop production for 1992 decreased from the record 1991 crop year for nearly all crops. Exceptions were for durum wheat and dry beans which were unchanged and corn for grain which moved up one place.
- Our cattle rank was unchanged from January 1, 1992, while we slipped a few positions for both hogs and sheep. Other livestock rankings remained stable while egg production is down one position.
- Total cash receipts remained unchanged, but both crops and livestock cash receipts dropped one position.

SALUTE OUR FARMERS, RANCHERS AND AGRI-BUSINESSES DURING *NATIONAL AG WEEK MARCH 14-20*

FEBRUARY PRICES RECEIVED

Montana crop prices for mid-February were mostly lower compared with the previous month, except for oats, alfalfa hay, other hay, and all hay.

At mid-February all wheat averaged $3.39 per bushel, down 18 cents from January. All barley averaged $2.11 per bushel, dropping 25 cents from January. Oats averaged $1.20, unchanged from last month. Hay prices remained unchanged from January with alfalfa hay still at $71.00 per ton, other hay at $60.00 per ton, and all hay averaging $69.00 per ton.

Livestock prices for mid-February were mixed. Prices for steers and heifers averaged $87.00 per cwt, down 40 cents from January. Cow prices rose 20 cents to $48.00 per cwt while calf prices decreased 80 cents to $95.50 per cwt. Lamb prices averaged $73.50 per cwt, increasing $4.40 from last month, while sheep prices were down $2.40 per cwt to $28.40. Milk prices, at $13.20 per cwt, were down slightly from last month.

The U.S. All Farm Products Index of Prices Received in February was 139 based on 1977=100, the same as January. Price gains from January for hogs, cattle, sweet corn, and celery offset price declines for tomatoes, milk, carrots, and eggs.

The All Farm Products Index was down 4 points from last year. Price decreases for tomatoes, oranges, corn, and wheat more than off set price increases for cattle, celery, hogs, and eggs.

1992 ALFALFA SEED PRODUCTION

Montana alfalfa seed producers harvested 2.52 million pounds of seed in 1992, amounting to 47 percent of the previous year's production. Proprietary varieties made up 71 percent of this year's production, 23 percent was common uncertified varieties, and 6 percent certified public varieties.

The 1992 alfalfa seed yield per acre was 265 pounds, down from the 1991 yield of 270 pounds. Acres harvested for seed in 1992, at 9,500, is down 52 percent from 1991. The average price received for the 1992 crop was 96 cents per pound, the same price received for the 1991 crop.

JANUARY RED MEAT PRODUCTION

Montana slaughter plants produced 1.3 million pounds of red meat in January 1993. This was an 18 percent decrease from December, and a 15 percent decrease from last year. The number of cattle slaughtered, at 1,400 head, dropped 300 head from December 1992. Average live weight of cattle slaughtered increased 3 pounds to 1,123.

A total of 2,300 hogs were slaughtered in January, 400 less than a year ago. Average live weight increased 16 pounds to 252. Sheep and lamb slaughter, at 200 head, decreased 100 head from last year. The average live weight was 126 pounds, 1 pound lighter than the average last January.

Commercial red meat production for the United States totaled 3.31 billion pounds during January. This production is 9 percent below a year earlier. Beef production totaled 1.82 billion pounds. This was 1 percent below the record low set in 1949. Head kill totaled 2.67 million, down 9 percent. The average live weight decreased 9 pounds to 1,164.

Veal production, at 22.0 million pounds, dropped 22 percent. This was the lowest production in January since 1974. Calf slaughter totaled 104,000 head, down 21 percent. The average live weight decreased 1 pound to 365.

Pork production, at 1.44 billion pounds, dropped 6 percent from a year earlier. Hog kill totaled 7.83 million head, down 6 percent from last year. The average live weight decreased 1 pound to 254 pounds.

Lamb and mutton production, at 25.0 million pounds, was down 20 percent from last year. Slaughter totaled 392,800 head, down 19 percent. The average live weight remained the same at 128 pounds.

7 STATE CATTLE ON FEED UP 11 PERCENT

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 9.07 million head, up 11 percent from a year ago and up 1 percent from February 1, 1991. This is the largest February 1 cattle on feed number since 1974.

Placements of cattle and calves on feed in the 7 States during January totaled 1.61 million, up 3 percent from last year but 6 percent below 1991. Net placements of 1.48 million for January was up 1 percent from last year but 8 percent below 1991.

Marketings of fed cattle during January totaled 1.49 million, down 10 percent from last year and 9 percent below two years ago. This is the smallest January marketings since 1976.

Other disappearance totaled 130,000 head compared to 99,000 in January 1992 and 118,000 in January 1991.

FARM LABOR WAGE RATES UP, WORKERS DOWN

There were 2.51 million people working on the Nation's farms and ranches during the week of January 10-16, 1993. This compares with 2.57 million people during the January 1992 survey week. Self-employed farm operators accounted for 1.42 million of the total, along with 313,000 unpaid workers, and 611,000 workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 157,000 workers.

Farm operators paid their hired workers an average wage of $6.40 per hour during the January 1993 survey week. This rate was up 3 cents from a year earlier. Workers paid on an hourly basis earned $5.99 per hour compared with $5.97 in January 1992.

Field workers received an average of $6.02 per hour, up 3 cents from the January 1992 survey week. Livestock workers earned $5.64 per hour compared with $5.62 a year earlier.

Benefits, such as housing and meals, were provided to 45 percent of the hired workers during the survey week, compared to 44 percent in January 1992.

Farm operators in the Mountain I region, which includes Montana, Idaho, and Wyoming, paid their hired workers an average wage of $6.46 per hour during the January survey week, up 9 percent from a year ago. Field workers were paid $6.86, 70 cents more than last year, while livestock workers were paid $5.95, 34 cents more than wages of January, 1992.

JANUARY MILK PRODUCTION

Milk production in the 21 major States during January totaled 10.8 billion pounds, 1 percent more than production in these same States in January 1992. December revised production at 10.7 billion pounds was 2 percent above December 1991.

Production per cow in the 21 major States averaged 1,315 pounds for January, 24 pounds more than January 1992. The number of cows on farms in the 21 major States was 8.22 million head, 79,000 head less than January 1992 and 28,000 less than December 1992.

During the October-December period, the 21 major States produced 31.4 billion pounds of milk, 84.4 percent of the U.S. production. If producers in the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 12.8 billion pounds for January 1993.

FEBRUARY 1 POTATO STOCKS

Montana producers stored 2.2 million cwt of potatoes as of February 1, 1993, compared with 2.5 million a year ago. The February 1 stocks represent 91 percent of production from the 1992 crop year.

Western States held 120 million cwt of potatoes in storage on February 1, 1993. This level is down 7 percent from last year but slightly more than two years ago. Oregon's stocks were down 26 percent, while Washington dropped 16 percent. Idaho's stocks were off 1 percent and accounted for 57 percent of the Western total. Montana was down 9 percent and California's storage was off 10 percent. In Colorado, the only western State to show an increase, stocks were up 3 percent from last year.

The 15 major potato States held 170 million cwt of potatoes on February 1, 1993, down 5 percent from last year but 5 percent above two years ago. Storage accounted for 48 percent of fall production this year, 1 percentage point less than last year. Stocks by type are 3 percent red, 20 percent white, and 77 percent russet, with more white and less russet than a year ago.

Disappearance from the start of harvest through January was 185 million cwt, slightly less than the record high last year but 2 percent more than two years ago. Shrink and loss to date was estimated at 23.0 million cwt, up 9 percent from the 21.2 million cwt lost last year and 14 percent above the 20.1 million cwt lost from the 1990 crop.

Processor usage totaled 85.1 million cwt as of February 1, 1993, down 1 percent from a year ago and 2 percent less than two years ago. January processing of 13.6 million cwt of potatoes dropped 5 percent from the last two years.

JANUARY U.S. EGG PRODUCTION UP 1 PERCENT

U.S. egg production totaled 5.99 billion during January 1993, up 1 percent from the 5.95 billion produced a year ago. Production included 5.15 billion table eggs, 771 million broiler-type hatching eggs, and 61.0 million egg-type hatching eggs. The average number of layers during January was 282 million, up 1 percent from the 280 million in January 1992. January 1993 egg production averaged 2,126 eggs per 100 layers, the same as January 1992.

All layers in the U.S. on February 1, 1993, totaled 283 million, up 1 percent from a year ago. The 283 million layers consisted of 237 million layers producing table or commercial type eggs, 42.7 million layers producing broiler-type hatching eggs, and 2.86 million layers producing egg-type hatching eggs. Rate of lay per day on February 1, 1993, averaged 67.6 eggs per 100 layers, down 1 percent from last year's 68.0 eggs per 100 layers.

MONTANA HONEY PRODUCTION ROSE 21 PERCENT

Montana's honey industry produced 9.570 million pounds in 1992, up 21 percent from the 7.912 million pounds produced last year. There were 87,000 colonies producing honey in 1992, 1,000 more than in 1991. The average yield per colony was 110 pounds compared with 92 pounds last year.

The state's honey producers received an average price per pound of 57 cents this year, the same as last year. The total value of the state's honey crop is 5.5 million dollars up 21 percent from the total of 4.5 million dollars in 1991. Honey stocks held by producers on December 15, 1992 totaled 1.818 million pounds, compared with 1.187 a year earlier.

Unites States honey production in 1992 from producers with five or more colonies totaled 221 million pounds, up 1 percent from 1991. There were 3.03 million colonies producing honey in 1992, compared with 3.18 million in 1991. Yield per colony averaged 72.8 pounds, up 3.9 pounds from the 68.9 pounds in 1991. Colonies that produced in more than one State were counted in each State and yields may be understated. Producer honey stocks were 38.9 million pounds on December 15, 1992, up 7 percent from a year earlier.

Prices for the 1992 crop averaged 55.8 cents per pound, up slightly from the 1991 price of 55.6 cents per pound. Prices are based on retail sales by producers and sales to private processors and co-ops. At the U.S. level, prices for each color are derived by weighting State average prices by the State quantities sold. Government payments are excluded from the honey prices. Higher prices received for extra light amber honey resulted in the slightly higher price for all honey in 1992.

MONTANA 1992 CROP PRODUCTION

Montana's 1992 small grain growing season started early and finished late. Warm, dry weather through the winter months encouraged winter wheat to break dormancy early, and by the end of February about 30 percent of the acreage was out of dormancy.

Spring tillage work started early. By the end of the first week of April, 10 to 15 percent of the major small grains where seeded. Dry soils and insect activity reduced germination and retarded growth.

Light precipitation in April and May allowed only minimum crop growth and development. The North Central area of the state was especially dry with most locations showing less than half the normal precipitation accumulated from April 1. Stands were thin and spotty.

Substantial rains arrived the last week of May, but it was mid-June before long term relief came to change the character of the 1992 season. Mid-season moisture germinated seeds that waited in dry soils. This resulted in uneven stands but added to production potential. July was cool and wet favoring development of most small grain.

Harvest started late and progressed slowly because of weed growth and immature small grain plants that had germinated late. Snow and cold temperatures the last week of August added to harvest woes.

All wheat production in 1992 totaled 139.6 million bushels, 12 percent less than last year's large crop, but 5 percent above the five-year average.

Barley production, from 27 percent fewer acres than last year, was down 38 percent, and was 21 percent less than the five-year average.

MONTANA CROP PRODUCTION VALUE UP 2 PERCENT

Montana's 1992 crop production, valued at 1.08 billion dollars, is 2 percent above last year. Higher wheat and barley prices off set reduced production. A strong advance in hay prices also was a large factor in the calculated value of production.

Spring wheat production was down 10 percent and winter wheat production was off 15 percent. Barley production dropped 38 percent. The season average wheat price used to value this year's production, at $3.45 per bushel, was up 28 cents per bushel from 1991. The barley price advanced 26 cents.

Hay production was down 10 percent from last year, but the average price moved up $20.50 per ton pushing value of production up 24 percent.

JANUARY 1 POTATO STOCKS

Montana producers stored 2.3 million cwt of potatoes as of January 1, 1993, compared with 2.6 million a year ago. The January 1 stocks represent 93 percent of production from the 1992 crop year.

Western States held 138 million cwt of potatoes in storage on January 1, 1993. This is down 7 percent from last year and 2 percent less than in 1991. Compared with a year ago, Oregon's stocks were 19 percent smaller, while Washington dropped 17 percent, and Idaho's stocks dipped 2 percent. Colorado's potato stocks were off 1 percent, **Montana's** storage dropped 11 percent, and California stored 8 percent fewer potatoes than a year ago.

The 15 major potato States held 202 million cwt of potatoes on January 1, 1993, down 4 percent from last year but 4 percent above two years ago. Storage accounted for 57 percent of fall production this year, 1 percent less than last year. Stocks by type are: 3 percent red, 21 percent white, and 76 percent russet, with more white and less russet than a year ago.

Disappearance from the start of harvest through December was a record high 153 million cwt of potatoes, up 1 percent from last year and 8 percent above two years ago. Shrink and loss to date was estimated at 20.4 million cwt, up 8 percent from the 18.8 million cwt lost last year and 14 percent above the 17.8 million cwt lost from the 1990 crop.

Processor usage totaled 72.4 million cwt to January 1, 1993, up 2 percent from a year ago, but slightly less than 1991. December processing of 15.3 million cwt of potatoes jumped 23 percent from 1992 and 6 percent above 1991.

MONTANA ANNUAL CROP SUMMARY, 1992 1/

OCTOBER-DECEMBER MILK PRODUCTION

Montana milk production during October-December totaled 86 million pounds, up 4 percent from the same quarter last year. The average number of milk cows remained unchanged from last year, at 24,000 head.

On January 1, 1993 the amount of grain and other concentrates fed to milk cows in the state averaged 16.5 pounds, one-half pound less than the amount fed a year ago. The value of grain and other concentrates fed to milk cows averaged $7.15 per hundred-weight on January 1 of this year, $0.05 less than the January 1, 1992 price.

The **U.S.** quarterly production of milk was 37.3 billion pounds, 3 percent above the October-December quarter last year. The average number of milk cows in the U.S. during October-December was 9.84 million head, 76,000 less than the same period last year.

Grain and other concentrates fed to milk cows on January 1, 1993, averaged 18.4 pounds per cow, 0.4 pounds more than on January 1, 1992. The value of grain and other concentrates fed to cows on January 1, 1993, averaged $7.67 per hundredweight, $0.02 less than January 1, 1992.

DECEMBER RED MEAT PRODUCTION INCREASES

Montana slaughter plants produced 1.6 million pounds of red meat in December 1992. This was a 7 percent increase from November, and a 15 percent increase from last year.

The number of cattle slaughtered, at 1,900 head, increased 400 head from December 1991. Average live weight increased 55 pounds to 1,169. A total of 2,200 hogs were slaughtered, 300 less than a year ago. Average liveweight remained unchanged at 243. Sheep and lamb slaughter, at 300 head remained unchanged from last year. The average live weight, at 117 pounds, was 3 pounds heavier than the average in December 1991.

Commercial red meat production for the **United States** totaled 3.43 billion pounds during December. Production is 5 percent above a year earlier and slightly higher than the previous December record of 3.42 billion pounds set in 1981. Beef production totaled 1.85 billion pounds. This was up 4 percent from a year earlier. Head kill totaled 2.70 million, up 5 percent. The average live weight decreased 1 pound to 1,171.

Veal production, at 26.0 million pounds, was down 6 percent. Calf slaughter totaled 123,900 head, down 7 percent, but average live weight increased 13 pounds to 361. Pork production, at 1.52 billion pounds, was up 6 percent from a year earlier, surpassing the previous December record of 1.45 billion pounds set in 1981. Hog kill totaled 8.36 million head, up 5 percent from last year. The average live weight remained the same at 254 pounds.

Lamb and mutton production, at 29.0 million pounds, was down 4 percent from last year. Slaughter totaled 477,200 head, down 2 percent and average live weight remained 125 pounds. January-December red meat production was 40.8 billion pounds, up 4 percent from the comparable period a year earlier. Accumulated beef and veal production were both up 1 percent, pork rose 8 percent, but lamb and mutton fell 4 percent.

1992 EGG PRODUCTION & CHICKEN INVENTORY

Montana poultrymen produced 160 million eggs during the year ending November 30, 1992, down 4 million from the previous year's production. Layer numbers during 1992 averaged 604,000 compared with 626,000 a year earlier. The annual average production per layer on hand was 264 eggs, 1 percent above 1991.

There were 710,000 total chickens on Montana farms and ranches on December 1, 1992, compared with 780,000 on hand last year. The inventory value was $1,846,000, down from $2,184,000 on December 1, 1991.

U.S. egg production during the year ending November 30, 1992, totaled 70.5 billion eggs, up 2 percent from last year's total of 69.2 billion eggs. Layer numbers during 1992 averaged 278 million, up 1 percent from 1991. The annual average production per layer on hand in 1992 was 254 eggs, up 1 percent from the 1991 average of 252 eggs per layer.

The total number of chickens on hand on December 1, 1992, (excluding broilers) was 364 million head, up fractionally from last year. The total value was $827 million, down from $833 million on December 1, 1991.

DECEMBER EGG PRODUCTION UP 1 PERCENT

The Nation's laying flock produced 6.09 billion eggs during December 1992, up 1 percent from the 6.04 billion produced a year ago. Production included 5.27 billion table eggs, 758 million broiler-type hatching eggs, and 60.0 million egg-type hatching eggs. The total number of layers during December 1992 averaged 281 million, up fractionally from the 280 million a year ago. December egg production per 100 layers was 2,165 eggs, compared with 2,155 in December 1991.

All layers in the U.S. on January 1, 1993, totaled 280 million, compared with 281 million a year ago. The 280 million layers consisted of 236 million layers producing table or commercial type eggs, 41.7 million layers producing broiler-type hatching eggs, and 2.78 million layers producing egg-type hatching eggs. Rate of lay per day on January 1, 1993, averaged 69.4 eggs per 100 layers, down 1 percent from last year's 69.8 eggs per 100 layers.

Data for the 30 quarterly States were estimated based on the percent change in the 20 States conducting monthly surveys. These monthly States accounted for about 82 percent of the U.S. egg production during September through November 1992.

1993 WINTER WHEAT SEEDED ACRES UNCHANGED FROM 1992

Montana farmers seeded 2.6 million acres of winter wheat last fall for harvest in 1993. This represents no change from the 1992 winter wheat seeded acreage level, but a 3 percent increase over the 10-year average. Harvesting operations competed with planting winter wheat last fall. What was planted had good moisture for germination and warm temperatures for development; however, little snow cover existed until late December. The condition of the dormant crop was rated as mostly fair to good at the end of December.

Nationally, the seeded area for the 1993 crop is set at 51.5 million acres, up 1 percent from 1992. Planting of the 1993 crop began last August in a handful of States. From then on seeding progressed by varying degrees thorough the fall, reaching 97 percent completion as of December 1, 1992. Hard red winter wheat totals 36.3 million acres, up slightly from 1992. Most major producing States in the Great Plains are unchanged from 1992. Increased area in Texas offset a decline in Kansas.

Late spring planted grain harvests cut into intended seedings in several States. Weather conditions hurt others. Short soil moisture in southwest and south central Kansas curbed the over planting needed for wheat pasture. Early dryness has slowed emergence in Texas; the overall condition is below 1992. Soil replenishing August rains in Colorado were followed by a dry September - early October. This allowed seeding to progress normally. Frequent snows have provided good cover going into winter. Above normal rains, then snow cover, improved soil moisture conditions in Wyoming. Planting continues in California as weather permits.

1992 HAY STOCKS AND ROW CROP PRODUCTION

Montana farmers and ranchers had 4.0 million tons of hay on hand December 1, 1992, 13 percent less than a year earlier. The lower stocks reflect the use of supplemental feed during the spring and summer months when pasture and range conditions were meager and production was lower from the prior year. Montana's total hay production for 1992 was 4.65 million tons, a decrease of 10 percent from last year. Alfalfa hay production in 1992 was 3.29 million tons, down 12 percent from 1991. Production of all other hay was 1.36 million, down from 1.44 million last year.

Montana corn producers harvested 2.75 million bushels of corn for grain and 903,000 tons of corn silage in 1992, compared with 1.8 million bushels of grain and 1,062,000 tons of silage last year. Sugar beet growers harvested 1,272,000 tons in 1992, down 3 percent from last year. Dry bean production, at 181,000 cwt, was up 15 percent from last year.

Hay stocks on farms for the **U.S.** totaled 106 million tons on December 1, 1992, 5 percent less than the amount on hand a year earlier, but 1 percent more than the holdings on December 1, 1990. The decrease in stocks reflects in part the smaller 1992 hay crop and early hay feeding in areas where pasture conditions were poor this past fall. Disappearance of hay during the May 1, 1992, to December 1, 1992, period totaled 71.9 million tons, up 4 percent from a year earlier.

Nationally, the 1992 corn for grain production was estimated at a record high 9.48 billion bushels, 27 percent above the 1991 crop and 2 percent above the November 1 forecast. Corn silage production was estimated at 86.9 million tons, 8 percent above last year, but virtually the same as the 1990 production. Dry edible bean production was estimated at 22.0 million cwt for 1992, down 35 percent from a year earlier and 32 percent below two years ago. This is the smallest dry bean crop since 1988.

Crop acreage, grain stocks and hog and pig estimates included in this issue of the Reporter are the results of surveying over 1,800 Montana farmers and ranchers during December. Names were selected on a probability basis. A SPECIAL THANKS to those of you interviewed for this very important end- of-season survey. Only by your voluntary cooperation can those in agriculture be served with accurate, reliable statistics.

MONTANA WHEAT STOCKS DOWN 10 PERCENT

Wheat stocks in all storage positions in Montana on December 1, 1992, totaled 122 million bushels, 10 percent less than a year ago. Stocks on farms were down 9 percent at 98 million bushels. Elevator stocks, at 24 million bushels, were down 13 percent. On farm storage held 43 million bushels of winter wheat, down 9 percent and 55 million bushels of spring wheat, down 10 percent. Elevators stored 10.2 million bushels of winter wheat, down 20 percent, and 13.8 million bushels of spring wheat, down 7 percent. Durum in all storage positions totaled 6.3 million bushels, down 35 percent.

Barley in storage totaled 42 million bushels, down 31 percent from a year ago. On farm storage held 32 million bushels, down 36 percent and elevators held 10 million bushels, down 4 percent. Oats stocks totaled 4.1 million bushels, down 21 percent from a year ago.

Nationally, all wheat stored in all positions December 1, 1992, is estimated at 1.59 billion bushels, up 10 percent from December 1, 1991. On-farm stocks total 672 million bushels, up 19 percent from last December 1. Off-farm stocks are 917 million bushels, up 4 percent from last year. The September-November disappearance from all storage positions is 519 million bushels, down 13 percent from the same quarter in 1991.

Barley stored in all positions on December 1, 1992, is estimated at 348 million bushels, 6 percent above the stocks of December 1, 1991. Of the total barley stocks on hand, 198 million bushels are stored on farms, 1 percent above a year earlier. Off-farm stocks, at 150 million bushels, are 14 percent above last year. Indicated disappearance during the September-November quarter totaled 70.0 million bushels, 37 percent below the same period in 1991.

DECEMBER PRICES RECEIVED

The December 1992 index of prices received by Montana farmers and ranchers dropped 1 point from the previous month The index of prices received for all commodities was 172 percent of its January-December 1977 average. The livestock and livestock products index rose 2 points from last month and was 7 points higher than a year ago. The all crops index fell 5 points from last month, but was 10 points higher than last December.

Montana crop prices for mid-December were mostly lower from the previous month, except for prices for winter wheat, durum wheat, feed barley, and all other hay. At mid-December all wheat averaged $3.43 per bushel, down 10 cents from November. However, winter, spring, and durum wheat prices were all 13 to 45 cents higher than a year ago. All barley, at $2.64 per bushel, dropped 5 cents and malt barley fell 9 cents, but feed barley rose 2 cents from November. The all hay price, at $69.00 per ton, dropped $2 from last month, but was up $17 from the previous year. Alfalfa hay averaged $70 per ton, down $2 per ton from November, while other hay rose $5 per ton to $63 per ton.

Livestock prices at mid-December were all up from the previous month and year except for cows which dropped from the previous year. Prices for steers and heifers averaged $83.90 per cwt, up $1.50 from last month. Cow prices rose only slightly to $45.50 per cwt, while calf prices increased $3.40 per cwt to $94.00. Lamb prices showed the biggest price increase from last month with prices jumping $7.70 per cwt to $64.20. Sheep prices averaged $24.50 per cwt, up $2.60 per cwt. Hog prices rose $1.30 per cwt to $37.20.

Nationally, the All Farm Products Index of Prices Received in December was 138 based on 1977=100, 2 points (1.5 percent) above November. Price gains from November for lettuce, cattle, hogs, and soybeans more than offset price declines for oranges, milk, broilers, and peanuts.

The All Farm Products Index was 1 point (0.7 percent) above December 1991. The year-to-year index rise was driven by price increases for cattle, lettuce, tomatoes, and hogs. Price decreases for oranges, corn, milk, and eggs were partially offsetting.

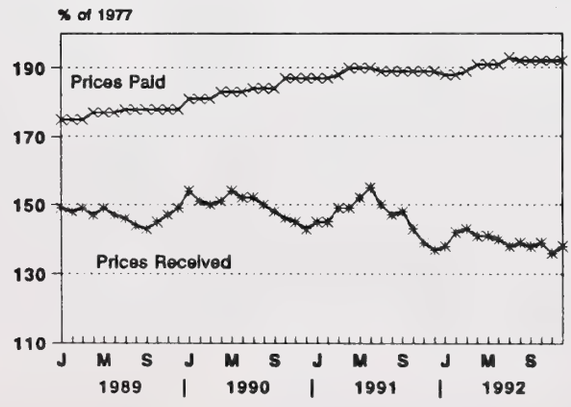
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



1992 HOGS AND PIGS INVENTORY

Montana's hog inventory on December 1, 1992 totaled 215,000 head, down 4 percent from last year. Hogs on hand for breeding, at 24,000 head, dropped 8 percent from last year, and market class hogs, at 191,000 head, declined 4 percent from December 1, 1991. The 1992 pig crop, at 385,000 head, fell 8 percent from a year ago.

U.S. inventory of all hogs and pigs on December 1, 1992, totaled 59.8 million head. This was 4 percent above December 1991, but 3 percent below the September 1, 1992, inventory.

Breeding inventory, at 7.41 million head, rose 2 percent from December 1, 1991, but virtually unchanged from September 1, 1992. Market hog inventory, at 52.4 million head, was 4 percent above December 1, 1991, but 3 percent below September 1, 1992.

The September-November 1992 U.S. pig crop was 24.7 million head, 5 percent more than 1991 and up 11 percent from the same period in 1990. Sows farrowing during this period totaled 3.07 million head, up 3 percent from last year and 8 percent above two years ago. Pigs saved per litter was a record high 8.05 for the period compared to the previous record of 7.89 during September-November 1991.

U.S. producers intend to have 3.00 million sows farrow during the December 1992-February 1993 quarter, 3 percent more than the actual farrowings during the same period last year and 10 percent above 1991. Intended farrowings for March-May 1993, at 3.40 million sows, rose 1 percent above 1992 and 3 percent above the same period in 1991.

Season's Greetings

The staff of the Montana Agricultural Statistics Service would like to take this opportunity to wish each of you a very Merry Christmas and a Happy New Year. As 1992 comes to a close, we can reflect back on how strange a year we just experienced. The year started out with some of the driest conditions we have ever seen, then the rains started in June, followed in August by snow in many areas. Despite all of these erratic weather patterns, our crops did fairly well and prices for both our crops and livestock have held relatively stable. Now we can look forward to what 1993 has in store for us. We would like to thank each of you for the important part you played in providing the basic information needed to publish Montana's agricultural statistics. May you have a prosperous and joyful new year!

PLEASE RETURN

1992 CENSUS OF AGRICULTURE

In late December, the Bureau of the Census will mail report forms for the 1992 Census of Agriculture to those farm and ranch operations which have the possibility of meeting the farm definition. These forms should be returned to the Census Bureau by February 1, 1993. Since the Montana Agricultural Statistics Service also conducts surveys at this time, farmers may question why they need to respond to both organizations.

Montana Agricultural Statistics Service produces current statistics - reported quickly - which are based on survey data. In a survey, a sampled operation represents other operations which are similar to it. In a census, every operation must be contacted and reported on, because a census requires contacting the entire farm population. A survey usually focuses on certain commodities or activities, while a census asks questions about all livestock and crop commodities. This allows a look at all facets of agricultural activity and its related characteristics.

The census figures provide long-term, in-depth trends every five years with Montana Agricultural Statistics Service survey figures filling in between censuses. When final census figures are available, Montana Agricultural Statistics Service makes use of the census figures to true up the intermediate numbers.

The Department of Commerce will issue census results for Montana in late 1993.

TRADE SURGE IN 1991/92

Poor planting conditions and drought slashed production in the Former Soviet Union (FSU) by 28 percent from 1990/91. Political and economic changes led to even further reductions in state wheat procurements, increasing FSU import needs. FSU imports rose an estimated 36 percent from 1990/91 to 21 million tons, nearly all procured with credits or through barter or donations. The United States provided nearly 37 percent of estimated total wheat imports, mostly purchased under the EEP and financed by guaranteed credit.

Despite producing 96 million tons of wheat, that nation's second largest on record, China boosted imports to an estimated 15.5 million tons in 1991/92, up two-thirds from 1990/91. Rising incomes, increasing urban demand for wheat products, low export prices in the first half of the marketing year, and relatively poor quality of the crop stimulated the sharp increase in imports.

Although total imports by North Africa fell in 1991/92 in response to larger crops, prospects of drought in several countries raised the region's imports in the last half of the marketing year. Middle Eastern imports rose as Iraq returned to the import market after the U.N. embargo on food was lifted.

East Asian imports increased 4 percent mostly because of South Korea's imports of wheat for feeding in the first half of the marketing year when wheat prices were below those of corn and other feed grains. Southeast Asian imports also grew in response to rising demand for wheat products and increased use of wheat for feed earlier in the year.

NOVEMBER PRICES RECEIVED

The November 1992 index of prices received by Montana farmers and ranchers moved down 3 points from the previous month. The index of prices received for all commodities was 170 percent of its January-December 1977 average. The livestock and livestock products index fell off 11 points and was 4 points below last year. The all crops index moved up 7 points and is 20 points above last November.

Montana commodity prices, at mid-November, were mostly higher for crops. All wheat averaged $3.59 per bushel, up 18 cents from October. All barley, at $2.48, was up 4 cents, lifted by a 9-cent increase in malting barley and only partly offset by a 1-cent decline in feed barley. The all hay price remained at $71 per ton as alfalfa averaged $72 and other hay fell $4 to average $58.

Livestock price changes were mixed with higher prices for steers, heifers, calves, and lambs but lower prices for cows, sheep and hogs. Calf prices were up $.60, steers and heifers up $1.10, and lambs advanced $1.00 per hundredweight. Cows were off $1.90, sheep were down $.50, and hogs were off $.60 per hundredweight.

Nationally, the November all farm products index of prices received, at 137 based on 1977=100, was 2 points below October. Price declines from October for cattle, tomatoes, grapefruit, and lettuce more than offset price gains for wheat, eggs, strawberries, and oranges.

The all farm products index was also 2 points below November 1991. The year-to-year index decline was driven by price decreases from November 1991 for corn, milk, lettuce, and oranges. Price increases for cattle, tomatoes, hogs, and broilers were partially offsetting.

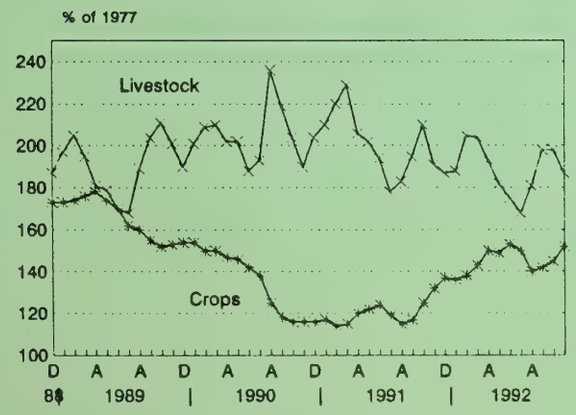
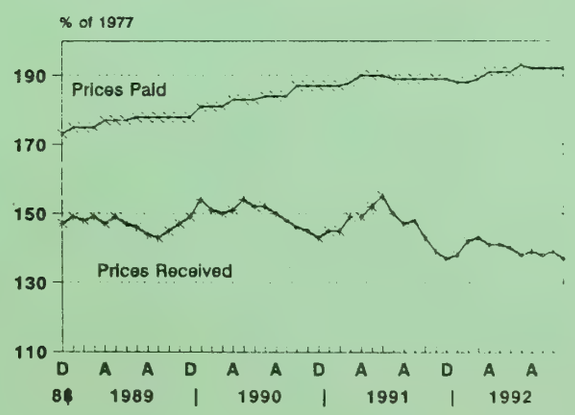
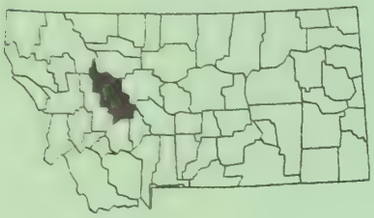
MONTANA CROP & LIVESTOCK PRICES RECEIVED INDEXES



UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



featuring...*LEWIS & CLARK COUNTY*



The area now known as Lewis and Clark County attracted its first settlers with its rich placer gold deposits. Located in west central Montana, the county occupies 2,215,232 acres of land. The Sun River comprises the northern boundary of the county and a chain of bodies of water, including: a portion of the Missouri River, Holter Lake, Lake Helena, Hauser Lake, and part of Canyon Ferry Lake, traverse the eastern section of the county from north to south. Nearly half of the county is blanketed by portions of the Helena and Flathead National Forests. The Continental Divide of the Rocky Mountains runs down the center of Lewis and Clark County.

When the gold strikes in the county played out, livestock raising and agriculture began to come into their own as an industry. In the January 1, 1992 livestock inventory, Lewis and Clark County ranked 24th in sheep numbers and 31st in cattle numbers. The December 1, 1991 hog inventory shows the county in 39th place.

Of the wheat producing counties, Lewis & Clark ranked 23rd for all wheat in 1991 production. The county ranked 10th for all hay production, 25th for barley, 27th for winter wheat, and 18th for oats production. Livestock and livestock products in Lewis and Clark brought in receipts of $14,907,000 and a rank of 29th in 1990. Crops added $6,736,000 for 31st place in the county rankings, while government payments contributed $1,084,000 for a total cash receipt return of $22,727,000 and a rank of 37th among Montana counties in 1990.

Lewis and Clark County is home to Montana's historic capital city, Helena, which is also the county seat. This area has an annual average precipitation of 11.37 inches and an average of 134 frost-free days.

OCTOBER RED MEAT PRODUCTION

Montana slaughter plants produced 1.6 million pounds of red meat in October 1992. This was a 7 percent increase from September, and a 2 percent increase from last year.

The number of cattle slaughtered, at 1,800 head, remained unchanged from October 1991. Average live weight of cattle slaughtered increased 7 pounds to 1,157.

A total of 2,500 hogs were slaughtered, 100 head less than a year ago. Average live weight increased 4 pounds to 239. Sheep and lamb slaughter, at 400 head, was unchanged from last year. Average live weight at 122 pounds was 1 pound lighter than the average in October 1991.

Commercial red meat production during October for the United States totaled 3.66 billion pounds, 1 percent below a year earlier. Beef production totaled 2.01 billion pounds. This was down 5 percent from a year earlier. Head kill totaled 2.86 million, down 2 percent. The average live weight decreased 15 pounds to 1,180. Veal production, at 24.0 million pounds, was down 11 percent. Calf slaughter totaled 114,500 head, down 12 percent. The average live weight increased 12 pounds to 370.

Pork production, at 1.59 billion pounds, was up 3 percent from a year earlier. This surpassed the previous October record of 1.55 billion pounds set in 1979. This is the fifth consecutive month pork production has set a record level for the month. Hog kill totaled 8.79 million head, up 3 percent from last year and the largest head kill since October 1979 when 9.10 million head were slaughtered. The average live weight decreased 1 pound to 251.

Lamb and mutton production, at 29.0 million pounds, was down 9 percent from last year. Slaughter totaled 469,900 head, down 10 percent. The average live weight was up 2 pounds to 124.

January-October red meat production was 34.1 billion pounds, up 4 percent from the comparable period a year earlier. Accumulated beef production was up 1 percent, veal was up 3 percent, pork was up 9 percent, but lamb and mutton was down 3 percent.

CATTLE ON FEED UP 7 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed November 1 for slaughter market in the 7 States preparing monthly estimates totaled 8.53 million head, up 7 percent from a year ago but down 2 percent from November 1, 1990.

Placements of cattle and calves on feed in the 7 States during October totaled 2.61 million, up 3 percent from last year but 4 percent below 1990. Net placements of 2.53 million for October were up 3 percent from last year but 4 percent below 1990.

Marketings of fed cattle during October totaled 1.49 million, down 10 percent from last year and 7 percent below two years ago. This is the smallest October marketings since 1981.

Other disappearance totaled 76,000 head compared to 77,000 in October 1991 and 87,000 in October 1990.

OCTOBER WAGE RATES INCREASE

There were 3.25 million people working on the Nation's farms and ranches during the week of October 11-17, 1992. Self-employed farm operators accounted for 1.57 million of the total, along with 484,000 unpaid workers, and 892,000 workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 295,000 workers.

Farm operators paid their hired workers an average wage of $6.09 per hour during the October 1992 survey week. This rate was up 21 cents from a year earlier. Workers paid on an hourly basis earned $5.83 per hour compared with $5.70 last October. Field workers received an average of $5.74 per hour, up 7 cents from the October 1991 survey week. Livestock workers earned $5.57 per hour compared with $5.32 a year earlier. Benefits, such as housing and meals were provided to 39 percent of the hired workers during the survey week, compared to 37 percent in October 1991.

Farm operators in the Mountain I region, which includes Montana, Idaho, and Wyoming, paid their hired workers an average wage of $5.21 per hour during the October 1992 survey week, down 2 percent from a year ago. Field workers were paid $5.38, 27 cents more than last year, while livestock workers earned $5.10, 33 cents more than wages of October 1991.

OCTOBER MILK PRODUCTION

Milk production in the 21 major States during October totaled 10.6 billion pounds, 3 percent more than production in these same States in October 1991. September revised production at 10.3 billion pounds was 4 percent above September 1991. Production per cow in the 21 major States averaged 1,279 pounds for October, 55 pounds more than October 1991.

The number of cows on farms in the 21 major States was 8.25 million head, 98,000 head less than October 1991 and was 6,000 less than September 1992.

During the July-September period, the 21 major States produced 32.0 billion pounds of milk, 84.9 percent of the U.S. production. If producers in the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 12.4 billion pounds for October 1992.

OCTOBER EGG PRODUCTION UP 2 PERCENT

The Nation's laying flocks produced 6.02 billion eggs during October 1992, up 2 percent from the 5.90 billion eggs produced a year ago. Production included 5.21 billion table eggs, 750 million broiler-type hatching eggs, and 62.0 million egg-type hatching eggs. The average number of layers during October was 280 million, up 2 percent from the 276 million head a year ago. The October 1992 egg production averaged 2,150 eggs per 100 layers, compared with 2,139 eggs per 100 layers in October 1991.

All layers in the U.S. on November 1, 1992, totaled 280 million, compared with 277 million a year ago. The 280 million layers consisted of 237 million layers producing table or commercial type eggs, 40.3 million layers producing broiler-type hatching eggs, and 2.86 million layers producing egg-type hatching eggs. Rate of lay per day on November 1, 1992, averaged 69.9 eggs per 100 layers, up 1 percent from last year's 69.3 eggs per 100 layers.

Laying flocks in the 20 major egg production States produced 4.93 billion eggs during October 1992, up 2 percent from the 4.85 billion produced a year ago. The number of layers during October averaged 229 million, up 1 percent from the 227 million a year ago. These monthly States accounted for about 82 percent of the U.S. egg production and layer numbers during the 3-month period, June through August 1992.

DRY EDIBLE BEANS GET A SECOND GLANCE

At a time when health concerns, convenience, and environmental issues are exerting a greater influence on consumers' food choices, dry edible beans are getting a second look from both consumers and producers. The legumes are useful in sustainable production practices making them attractive to farmers considering crop rotations. For consumers, dry beans offer low cost, nutritional content, versatility, and convenience.

The U.S. produces over a dozen varieties of dry edible beans, but a few favorites account for most of the U.S. dry beans output. These are pinto (41% of 1989-91 output), navy beans (21%), Great Northern (8%), and red kidney (7%). Other varieties include large lima, baby lima, small white, pink, small red, cranberry, black, blackeye (also called cowpeas), and garbanzo (also called chickpeas).

Relatively inexpensive, dry beans are an excellent source of vitamins, minerals, soluble dietary fiber, and protein. The leading source of vegetable protein, dry edible beans are among the best food buys in terms of cost per gram of protein. They contain no cholesterol, and research suggests that regular consumption of beans may help lower blood cholesterol levels. Dry beans are also rich in B-vitamins, iron, calcium, potassium, and phosphorous, and very low in sodium and calories.

Concern for nutrition is just one factor boosting dry bean consumption. Along with the rising popularity of restaurant chains specializing in Mexican and East Indian cuisine, interest over the past decade in ethnic foods featuring dry edible beans is also bringing beans back into the American culinary mainstream.

Dry edible bean use peaked during World War II at 11 pounds per person, then began a steady decline. Since bottoming out in the early 1980's, per capita consumption has increased 15%. From 1980 to 1984, dry beans use averaged 5.9 pounds per person. Over the next 5 years (1985-89), average use increased 7% to 6.3 pounds. The last 3 years (1990-92) saw an 8% gain over the 1985-89 period, to 6.8 pounds.

Dry edible beans have a wide range of uses, and some varieties can be substituted for others. All varieties are available dry in consumer or foodservice packages. Some varieties are also processed into canned products such as refried beans, soups, and baked beans. High starch bean flour is produced from dry beans and used in a variety of baked goods. Restaurant use of dry beans and bean products appears to have increased during the past 10 years, especially among restaurants featuring dishes such as tacos, burritos, and chili.

END-OF-YEAR SURVEYS UNDERWAY

The Montana Agricultural Statistics Service began contacting farmers and ranchers across the state in early November for final 1992 acreage, yield, and production totals and end-of-year livestock and poultry inventories.

Insects and variable weather conditions this year have again had an impact on Montana agriculture, and these surveys will help our office summarize where the industry stands at the end of 1992.

Information from these confidential surveys conducted by mail, telephone, or in person will also help producers make their plans for the coming year. Sound production and marketing decisions require good, reliable information and advanced planning. These reports provide producers with solid facts and figures they can incorporate into their plans.

If you are contacted, it is important to provide the requested information, since one producer represents similar operations of the same type and size. Our estimates can be no better than the numbers producers provide.

Lake County is located in the northwestern section of Montana. The upper portion of the county is occupied by beautiful Flathead Lake. The lake is about thirty miles long, and from five to ten miles in width with a rugged, wooded shoreline. Outside of the Great Lakes System, Flathead Lake is one of the largest inland lakes in the United States, and is famous for the abundant cherry crop grown along its shore. The rest of Lake County is comprised almost entirely of the Flathead Indian Reservation. The Flathead is the main valley, it lies between the Mission Mountains on the east and the Little Bitterroot Mountains on the west. The outlet of Flathead Lake, the Flathead River, traverses the center of the county and runs along the southwestern border of Lake and Sanders counties.

Livestock production is the main industry in Lake County, ranking 20th in hog numbers on December 1, 1991 and 19th in cattle inventory on January 1, 1992. Sheep numbers brought a rank of 31st to Lake County for the January 1, 1992 inventory.

Crop production is also a major agricultural concern in Lake County. All hay production brought the county a ranking of 5th, with oats production ranking 12th in 1991. Lake County is one of the major potato producing areas in the state. Barley, spring wheat, and winter wheat are also grown in the area.

Cash receipts for livestock and livestock products totaled $22.2 million dollars in 1990, while crops added $15.1 million with rankings of 15th and 19th, respectively. Government payments came to $1.3 million for a total cash return of $38.6 million and a ranking of 23rd for Lake County in 1990.

MONTANA MALTING BARLEY FOR MALT-1991 CROP

Maltsters and brewers purchased 14.3 million bushels of Montana's 1991 barley crop to make malt. This was 15 percent more than 1990 and 43 percent more than 1989. The 1991 malt barley utilization represented 17 percent of the total 1991 barley crop compared with 22 percent in 1990 and 15 percent in 1989.

Montana growers planted 1.8 million acres of barley in 1991. Of the total, about 781 thousand acres were planted to malting varieties. If the yield of malting varieties equaled the state average yield per planted acre for all barley then approximately 37.2 million bushels of malting type barley would be produced. Since 14.3 million bushels were used for malt the remaining 22.9 million bushels either did not make the malting grade or exceeded the demand for malting barley.

The average protein of the 1991 malting barley purchases was 12.3 percent. This is .6 lower than the 12.9 percent last year and .7 lower than the 13 percent of 1989.

[1] Crop year defined as July 1 to June 30. [2] Includes Northwest.

NOVEMBER 1 PASTURE & RANGE FEED CONDITION

Montana's pasture and range feed condition rating on November 1, at 79 percent, was 1 point lower than the October rating and 4 points below November last year. Conditions declined from October in all areas, except the north central and south central districts which improved from last month. Grazing was mostly open during October. Movement of livestock from summer ranges was completed about on schedule with little supplemental feeding necessary.

Montana	67	83	79

THE 1992 CROP YEAR

The 1992 crop season was a season of contrast. Yields for most crops were down from last year's record or near-record levels. However, the season turned out much better than early indications suggested.

Montana producers had planted 95 percent or more of spring crops by May 17. Most areas reported very dry soils. Thirty-one out of 45 weather reporting stations showed less than 100 percent of normal precipitation accumulated from April 1 to May 16. The major small grain region was most severely affected with April 1-May 16 accumulated moisture ranging from 21 percent to 52 percent of normal. The moisture situation had not improved very much by June 13. Winter wheat was more than 50 percent headed and the soil moisture was rated short in 82 percent of the state.

The week ending June 21 marked a sharp turn around in moisture. Nearly all weather reporting stations showed more than .5 inch of rain, several recorded more than 2 inches, and one station recorded more than 5.5 inches. Top soil moisture was rated short in only 24 percent of the state. Winter wheat was 69 percent headed and 2 percent turning color. Spring wheat was 23 percent headed, while barley was 28 percent headed. The week of June 28-July 4 was mostly dry. Substantial rains returned for 10 days in early July and in reduced amounts for the remainder of the month. This caused a lot of regrowth and uneven maturity, but yield prospects improved a great deal.

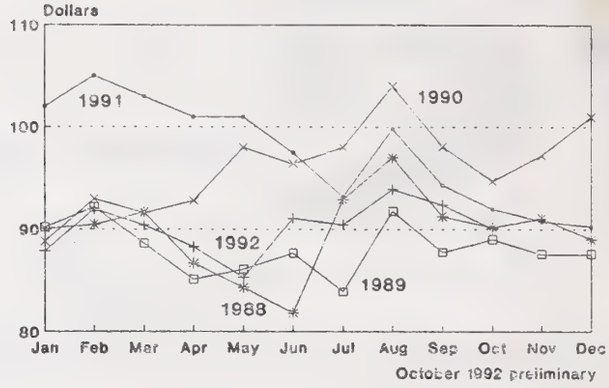
Winter wheat harvest was impeded by showers, green weeds and immature crop. By the week ending August 9, only 10 percent of the crop had been harvested, compared with an average of 58 percent. Spring planted crops were also slow to reach maturity and harvest was much behind schedule. By the end of August, only 32 percent of spring wheat had been harvested compared with the average of 76 percent. The north central region, which had been hard hit by the early season drought was now dealt another blow as 8 inches of snow blanketed many unharvested fields as an unusually early snow and cold weather system arrived.

Winter wheat harvest extended to the end of September, with the spring wheat harvest at 85 percent complete by the end of the month compared with a normal of 98 percent. Winter wheat seeding for the 1993 crop was on schedule and went into soils with mostly good moisture or received moisture shortly after seeding.

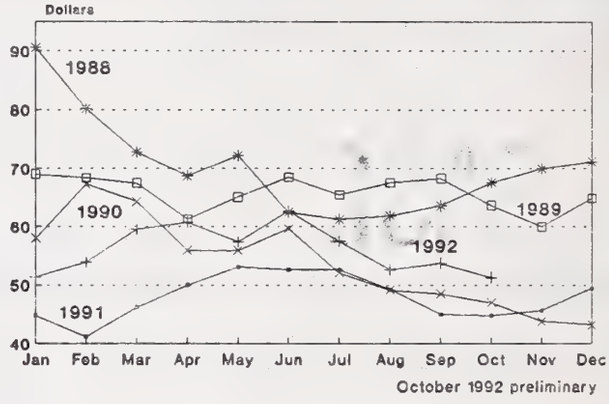
MONTANA CALF, LAMB, ALL WHEAT & BARLEY PRICES RECEIVED CHARTS

The following charts of monthly prices received from 1988 through October 1992 provide a quick reference of changes during the years. This year's prices are in the mid range of those received during the last five years.

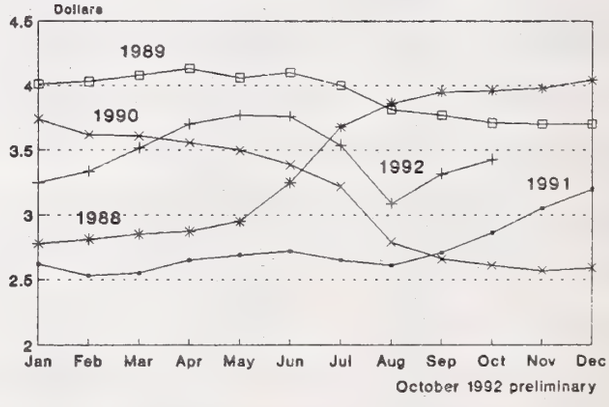
Calf Prices Received
By Montana Farmers 1988-1992



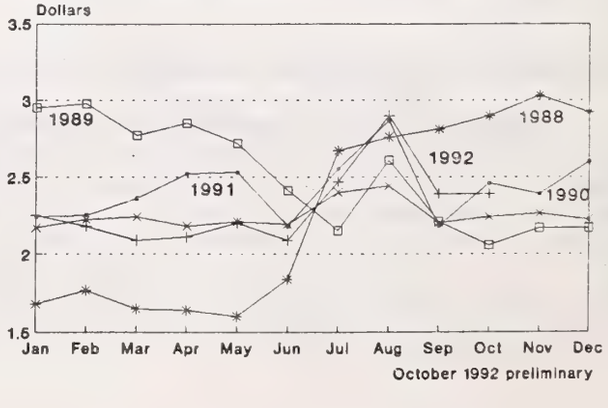
Lamb Prices Received
By Montana Farmers 1988-1992



All Wheat Prices Received
By Montana Farmers 1988-1992



Barley Prices Received
By Montana Farmers 1988-1992



OCTOBER PRICES RECEIVED

The mid-October 1992 All Farm Products Index of Prices Received by Montana farmers and ranchers moved up 3 points from the whole month of September. The index for all commodities, at 174 percent of its 1977 base, was 4 points higher than October 1991.

The mid-October all wheat price averaged $3.43, up 11 cents per bushel from September and 57 cents above October a year ago. Barley was $2.39 per bushel, the same as last month but 7 cents below the previous year. Oats, at $1.18 per bushel, were down 5 cents from September and 2 cents below October 1991. Alfalfa hay increased $1.00 per ton to $72.00, $20.00 higher than October 1991.

The all livestock index, at 202, was 4 points higher than September but 8 points lower than a year earlier. Cow prices, at $47.20 per cwt, were the same as last month, but $1.10 below a year ago. Calves, at $90.10 were down $2.30 from September and $1.90 less than a year ago. Steer and heifer prices decreased $1.00 to $77.60 per cwt, $6.80 less than October 1991. Sheep, at $18.80 per cwt, were down $1.90 from September, while lambs were down $2.40 to $51.30 per cwt.

Nationally, the October All Farm Products Index of Prices Received was unchanged from September, at 138, based on 1977=100. Price increases for wheat, grapefruit, oranges, and tomatoes offset declines for corn, apples, lettuce, and lemons. The All Farm Products Index was 4 points (2.8 percent) below October 1991. The year-to-year index decline continues to be driven primarily by the extreme change in orange prices from record high levels in 1991. Without the influence of orange prices, the All Farm Products Index would have been 1 point higher than a year ago.

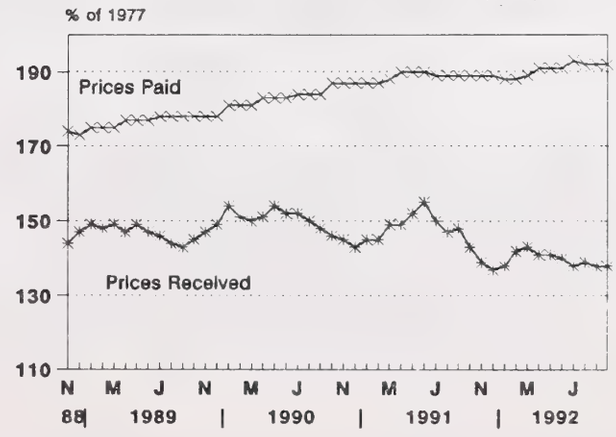
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



U.S. AND MONTANA CROP HIGHLIGHTS

Favorable conditions early in October allowed winter wheat seeding to progress unhindered in most areas of the nation. By mid-month, planting in the Southeast, Oklahoma, and Texas were behind average. The rest of the month saw the Pacific Northwest and Northern Plains progressing ahead of average, but behind elsewhere. As of November 1, progress in the 19 major States had reached 90 percent, off a point from the 5-year average. Condition ratings averaged fair to mostly good.

Nationally, production of corn for grain is forecast at 9.33 billion bushels, up 4 percent from last month and 25 percent above the 1991 crop. If realized, this would be the largest corn crop ever produced. The U.S. average yield per acre is forecast at a record high 129.3 bushels, up 5.5 bushels from last month and 20.7 bushels above the 1991 average yield. The increase in yields resulted from record high ear counts in most States and near normal grain weights per ear. Corn harvest continued well behind normal, as only 44 percent of the crop had been harvested in the 17 major producing States by the first of November. Last year 92 percent had been harvested by that date.

Montana producers harvested 2.64 million cwt of **fall potatoes**, 5 percent less than last year's output, but 6 percent more than the 1990 crop. Production of **U.S.** fall potatoes in 1992 is forecast at 364 million cwt, 2 percent less than last year but 3 percent more than two years ago.

This includes 2.30 million cwt from New Mexico that had formerly been included in summer potatoes. Without New Mexico, production would be 3 percent below last year. Area harvested, at 1.12 million acres, is down 5 percent from last year and 4 percent below 1990. The yield per acre is forecast at a record high 325 cwt, a gain of 9 cwt over a year ago and 23 cwt more than two years ago. The nine Western States production is forecast at 243 million cwt of potatoes in 1992, down 5 percent from last year and 1 percent below two years ago.

Dry bean growers produced 172,000 cwt in **Montana** in 1992 compared with 158,000 cwt last year. The 1992 **U.S.** crop of dry beans is forecast at 22.0 million cwt, 2 percent below the October 1 forecast and 33 percent below last year.

The November 1 **sugar beet** production forecast for **Montana** is 1,267,000 tons, down from 1,312,000 tons in 1991. **Nationally** sugar beet production of 29.1 million tons is 2 percent below the October 1 forecast, but 4 percent above last year's output. With harvest complete over many areas, yields were lower than previously expected. However, with the U.S. average at 20.6 tons per acre, yields will average 0.4 ton above last year.

SEPTEMBER RED MEAT PRODUCTION

Montana slaughter plants produced 1.5 million pounds of red meat in September 1992. This was a 12 percent decrease from last month, but was 7 percent higher than production last year. The number of cattle slaughtered in the state totaled 1,600 head, 100 head more than in 1991. Average live weight of cattle slaughtered increased 12 pounds to 1,153 pounds.

A total of 2,700 hogs were slaughtered, 300 more than a year ago. Average live weight of hogs slaughtered was 236 pounds, 4 pounds less than in 1991. Sheep and lamb slaughter, at 500 head, decreased 100 head from last year. Average live weight of sheep and lambs slaughtered increased 5 pounds to 119.

Commercial red meat production for the **United States** totaled 3.56 billion pounds. This production is 8 percent above a year earlier and 3 percent above the previous September record of 3.47 billion pounds set in 1976.

Beef production totaled 2.00 billion pounds. This was up 3 percent from a year earlier. Head kill totaled 2.81 million, up 4 percent. The average live weight increased 1 pound to 1,183. Veal production, at 23.0 million pounds, was down 2 percent. Calf slaughter totaled 110,300 head, down 7 percent. The average live weight increased 27 pounds to 368.

Pork production, at 1.51 billion pounds, was up 15 percent from a year earlier. This surpassed the previous September record of 1.36 billion pounds set in 1988. Hog kill totaled 8.41 million head, up 14 percent from last year. The average live weight remained the same at 251. Lamb and mutton production, at 30.0 million pounds, was up 4 percent from last year. Slaughter totaled 489,200 head, up 3 percent. The average live weight was up 3 pounds to 122.

January-September red meat production was 30.4 billion pounds, up 5 percent from the comparable period a year earlier. Accumulated beef production was up 1 percent, veal was up 5 percent, pork was up 10 percent, but lamb and mutton was down 3 percent.

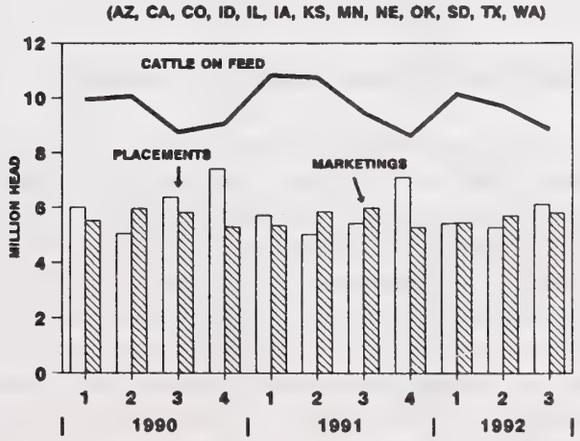
CATTLE ON FEED UP 3 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed for slaughter market on October 1, 1992, in the 13 States preparing quarterly estimates totaled 8.92 million head, up 3 percent from a year ago but 2 percent below October 1, 1990. The inventory included 5.92 million steers and steer calves, 4 percent above a year ago. This group accounts for 66.4 percent of the total inventory. Heifers and heifer calves accounted for 2.92 million head, 2 percent above 1991.

Placements of cattle and calves on feed in the 13 States during the July-September 1992 quarter totaled 6.11 million, up 13 percent from last year but 4 percent below July-September 1990. **Net placements** of 5.84 million for July-September were up 14 percent from last year but down 4 percent from 1990.

Marketings of fed cattle during the July-September 1992 quarter totaled 5.77 million, down 3 percent from last year and 1 percent below two years ago. **Other disappearance** totaled 268,000 head compared to 282,000 in July-September 1991 and 261,000 in July-September 1990. Cattle feeders **expect to market** 5.23 million head during the October-December quarter of 1992. This would be down 1 percent from the last quarter marketings in both 1991 and 1990.

CATTLE ON FEED, PLACEMENTS, MARKETINGS
BY QUARTERS FOR 13 STATES
(AZ, CA, CO, ID, IL, IA, KS, MN, NE, OK, SD, TX, WA)



QUARTERLY MILK PRODUCTION

Montana dairymen produced 86 million pounds of milk in the July-September quarter of 1992, 1 million pounds less than production from the same quarter last year. The average number of milk cows on farms remained unchanged from 1991 at 24,000 head.

Producers fed an average of 16.5 pounds of grain and other concentrates per cow on October 1, 1992, one-half pound more than the average last year. The value of grain and concentrates fed was $7.15 per cwt, up 15 cents from 1991.

The quarterly production of milk for the United States was 37.7 billion pounds, 4 percent above the July-September period last year. The average number of milk cows in the U.S. during the July-September quarter was 9.85 million head, 94 thousand less than the same period last year.

Grain and other concentrates fed to milk cows on October 1, 1992, averaged 17.4 pounds per cow, 1 tenth of a pound more than on October 1, 1991. The value of grain and other concentrates fed to cows on October 1, averaged $7.65 per hundredweight, $0.15 less than the October 1, 1991 price.

SEPTEMBER EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 5.75 billion during September 1992, up 2 percent from the 5.65 billion eggs produced a year ago. Production included 4.96 billion table eggs, 728 million broiler-type hatching eggs, and 60.0 million egg-type hatching eggs. The average number of layers during September was 277 million, up 1 percent from the 274 million a year ago. September 1992 egg production averaged 2,077 eggs per 100 layers, compared with 2,065 eggs per 100 layers in September 1991.

All layers in the U.S. on October 1, 1992, totaled 280 million, compared with 275 million a year ago. The 280 million layers consisted of 237 million layers producing table or commercial type eggs, 40.0 million layers producing broiler-type hatching eggs, and 2.78 million layers producing egg-type hatching eggs. Rate of lay per day on October 1, 1992, averaged 68.6 eggs per 100 layers, the same as last year.

Laying flocks in the 20 major egg production States produced 4.70 billion eggs during September 1992, up 1 percent from the 4.67 billion produced a year ago. The number of layers during September averaged 226 million, up slightly from the 225 million a year ago. These monthly States accounted for about 82 percent of the U.S. egg production and layer numbers during the 3-month period, June through August 1992.

UNITED STATES CROPLAND ACRES UP

Cropland used for crops in the United States is estimated to be 343 million acres up 6 percent from 1991, but down 44 million from the 1981 peak when no land was idled in Federal programs. The increase is due to land previously idled under some Federal programs being returned to production.

Based on preliminary enrollment data, about 53.7 million acres were idled this year under Federal programs in the United States. This is down 11 million acres from 1991 and down nearly 24 million from the 1988 peak of 78 million. Annual programs account for approximately one-third of the idled acres with the balance being acres enrolled in CRP. Total acres enrolled in CRP amounted to 35.4 million cropland acres with 1 million being enrolled in 1992 and 1.1 million acres tentatively accepted for retirement in 1993.

Farmers continue to use new planting flexibility provisions, first offered in 1991, which allow farmers to produce alternative crops and still maintain their full acreage base for participation in future programs. Of the 41 million base acres in the U.S. that could have been planted to another crop this year, producers flexed 8.3 million acres, of which 5.9 million were planted to soybeans and other nonprogram crops.

featuring...JUDITH BASIN COUNTY

Created in December of 1920, Judith Basin County occupies 1,197,260 acres of central Montana. The Judith River traverses the lower portion of the county, and the southwestern corner is blanketed by a section of the Lewis and Clark National Forest. Included in the county's boundaries is the great Judith Basin, recognized as one of the better non-irrigated districts in the state.

Winter wheat, barley, oats, and alfalfa hay are the major crops grown in Judith Basin County. The county ranked 12th for winter wheat and barley production, 17th for oats, and 37th for spring wheat production in 1991.

Crops brought in $15,668,000, 40 percent of the total cash receipts for the county in 1990. Livestock and livestock products made up 50 percent of the total, or $19,652,000. Government payments contributed the remaining 10 percent with $3,983,000 for a total cash receipt figure of $39,303,000 for 1990.

In the January 1, 1992, livestock inventory, Judith Basin County ranked 15th in the state for all cattle numbers and 17th for sheep. The December 1, 1991, hog inventory showed Judith Basin ranking 34th in the hog producing counties.

OCTOBER 1 CROP PRODUCTION ESTIMATE

The October 1 production estimate for Montana's 1992 **wheat** crop, at 139.6 million bushels, is up 2 percent from the September 1 forecast. With more than 90 percent of the spring wheat acres harvested it now appears that about 2 percent more acres will be harvested than was earlier expected. Average yield remained at 30 bushels per acre for spring wheat. Production is estimated at 73.5 million bushels, 2 percent more than the September forecast. Winter wheat yield averaged 29 bushels, up 2 from the previous forecast, but that was based on fewer harvested acres. The resulting production totals 60.9 million bushels, only slightly higher than last month's forecast. Durum production is 12 percent below last year. All wheat production is expected to be 12 percent smaller than the 1991 crop.

Montana's **barley** production estimate is unchanged from September 1 at 52.8 million bushels. This is 38 percent below last year. Harvested acreage is expected to be down 27 percent and yield off 8 bushels per acre. **Oats** production, at 3.9 million bushels, is 4 percent above the previous forecast, but 35 percent below last year. **Hay** production, at 4.7 million tons, is 1 percent below the September forecast and 10 percent below last year's record production. **Sugar beet** production is unchanged from last month at 1.283 million tons, 2 percent below last year.

U.S. **all wheat** production for 1992 was estimated at 2.46 billion bushels, up 2 percent from September 1 and up 24 percent from 1991. Yields averaged 39.4 bushels per acre, equaling the second highest average on record. The estimated yield was up 1.2 bushels from September 1 and was 5.1 bushels per acre better than last year. Area harvested for grain was 62.4 million acres, off 1 percent from the last forecast, but 8 percent above a year ago.

The 1992 **winter wheat** crop was estimated at 1.61 billion bushels, up slightly from August 1 and 17 percent higher than the 1991 production. The U.S. average yield was 38.3 bushels per acre, up 0.7 bushels from the August forecast and 3.5 bushels per acre better than last year. Area harvested for grain was placed at 41.9 million acres, off 2 percent from the last forecast but up 6 percent from 1991.

Production of the 1992 **other spring** wheat crop was estimated to total a record high 755 million bushels, up 5 percent from the September 1 forecast and 50 percent more than the 1991 production. The largest harvested area since 1953, coupled with a record high yield, contributed to the dramatic jump in this year's production. The previous high production was the 1990 crop of 583 million bushels. Yields averaged 41.8 bushels per acre, 5.1 bushels better than the previous record high of 1990 and a 2.1 bushel increase from September 1. Harvested area was essentially unchanged from the last forecast. **Durum** production in 1992 was estimated at 97.2 million bushels, up 11 percent from the September forecast but down 7 percent from 1991. Harvested area was 2.45 million acres, up 1 percent from September 1 but off 23 percent from last year. This was the lowest harvested area since 1970. The average yield was 39.7 bushels per acre, a record high. This yield was 3.3 bushels per acre better than the previous record high 1985 crop average and up 3.4 bushels per acre from last month.

Barley production in 1992 was estimated at 456 million bushels, 2 percent below last year's crop of 464 million bushels. Average yield per acre, at 62.4 bushels, was up 7.2 bushels from the 1991 crop. The area harvested for grain was estimated at 7.31 million acres, 13 percent less than last year. Seeded area totaled 7.80 million acres, down 13 percent from 1991. Production was 6 percent above the September 1 forecast. A slight increase in harvested acreage coupled with a 3.5 bushels increase in yield, caused the increased production.

Production of **corn** for grain is forecast at 8.94 billion bushels, up 2 percent from last month and 20 percent above the 1991 crop. If realized, this would be the largest corn crop ever produced. The U.S. average yield per acre is forecast at a record high 123.8 bushels, up 2.4 bushels from last month and 15.2 bushels above the 1991 average yield. By October 4, the corn harvest was progressing well behind normal, as only 11 percent of the crop had been harvested.

OCTOBER 1 PASTURE & RANGE FEED CONDITION

October 1 Montana pasture and range feed condition improved 2 points compared with a month ago. Conditions declined in the Northeast and South Central districts. The North Central district still has poorest conditions at 59 percent of normal. Compared with a year ago the October condition is down 4 points.

SEPTEMBER AG PRICES RECEIVED

The September 1992 index of prices received by Montana farmers and ranchers moved up 15 points from the previous month. The index of prices received for all commodities, at 176 percent of its January-December 1977, average was most influenced by a 22 point increase in the livestock and livestock products index. The all crops index also advanced but showed only a 5 point increase over August. Compared with last year the all crops index is up 28 points, and the livestock index is up 8 points.

Montana commodity prices were up for all crops except feed barley and other hay. September all wheat averaged $3.23 per bushel, up 14 cents from August. All barley, at $2.94, was up 4 cents--lifted by a 7 cent increase in malting barley and only partly off set by a 6 cent decline in feed barley. The all hay price remained at $70 per ton as alfalfa averaged $71 and other hay fell $8 to average $56.

Livestock prices were higher except for slaughter cows, sheep and hogs. Calf prices were at the $100 per hundredweight mark for the first time since May 1991. Steer and heifer prices were up $4.50. Cows were off $1.70; sheep were down $.30; and hogs dropped $2.70 per hundredweight.

The September All Farm Products Index of Prices Received by U.S. farmers was unchanged from August at 139 based on 1977=100. Price decreases for hogs, potatoes, broilers, and onions offset increases for eggs, tobacco, wheat, and tomatoes. The All Farm Products Index was 8 points below September 1991.

The year-to-year index decline was driven primarily by the extreme change in orange prices from record high levels in 1991. Otherwise, price increases from a year ago for cattle, milk, lettuce, and wheat more than offset price decreases for hogs, cotton, corn, and lemons. Without the influence of orange prices, the All Farm Products Index would have been two points higher than a year ago.

CATTLE ON FEED DOWN 1 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 6.97 million head, down 1 percent from a year ago and down fractionally from September 1, 1990.

Placements of cattle and calves on feed in the 7 States during August totaled 1.64 million, up 12 percent from last year but 6 percent below 1990. **Net placements** of 1.56 million for August were also up 12 percent from last year but 6 percent below 1990.

Marketings of fed cattle during August totaled 1.59 million, down 7 percent from last year and 6 percent below two years ago. This is the lowest August marketings since 1981. **Other disappearance** totaled 81,000 head compared to 67,000 in August 1991 and 82,000 in August 1990.

CATTLE ON FEED

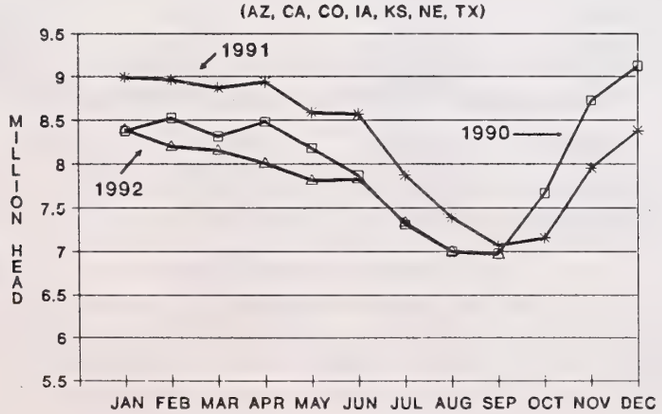
(AZ, CA, CO, IA, KS, NE, TX)



AUGUST RED MEAT PRODUCTION

Montana slaughter plants produced 1.7 million pounds of red meat in August 1992. This was a 22 percent increase from July, but a 2 percent decrease from a year ago. The number of cattle slaughtered in the state totaled 1,700 head, a 200 head decrease from last year. Average live weight of cattle slaughtered increased 62 pounds to 1,224 pounds.

A total of 3,100 hogs were slaughtered, 400 more than in 1991. Average live weight of hogs slaughtered was 239 pounds, 1 pound more than in August 1991. Sheep and lamb slaughter, at 600 head, decreased 200 head from last year. Average live weight of sheep and lambs slaughtered increased 2 pounds to 123 pounds.

Commercial red meat production for the United States totaled 3.41 billion pounds, 1 percent below a year earlier. Beef production totaled 1.98 billion pounds. This was down 5 percent from a year earlier. Head kill totaled 2.78 million, down 4 percent. The average live weight increased 2 pounds to 1,178.

Veal production, at 24.0 million pounds, was up 8 percent. Calf slaughter totaled 110,000 head, down 2 percent. The average live weight increased 35 pounds to 371. Pork production, at 1.38 billion pounds, was up 6 percent from a 1991. This surpassed the previous August record of 1.35 billion pounds set in 1979. Hog kill totaled 7.68 million head, up 6 percent from last year. The average live weight was down 1 pound to 249.

Lamb and mutton production, at 25.0 million pounds, was down 8 percent from last year. Slaughter totaled 418,300 head, down 9 percent. The average live weight was up 3 pounds to 122.

January-August red meat production was 26.8 billion pounds, up 4 percent from the comparable period a year earlier. Accumulated beef production was up 1 percent, veal was up 6 percent, pork was up 9 percent, but lamb and mutton was down 3 percent.

SEPTEMBER 1 GRAIN STOCKS

Montana wheat stocks on September 1, 1992 totaled 148 million bushels, 19 percent less than a year ago. All wheat stored on farms totaled 130 million bushels, down 13 percent from last year, while off-farm storage held 18 million, down 46 percent.

Winter wheat stocks, at 65.8 million bushels, were down 25 percent from September 1991, while all spring wheat stocks, at 82.2 million bushels, were down 14 percent. Durum stocks, at 6.7 million bushels, were 39 percent less than last year.

Barley stocks on September 1 were 45.8 million bushels, 38 percent less than a year ago. On-farm storage held 39.0 million bushels, down 40 percent, while off-farm stocks, at 6.8 million, were down 18 percent. Oats stocks, at 4.7 million bushels, were 10 percent less than year. On-farm storage totaled 4.5 million bushels.

U.S. all wheat stocks on hand September 1, 1992, are estimated at 2.09 billion bushels, up 2 percent from last September 1. Of the total, 967 million bushels are stored on farms, 17 percent more than last year. Off-farm stocks, at 1.12 billion bushels, are down 7 percent from a year ago.

Durum wheat stored on September 1, 1992, totaled 111 million bushels, off 13 percent from September 1991. Stocks on-farms are 90.4 million bushels, while off-farm stocks were 20.9 million bushels. These totals are down 4 and 38 percent, respectively, from last September 1.

Old crop corn stored in all positions on September 1, 1992, is estimated at 1.10 billion bushels, down 28 percent from September 1, 1991. The indicated disappearance from all positions for the June-August quarter is 1.64 billion bushels, 11 percent above the disappearance for the same quarter a year earlier.

Barley stored in all positions on September 1, 1992, is estimated at 415 million bushels, 6 percent below the stocks of September 1, 1991.

Oats stocks stored in all positions on September 1, 1992, are 289 million bushels, 2 percent above a year earlier. Of the total oat stocks on hand, 194 million bushels are stored on farms, 12 percent above last year.

The grain stocks district table will not be available until October 8 due to the late harvest. We will publish it in the next Reporter. Please call us if you need a copy before then.

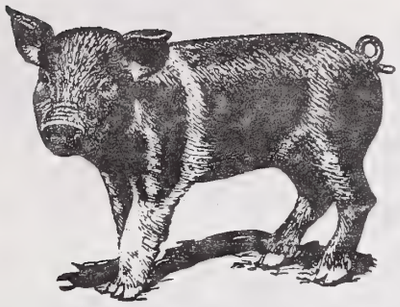
[1] Terminals, mills, and elevators. [2] Montana stocks for winter wheat and all spring wheat are made possible through funds provided by the Montana Wheat and Barley Committee. [3] Included in all spring wheat and all wheat. [4] Not included in order to avoid disclosing individual operations. * Some data revised.



SEPTEMBER 1 U.S. HOG INVENTORY UP 4 PERCENT

U.S. inventory of all hogs and pigs on September 1, 1992, was 61.5 million head. This was 4 percent above last year and 10 percent above September 1, 1990.

Breeding inventory, at 7.41 million head, was up 2 percent from a year ago and 9 percent above September 1, 1990. Market hog inventory, at 54.1 million head, increased 4 percent from a year ago and was up 10 percent from September 1, 1990.

The June-August 1992 U.S. pig crop was 25.8 million head, 5 percent more than last year and up 13 percent from the same period in 1990. Sows farrowing during this period totaled 3.17 million head, up 2 percent from last year and 10 percent above 1990. Pigs saved per litter were a record high 8.13 compared to 7.89 during the same period in 1991.

U.S. hog producers intend to have 3.07 million sows farrow during the September-November quarter, 3 percent more than the actual farrowings during the same period last year and 8 percent more than in 1990.

Farrowings intended for December 1992-February 1993, at 2.98 million sows, are 3 percent above 1992 and up 10 percent from 1991.

The Montana crop acreage and grain stocks estimates in this issue of the Reporter are the result of surveying approximately 1,800 Montana farmers and ranchers during September. Names were selected on a statistical probability basis. SPECIAL THANKS to those operators that were interviewed and responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

AUGUST MILK PRODUCTION

Milk production in the 21 major States during August totaled 10.8 billion pounds, 4 percent more than production in these same States in August 1991. July revised production at 10.9 billion pounds was 4 percent above July 1991. Production per cow in the 21 major States averaged 1,303 pounds for August, 64 pounds more than August 1991.

The number of cows on farms in the 21 major States was 8.27 million head, 90,000 head less than August 1991 but was 9,000 more than July 1992.

During the April-June period, the 21 major States produced 33.0 billion pounds of milk, 84.4 percent of the U.S. production. If producers in the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 12.8 billion pounds for August 1992.

A toll free number is now available to potential buyers or sellers of Montana hay or pasture. Call 1-800-722-3276 for information.

QUARTERLY EGG PRODUCTION

Montana's laying flocks produced 41 million eggs in the June through August 1992 quarter, compared with 43 million last year. The number of layers for the quarter averaged 610,000 compared with 660,000 in 1991. The rate of lay this quarter was 73.6 eggs per hundred layers compared with 71.2 eggs per hundred layers a year ago.

The **Nation's** laying flocks produced 17.5 billion eggs during the June through August quarter, up 1 percent from the corresponding quarter a year ago. Production included 15.0 billion for table eggs, 2.29 billion broiler-type hatching eggs, and 193 million egg-type hatching eggs. Layers for the quarter averaged 275 million, up 1 percent from the 272 million a year ago.

All layers in the **U.S.** on September 1, 1992 totaled 274 million, up slightly from a year ago. The 274 million layers consisted of 230.5 million layers producing table or commercial type eggs, 40.4 million layers producing broiler-type hatching eggs, and 2.65 million layers producing egg-type hatching eggs. Rate of lay per day on September 1, 1992 averaged 69.7 eggs per hundred layers, compared with 69.3 eggs per hundred layers on September 1, 1991.

RECORD HIGH U.S. POTATO PRODUCTION IN 1991

Total 1991 potato production in the U.S. was estimated at 418 million cwt, 4 percent above a year earlier and 13 percent above 1989. Harvested area, at 1.37 million acres, was up slightly and yields averaging 304 cwt per acre jumped 11 cwt. Yield per acre and production were both record highs.

Value of the 1991 potato crop fell to a five-year low of $2.04 billion, down 16 percent from a year earlier and 25 percent below two years ago. Record high production lowered prices to an average of $4.96 per cwt compared with $6.08 in 1990 and $7.36 in 1989.

Sales from the 1991 potato crop totaled 379 million cwt, up 3 percent from 1990 and 12 percent above 1989. Non-sales of 1991 potatoes accounted for 38.4 million cwt, up 12 percent from the previous year and 25 percent greater than 1989. In the 1991 season, farmers sold 91 percent of their crop. The remaining 9 percent was either lost (shrinkage and loss) or used for seed, home use, and livestock feed on farms where grown. Shrinkage and loss were estimated at 32.4 million cwt, 14 percent greater than the previous season and 30 percent above 1989. Livestock feed and home use totaled 987,000 cwt, up 8 percent. Growers kept 5.01 million cwt of potatoes for seed on their own farms, down 1 percent from the previous year.

Processors used a record high 226 million cwt of potatoes, up 2 percent from 1990 and 12 percent above the 1989 usage. Table stock totaled 128 million cwt, a gain of 7 percent from last year, while other sales (seed and livestock feed) of 25.4 million cwt were down 3 percent.

Montana's potato production for 1991 was 2.8 million cwt, of which 2.4 million cwt were sold. Growers received a season average price of $5.70 per cwt in 1991, which compares with $8.60 received the previous year. Most of Montana's potatoes are sold for certified seed.

SEPTEMBER CROP PRODUCTION

The expected production of hard spring wheat is 72.0 million bushels, up 7 percent from last month, but 12 percent below last year's output. Growers expect to average 30 bushels per acre, up two bushels from last month. Spring wheat yields have exceeded early expectations in much of Eastern Montana. Yield potentials were reduced in areas receiving snow and rain as harvest was about to begin. Durum wheat production is forecast to be 4.3 million bushels with an average yield of 33 bushels, up 3 bushels from last month. Winter wheat production was not estimated in September. The August winter wheat estimate of 60.8 million bushels when added to all spring wheat production would total 137.0 million bushels for all wheat production.

Barley production is forecast to be 52.8 million bushels, unchanged from August, but 38 percent below last year's output. Yields were higher than early expectations in much of the state, but were offset by losses in areas that got heavy snow and rain at harvest time. Oats were not estimated in September, but were forecast at 3.8 million bushels in August.

Sugar beet producers expect to harvest 1.3 million tons in 1992, 2 percent less than was produced last year. The expected production of dry beans is 172,000 cwt, 9 percent more than 1991 production. New estimates of hay production will be available on October 8th. The August all hay production estimate was 4.8 million tons, down 8 percent from 1991.

The total **U.S. all wheat** production is forecast at 2.41 billion bushels, up 3 percent from last month and 22 percent above 1991. Area for grain is 63.1 million acres, up 9 percent from last year. Average yield is forecast at 38.2 bushels per acre, up 1.2 and 3.9 bushels from August and 1991, respectively. Durum wheat production for 1992 is forecast at 87.8 million bushels, up 9 percent from August 1 but down 16 percent from 1991. Yields are now expected to average 36.3 bushels per acre, up 2.8 bushels per acre from August and 3.8 bushels per acre above last year. Area for grain is unchanged from last month. Other spring wheat production forecast is a record high 719 million bushels. This represents a 10 percent increase from August 1 and is 42 percent higher than 1991. U.S. yields are forecast at a record high 39.7 bushels per acre, eclipsing 1990's previous high mark by 3.0 bushels per acre. The September forecast is up 3.6 bushels from last month and is 6.3 bushels per acre better than last year. Harvested area remains unchanged at 18.1 million acres, up 20 percent from last season.

U.S. barley production is forecast at 429 million bushels, up 9 percent from last month but 8 percent below the 1991 crop. The expected yield per acre is forecast at 58.9 bushels compared with last month's 54.1 bushels and last season's average of 55.2 bushels. Area harvested ard to be harvested, at 7.29 million acres, is 13 percent below last year's 8.41 million acres. Harvest in the major producing States is running behind normal.

The September 1 sugar beet production forecast of 29.3 million tons is fractionally above the August 1 forecast and 4 percent above last year's output. Yields are expected to average 20.7 tons per acre, up 0.5 ton from last year. The 1992 crop of dry beans is forecast at 23.0 million cwt, 30 percent below last year and slightly below the August 1 forecast.

SEPTEMBER 1 PASTURE & RANGE FEED CONDITION

September 1 **pasture and range feed** condition in **Montana** was rated at 78 percent of normal, 6 points below last year and down 7 points from last month. Cooler and wetter weather during August maintained the limited forage available. The North Central district continues to be much below normal with a 56 percent rating, 28 points below last September's rating.

AUGUST PRICES RECEIVED

The mid-August 1992 all farm products index of prices received by Montana farmers and ranchers moved down 7 points from the whole month of July. The index for all commodities, at 152 percent of its 1977 base, was most influenced by a 23 point drop in the all crops index, from 150 in July to 127 at mid-August.

The mid-August all wheat price averaged $2.88, down 66 cents per bushel from July, but 27 cents above August a year ago. Barley was $2.39 per bushel, down 8 cents from last month and 45 cents below the previous year. Oats, at $1.16 per bushel, were down 13 cents from July but 12 cents above August 1991. Alfalfa hay decreased $3.00 per ton to $71.00, $21.00 higher than August 1991.

The all livestock index, at 173, was 5 points higher than July but 6 points lower than a year earlier. Cow prices, at $48.70 per cwt, were down 20 cents from last month and $2.10 below a year ago. Calves, at $94.10, were up $3.60 from July but $5.70 less than a year ago. Steer and heifer prices increased $1.50 to $74.90 per cwt, $1.00 more than August 1991. Sheep, at $21.10 per cwt, were unchanged from July, while lambs were down $1.20 to $56.30.

Nationally, the August all farm products index of prices received moved down one point from July to 137 based on 1977=100. Price decreases for corn, wheat, oranges, and potatoes more than offset price increases for lettuce, cattle, strawberries, and onions.

WHEAT MOVEMENT

Montana wheat shipped to out-of-state destinations in December 1991-May 1992, at 89.9 million bushels, was 86 percent above the same period last year and the largest amount ever recorded by the Grain Movement survey, which dates back to 1972. Shipments to eastern destinations totaled 1.4 million bushels, more than double last year. Movement to the west was up 89 percent, at 88 million bushels. Other destinations, mostly south and southeast of Montana, received 0.4 million bushels—63% below last year.

Rail movement amounted to 84.4 million bushels—94 percent of total shipments compared with 91 percent in the 1990-91 period.

Montana barley shipped to out-of-state destinations, December 1991—May 1992, was 24.8 million bushels, more than double the same period last year. Shipments to western destinations were up 94 percent and eastern destinations were up 261 percent. Barley hauled by rail was 95 percent of total movement, up from 91 percent for the same period last year.

JULY RED MEAT PRODUCTION

Montana slaughter plants produced 1.4 million pounds of red meat in July 1992. This production is a 2 percent decrease from June and 6 percent less than production of a year ago.

A total of 1,500 head of cattle were slaughtered in the state, 100 less than last year. Average live weight of cattle slaughtered increased 21 pounds from last year to 1,217 pounds.

The number of hogs slaughtered totaled 2,300 head, a 400 head decrease from July 1991. Average live weight of hogs slaughtered was 230 pounds, compared with 241 pounds a year ago. Sheep and lamb slaughter, at 400 head, is unchanged from last year. Average live weight of sheep and lambs increased 1 pound from 1991 to 127 pounds.

Commercial red meat production for the **United States** totaled 3.44 billion pounds. This production is 6 percent above a year earlier and 1 percent above the previous July record of 3.28 billion pounds set in 1986.

Beef production totaled 2.02 billion pounds. This was up 1 percent from a year earlier. Head kill totaled 2.86 million, up 1 percent. The average live weight increased 5 pounds to 1,165.

Veal production, at 24.0 million pounds, was up 10 percent. Calf slaughter totaled 108,800 head, down 2 percent. The average live weight increased 45 pounds to 384.

Pork production, at 1.37 billion pounds, was up 14 percent from a year earlier. This surpassed the previous July record of 1.23 billion pounds set in 1980. Hog kill totaled 7.64 million head, up 13 percent from last year. The average live weight was up 1 pound to 251.

Lamb and mutton production, at 27.0 million pounds, was down slightly from last year. Slaughter totaled 443,600 head, down 1 percent. The average live weight was up 3 pounds to 125.

January-July red meat production was 23.4 billion pounds, up 5 percent from the comparable period a year earlier. Accumulated beef production was up 2 percent, while veal was up 6 percent, pork was up 9 percent, but lamb and mutton was down 3 percent.

CATTLE ON FEED DOWN 5 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed on August 1, 1992, for slaughter market in the 7 States preparing monthly estimates totaled 7.00 million head, down 5 percent from a year ago but up fractionally from August 1, 1990.

Placements of cattle and calves on feed in the 7 States during July totaled 1.43 million, up 8 percent from last year but 6 percent below 1990. Net placements of 1.35 million for July were up 9 percent from last year but 7 percent below 1990.

Marketings of fed cattle during July totaled 1.68 million, down 2 percent from last year and 5 percent below two years ago. This is the lowest July marketings since 1985.

Other disappearance totaled 85,000 head compared to 92,000 in July 1991, and 77,000 in July 1990.

JULY WORKER NUMBERS DOWN

There were 3.56 million people working on the Nation's farms and ranches during the week of July 12-18, 1992. Self-employed farm operators accounted for 1.60 million of the total, along with 536,000 unpaid workers, and 1.03 million workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 385,000 workers.

Farm operators paid their hired workers an average wage of $5.82 per hour during the July 1992 survey week. This rate was up 25 cents from a year earlier. Workers paid on an hourly basis earned $5.56 per hour compared with $5.35 last July. Field workers received an average of $5.47 per hour, up 21 cents from the July 1991 survey week. Livestock workers earned $5.48 per hour compared with $5.16 a year earlier.

Farm operators in the Mountain I region, which includes Montana, Idaho and Wyoming, paid their hired workers an average wage of $5.22 per hour during the July 1992 survey week, up 4 percent from a year ago. Field workers were paid $5.06, 7 cents more than last year, while livestock workers earned $5.16, 50 cents more than wages of July 1991.

Benefits, such as housing and meals, were provided to 41 percent of the hired workers during the survey week, compared to 38 percent in July 1991.

JULY EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 5.90 billion during July 1992, up 2 percent from the 5.81 billion produced a year ago. Production included 5.07 billion for table eggs, 769 million for broiler-type hatching eggs, and 65.0 million for egg-type hatching eggs. July egg production per 100 layers was 2,151 eggs, compared with 2,140 in July 1991.

All layers in the U.S. on August 1, 1992, totaled 274 million, up 1 percent from a year ago. The 274 million layers consisted of 230 million layers producing table or commercial type eggs, 41.5 million layers producing broiler-type hatching eggs, and 2.71 million layers producing egg-type hatching eggs. Rate of lay per day on August 1, 1992, averaged 69.5 eggs per 100 layers, up 1 percent from last year's 68.9 eggs per 100 layers.

Laying flocks in the 20 major egg production states produced 4.83 billion eggs during July, up 1 percent from the 4.79 billion produced a year ago. The number of layers during July averaged 224 million, up fractionally from a year ago.

Data for the 30 quarterly states (which include Montana) were estimated based on the percent change in the 20 states conducting monthly surveys. These monthly states accounted for about 82 percent of the U.S. egg production during the 3-month period, March 1992 through May 1992.

JULY MILK PRODUCTION

Milk production in the 21 major States during July totaled 10.9 billion pounds, 4 percent more than production in these same States in July 1991. June revised production at 10.9 billion pounds was 3 percent above June 1991.

Production per cow in the 21 major States averaged 1,319 pounds for July, 65 pounds more than July 1991.

The number of cows on farms in the 21 major States was 8.26 million head, 94,000 head less than July 1991 and was 1,000 less than June 1992.

During the April-June period, the 21 major States produced 33.0 billion pounds of milk, 84.4 percent of the U.S. production. If producers in the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production for July 1992 would be 12.9 billion pounds.

AUGUST CROP PRODUCTION

Montana's 1992 wheat crop is expected to be 131.8 million bushels based on August 1 conditions. This is 15 percent above the previous month's forecast, but 17 percent below last year's production. Winter wheat harvest, moving into full swing, is expected to produce 60.8 million bushels 4 percent more than forecast on July 1, but still 16 percent less than last year. Yield per acre is forecast at 27 bushels. Durum production, at 3.9 million bushels, is 11 percent above the July forecast, but 34 percent below 1991. Other spring wheat production is forecast at 67.2 million bushels, 27 percent above the previous month, but 18 percent below the 1991 production. Expected yield per acre is up 6 bushels from July 1 at 28.

Barley production is forecast 19 percent above July 1 at 52.8 million bushels. July rains and cool weather pushed yield prospects up 7 bushels to 44 bushels per acre. Oats yield is expected to average 47 bushels per acre up 5 bushels per acre. This would give a total production of 3.8 million, only 62 percent of last year's crop.

Hay production is expected to be 8 percent less than last year's record crop, at 4.8 million tons. Alfalfa production, at 3.5 million tons is 7 percent below 1991. Other hay is forecast 11 percent less than the previous year at 1.3 million tons.

Corn harvested for grain is forecast at 2.1 million bushels, up 18 percent from last year. Dry bean production is expected to exceed 1991 by 9 percent with 172,000 cwt. Sugar beet production at 1.3 million tons will be down 2 percent from last year.

All U.S. wheat production is forecast at 2.34 billion bushels as of August 1. This is up 5 percent from July 1 and up 18 percent from 1991.

The last 1992 U.S. forecast of winter wheat production is 1.60 billion bushels, up 2 and 17 percent from July 1 and 1991, respectively. Durum wheat production is forecast at 80.9 million bushels, up 9 percent from July 1 but down 22 percent from 1991. Other spring wheat production as of August 1, is forecast at a record high 654 million bushels. This is up 12 percent from last month's forecast and 30 percent more than in 1991.

Barley production is forecast at 395 million bushels, up 6 percent from last month but 15 percent below the 1991 crop. Oats production is forecast at 276 million bushels, up 8 percent from last month and 14 percent above the 1991 crop.

The first forecast of the 1992 corn for grain crop is 8.8 billion bushels, 17 percent above last year's crop. The U.S. average yield per acre is forecast at a record high 121.3 bushels, up 12.7 bushels from last year's yield.

AUGUST 1 PASTURE & RANGE FEED CONDITION

Montana pasture and range feed condition on August 1 was up 22 points from July 1 averaging 85 percent of normal. This is 9 points below last year's favorable reading of 94 percent.

The North Central district is still low with a 58 percent rating, but improved 30 points as July brought rain and cool temperatures to that area and much of the state.

[1] District data funded by the Montana Wheat & Barley Committee. [2] Preliminary.

JULY PRICES RECEIVED

The mid-July 1992 all farm products index of prices received by Montana farmers and ranchers decreased 3 percent from the whole month of June. The index, at 159 percent of its 1977 base, was 6 percent higher than a year ago.

The all crops index, at 138, was 10 percent lower than June, but 16 percent higher than a year earlier. The only small grain that did not show a decrease in mid-July compared with June was malting barley which remained unchanged. The all wheat price ($3.32 for mid-July) was down 44 cents per bushel from June, but up 67 cents from July a year ago. The mid-July barley price, at $2.00, was down 9 cents per bushel from June and down 55 cents from July 1991. Oats, at $1.20, was down 7 cents per bushel from June and down 8 cents from a year earlier in July. Alfalfa hay, at $74.00 a ton, remained unchanged from June, but was up $21.00 a ton from July 1991.

The all livestock index, at 177, was 1 percent higher than June and 1 percent lower than a year earlier. Cow prices, at $51.10 per cwt, were down 10 cents per cwt from June and down $2.10 from July a year ago. Prices for steers and heifers, at $77.00 per cwt, were down $1.00 from June and down 20 cents from a year earlier. Calves, at $90.10 per cwt, were down $1.00 from June and down $3.10 per cwt from July 1991. Sheep, at $22.00 per cwt, were up 80 cents per cwt from June and up $1.80 from July a year ago, while lambs, at $62.50 per cwt, were down 20 cents from June, but up $9.90 per cwt from July a year ago.

Nationally, the July All Farm Products Index of Prices Received moved down three points from June to 137 based on 1977=100. Price decreases for hogs, corn, soybeans, and oranges more than offset price increases for potatoes, cattle, milk and broilers.

The All Farm Products Index was 11 points below July 1991. Orange price declines accounted for 9 of the 11 point index drop. Price declines for hogs, peanuts, and broilers were the other major contributors to the index decline. Price increases for milk, wheat, apples, and lettuce were slightly offsetting.

MONTANA FARM NUMBERS DOWN

The number of farms and ranches in Montana in 1992 is estimated at 24,600, down 100 from 1991. Land in farms and ranches totaled 60.0 million acres, a reduction of less than 0.5 percent. The average size moved up slightly to 2,439 acres.

The number of farms in the United States in 1992 is estimated at 2.096 million, down less than 1 percent from 1991. Total land in farms is 980 million acres, down 2.7 million acres from last year. The rate of decline in number of farms and land in farm acreage slowed while the average farm size increased from 467 acres to 468 in 1992.

Texas remains the state with the most farms, 183,000, down 2,000 from a year earlier. Missouri is second with 107,000, the same as last year, followed by Iowa with 102,000 farms, also unchanged from 1991. In addition to Texas, Ohio and Kansas experienced the largest decrease in farm numbers with each down 2,000 farms from a year earlier.

JULY 1 CATTLE INVENTORY

All cattle and calves in the United States as of July 1, 1992, totaled 109.2 million head, unchanged from July 1, 1991, but up 2 percent from the 107.4 million two years ago.

Class estimates and the percentage changes from July 1 last year and two years ago, respectively, are as follows:

- All cows and heifers that have calved, at 44.5 million, were unchanged from a year ago but up 1 percent from two years ago. Beef cows, at 34.7 million, were up slightly from July 1, 1991, and 2 percent above two years ago. Milk cows, at 9.85 million, were 1 percent below July 1, 1991, and 2 percent below 1990.

- All heifers 500 pounds and over, 16.9 million, down 1 percent but up 3 percent. Beef replacement heifers, 5.7 million, up 8 percent and up 12 percent. Milk replacement heifers, 4.20 million, unchanged from the previous two years. Other heifers, 7.0 million, down 7 percent and down 1 percent.

- Steers weighing 500 pounds and over, 15.1 million, unchanged but up 4 percent.

- Bulls weighing 500 pounds and over, 2.2 million, unchanged from the previous two years.

- Calves under 500 pounds, 30.5 million, up slightly and up 1 percent.

CALF CROP UP 1 PERCENT

The 1992 calf crop is expected to be 39.5 million head, up 1 percent from both 1991 and 1990. Calves born during the first half of the year are estimated at 28.8 million, up slightly from both 1991 and 1990.

CATTLE AND CALVES: NUMBER BY CLASS AND CALF CROP, UNITED STATES, JULY 1, 1990-92

Class	1990	1991	1992	1992 as % 1991
		1,000 Head		Percent
Cattle and Calves	107,400	109,200	109,200	100
Cows and Heifers That Have Calved	44,000	44,500	44,500	100
Beef Cows	33,900	34,500	34,650	100
Milk Cows	10,100	10,000	9,850	99
Heifers 500 Pounds and Over	16,400	17,000	16,900	99
For Beef Cow Replacement	5,100	5,300	5,700	108
For Milk Cow Replacement	4,200	4,200	4,200	100
Other Heifers	7,100	7,500	7,000	93
Steers 500 Pounds and Over	14,500	15,100	15,100	100
Bulls 500 Pounds and Over	2,200	2,200	2,200	100
Calves Under 500 Pounds	30,300	30,400	30,500	100
Calf Crop 1/	39,249	39,256	39,500	101

1/ For the current year, the calf crop is the number of calves born before July 1 plus the number expected to be born on and after July 1.

MONTANA WHEAT & BARLEY VARIETIES

Montana's wheat and barley varieties report was made possible with funds provided by the **Montana Wheat & Barley Committee** and the **American Malting Barley Association, Inc.**. A more detailed varietal report may be obtained from our office upon request.

U.S. JUNE EGG PRODUCTION UP 1 PERCENT

U.S. egg production totaled 5.69 billion during June 1992, up 1 percent from the 5.62 billion produced a year ago. Production included 4.86 billion table eggs, 759 million broiler-type hatching eggs, and 64.0 million egg-type hatching eggs. The total number of layers during June averaged 275 million, up 1 percent from a year ago. June egg production per 100 layers was 2,069 eggs, compared with 2,068 in June 1991.

All layers in the U.S. on July 1, 1992, totaled 274 million, up 1 percent from last year's total of 271 million. The 274 million layers consisted of 230 million layers producing table or commercial type eggs, 41.6 million layers producing broiler-type hatching eggs, and 2.73 million layers producing egg-type hatching eggs. Rate of lay per day on July 1, 1992, averaged 69.3 eggs per 100 layers, compared to last year's 69.2 eggs per 100 layers.

Laying flocks in the 20 major egg production States produced 4.65 billion eggs during June, up 1 percent from the 4.61 billion produced a year ago. The number of layers during June averaged 225 million, up 1 percent from a year ago. Data for the 30 quarterly States (which include Montana) were estimated based on the percent change in the 20 States conducting monthly surveys. These monthly States accounted for about 82 percent of the U.S. egg production during the 3-month period, March 1992 through May 1992.

JUNE RED MEAT PRODUCTION

Montana slaughter plants produced 1.4 million pounds of red meat in June 1992. This production is an 8 percent increase from May, but is a 1 percent decrease from production a year ago. The number of cattle slaughtered in the state, at 1,600 head, is unchanged from last year. Average live weight of cattle slaughtered in the state was 1,202 pounds, also unchanged from last year.

A total of 2,300 hogs were slaughtered, 100 more than last year. Average live weight of hogs slaughtered was 236 pounds, compared with 246 a year ago. Sheep and lamb slaughter was 200 head, down 100 head from June 1991. Average live weight of lamb and mutton animals decreased 10 pounds from last year to 122 pounds.

Commercial red meat production for the **United States** totaled 3.42 billion pounds. This production is 12 percent above a year earlier and 2 percent above the previous June record high of 3.34 billion pounds set in 1989. Pork production surpassed the previous June record high of 1.31 billion pounds set in 1980.

Beef production totaled 2.04 billion pounds. This was up 9 percent from a year earlier. Head kill totaled 2.92 million, up 8 percent. The average live weight increased 9 pounds to 1,159. Veal production, at 25.0 million pounds, was up 26 percent. Calf slaughter totaled 107,600 head, up 17 percent. The average live weight increased 38 pounds to 394. Pork production, at 1.33 billion pounds, was up 17 percent from a year earlier. Hog kill totaled 7.35 million head, up 17 percent from last year. The average live weight was up 1 pound to 254.

Lamb and mutton production, at 27.0 million pounds, was up 8 percent from last year. Slaughter totaled 435,800 head, up 7 percent. The average live weight increased 2 pounds to 125. January-June red meat production was 20.0 billion pounds, up 5 percent from the comparable period a year earlier. Accumulated beef production was up 2 percent, veal was up 5 percent, pork was up 9 percent, but lamb and mutton was down 3 percent.

U.S MINK PELT PRODUCTION DOWN 3 PERCENT

Mink pelt production in the United States in 1991 totaled 3.27 million pelts, down 3 percent from 1990. Wisconsin, the major mink producing State, produced 900,500 pelts. By color class, the number of pelts as a percent of the total U.S. production follows: Standard-54.3 percent; Ranch Wild-11.9 percent; Gunmetal-10.0; Demi-buff-8.1 percent; Mahogany-6.6 percent. The remaining color classes accounted for 9.1 percent.

Mink pelts produced during the 1991 crop year were valued at $70.9 million, down 17 percent from $85.8 million a year ago. The average price per pelt for the 1991 crop year was $21.70, compared with $25.50 in 1990.

Female mink bred to produce kits in 1992 totaled 781,100, down 11 percent from the previous year. Many mink producers reported the mink price motivated them to "pelt out" and reduce or close out their mink operation. Percent of total females bred to produce kits in 1992 by color class are: Standard-49.9 percent; Ranch Wild-14.1 percent; Mahogany-10.2 percent; Demi-buff-8.2 percent; Gunmetal-7.8 percent. The remaining color classes accounted for 9.8 percent.

There were 682 mink farms producing pelts in 1991, down 12 percent from a year ago. Leading States were Utah with 160 farms, Wisconsin with 143 farms, and Minnesota with 89. There were 77 mink farms which also raised fox in 1991, down 8 percent from the previous year.

QUARTERLY MILK PRODUCTION

Montana dairymen produced 88 million pounds of milk in the April-June quarter of 1992, 1 million pounds greater than production from the same quarter last year. The average number of milk cows on farms remained unchanged from 1991 at 24,000 head.

Producers fed an average of 16 pounds of grain and other concentrates per cow on July 1, 1992, the same average as last year. The value of grain and concentrates fed was $6.95 per cwt, up 5 cents from 1991.

The quarterly production of milk for the U.S. was 39.0 billion pounds, 1 percent above the April-June period last year. The average number of milk cows in the U.S. during the April-June quarter was 9.85 million head, 149 thousand less than the same period last year.

Grain and other concentrates fed to milk cows on July 1, 1992, averaged 17.6 pounds per cow, 3 tenths of a pound more than on July 1, 1991. The value of grain and other concentrates fed to cows on July 1, averaged $7.82 per hundredweight, $0.11 more than the July 1, 1991 price.

CATTLE ON FEED DOWN 6 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed for slaughter market in the 13 States preparing quarterly estimates totaled 8.85 million head, down 6 percent from a year ago but 1 percent above July 1, 1990. The inventory included 5.74 million steers and steer calves, 7 percent below a year ago. This group accounts for 64.9 percent of the total inventory. Heifers and heifer calves accounted for 3.04 million head, 6 percent below a year ago.

Placements of cattle and calves on feed in the 13 States during the April-June 1992 quarter totaled 5.27 million, up 5 percent from both last year and April-June 1990. Net placements of 4.83 million for April-June were up 6 percent from last year and 4 percent above 1990.

Marketings of fed cattle during the April-June 1992 quarter totaled 5.68 million, down 2 percent from last year, and 5 percent below two years ago. Other disappearance totaled 444,000 head compared to 464,000 in April-June 1991 and 400,000 in April-June 1990.

JULY 1 CROP PRODUCTION FORECAST

Montana's 1992 all wheat crop is expected to be 114.8 million bushels, 28% less than the 1991 crop. The yield forecast of 24 bushels per acre is nearly 10 bushels below last years record yield. The forecast is based on the July 1 survey of Montana farms and ranches.

Winter wheat production is estimated at 58.5 million bushels, 19% below last year. Hard red spring wheat production is expected to be 52.8 million bushels, down 35% from the previous year. Durum production at 3.5 million bushels is down 41% from last year, as producers cut acreage by 28% and yield prospects are off 6 bushels per acre.

Barley production, forecast to be 44.4 million bushels, is 48% below last year's large crop. Growers set the stage for a small crop by cutting seeded acreage 25%. Dought conditions pulled yield prospects down to 37 bushels, 15 bushels below last year's record yield.

Oats production is expected to be 44% below last year as both acres to be harvested for grain and yield per acre are much below 1991. Growers expect to harvest nearly 3.4 million bushels from 80,000 acres.

Cherry production is forecast at 800 ton. Harvest got underway shortly after the first of July. Last year there was no commercial production because of unfavorable weather in the spring, and winter kill of trees in 1988-89.

United States winter wheat production is forecast at 1.57 billion bushels, up 2 percent from June 1 and up 15 percent from last year. Higher Soft Red Winter yields caused the increase in production. Overall, the average yield is expected to be 37.0 bushels per acre, up 1.1 bushels from June 1.

Other spring wheat is forecast at a record high 584 million bushels, up 16 percent from 1991. The yield forecast of 32.3 bushels per acre, down 1.1 bushels from last year, was offset by the highest expected acres for grain since 1953.

Barley production at 371 million bushels, is 20 percent below the 1991 production. Yields are expected to average 50.9 bushels per acre, 4.3 bushels less than last year. Area for harvest is expected to be down 13 percent from last year.

Oat production is forecast at 256 million bushels, up 6 percent from last year. Yield is forecast at 53.5 bushels per acre, up 2.9 bushels from 1991. Area for harvest is virtually the same as a year earlier.

JULY 1 PASTURE & RANGE FEED CONDITION

Montana's pasture and range feed condition rating for July 1 is 63 percent of normal. The July 1 rating declined 1 point from last month, and is 32 points below last year's high rating.

The North Central district, still low at 28 percent of normal, has improved 17 points since June 1. The Central district, with a rating of 64, improved 19 points. At the same time the northeast district saw conditions decline 23 points.

JUNE PRICES RECEIVED

The June 1992 index of prices received by Montana farmers and ranchers moved down 7 points from the month of May. The index for all commodities, at 161 percent of its January-December 1977 average, was most influenced by a 14 point decrease in the meat animals index.

The all crops index, at 153, was unchanged from May but was 35 points higher than a year ago. The mid-June all wheat price averaged $3.69, down 8 cents per bushel from May and 97 cents above June a year ago. Barley was $2.27 per bushel, up 7 cents from last month and 9 cents above the previous year. Oats, at $1.20 per bushel, were down 19 cents from May and 10 cents less than June 1991. The drought has had an effect on the price of alfalfa hay, which increased $22.00 per ton to $74.00.

Cow prices, at $50.20 per cwt, were down 40 cents per cwt from last month and $4.90 below a year ago. Calves, at $81.80, were down $3.50 from May and $15.70 less than a year ago. Steer and heifer prices decreased $1.10 to $72.90 per cwt, $6.70 less than June 1991. Sheep, at $22.00 per cwt, were up $5.00 from May, while lambs also rose $5.00 to $62.40.

Nationally, the June all farm products index of prices received moved down 2 points from May to 139 based on 1977=100. Price declines for wheat, cattle, oranges and peaches more than offset price increases for milk, hogs, tomatoes and strawberries.

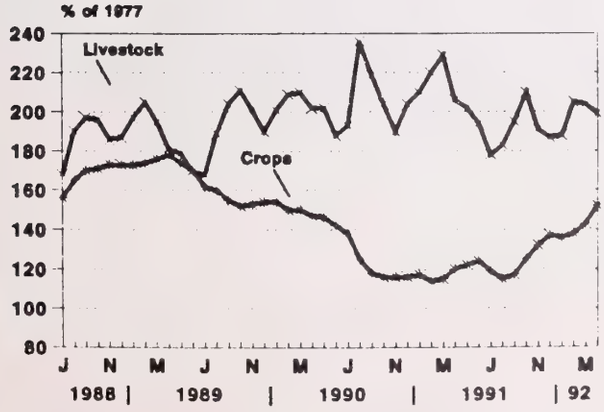
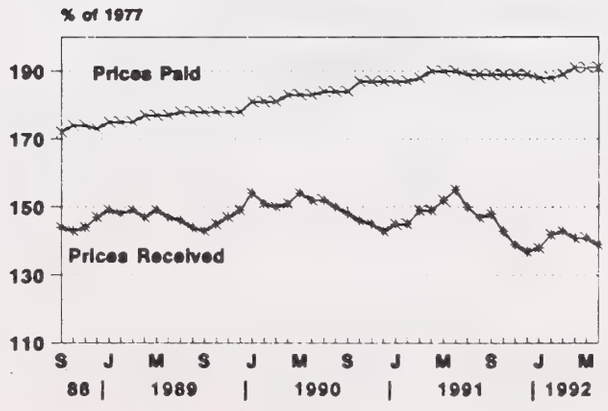
MONTANA CROP & LIVESTOCK PRICES RECEIVED INDEXES



UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



U.S. HOG INVENTORY UP 5 PERCENT

U.S. inventory of all hogs and pigs on June 1, 1992, was 59.3 million head. This was 5 percent above last year and 10 percent above June 1, 1990.

-- Breeding inventory, at 7.60 million head, was 1 percent above last year and 7 percent above two years ago.

-- Market hog inventory, at 51.7 million head, was 6 percent above a year ago and 10 percent above June 1, 1990.

The December 1991-May 1992 U.S. pig crop was 50.4 million head, 6 percent more than last year and 11 percent above the same period two years ago. Sows farrowing during the six month period totaled 6.26 million, up 4 percent from last year and 9 percent above the same period in 1990. Pigs saved per litter was 8.05, a new record high for the period, compared with 7.92 last year and 7.89 two years ago. The March-May U.S. pig crop was 27.2 million head, 4 percent above a year earlier.

U.S. hog producers intend to have 6.18 million sows farrow during the June-November period, a 2 percent increase from the actual sows farrowed during the same period in 1991 and 8 percent above two years ago. Farrowings for June-August are expected to be up 1 percent from last year and September-November farrowings are expected to be 3 percent above a year earlier.

JUNE ACREAGE REPORT

Montana farmers plan to harvest 4.78 million acres of wheat in 1992, 9 percent more than last year. Winter wheat acres to be harvested are forecast at 2.25 million acres, up 25 percent from last year. Farmers planted 2.65 million acres of spring wheat, up 2 percent from last year, and expect to harvest 2.4 million acres. Durum wheat planted acreage came in at 130,000 acres, down 28 percent from last year.

Montana farmers planted 1.35 million acres of barley, down 25 percent from last year. Barley harvested acreage is expected to be 89 percent of the planted acreage. Oats planted acreage, at 165,000 acres, is down 18 percent from last year. Oats to be harvested for grain, at 80,000 acres, are down from 110,000 in 1991. Farmers and ranchers intend to harvest 1.4 million acres of alfalfa hay, down 7 percent from last year. All hay harvested acreage is expected to be 2.25 million acres, down 6 percent from last year. Farmers planted 70,000 acres of corn for all purposes, down 7 percent from last year.

Nationally, winter wheat area planted for 1992 is placed at 51.1 million acres, up 2 percent from the "Prospective Plantings" report released March 31, 1992, and is fractionally higher than 1991. Grain harvested area is now placed at 42.6 million acres, down 1 percent from the June 1 forecast but up 8 percent from 1991. Durum wheat acreage is down 24 percent from 1991 and is the lowest since 1970. Planted area for other spring wheat for 1992 is up 20 percent from 1991. Acreage for grain is expected to total 18.1 million acres, and is the highest since 1953.

Barley seedings last fall and this spring are down 13 percent from last year. Oats planted last fall and this spring are down 7 percent from 1991. This is the least acreage planted to oats since estimates for planted acreage were first made in 1926. Growers expect to harvest 60.2 million acres of hay in 1992. This acreage is 4 percent below last year and 2 percent below 1990. The area of alfalfa and alfalfa mixtures cut for hay is estimated at 24.1 million acres for 1992, 6 percent below the 1991 total and 5 percent below 1990.

The Montana crop acreage and grain stocks estimates in this issue of the Reporter are the result of surveying approximately 2,500 Montana farmers and ranchers during June. Names were selected on a statistical probability basis. SPECIAL THANKS to those operators that were interviewed and responded to the survey. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

7 STATE CATTLE ON FEED DOWN 9 PERCENT

Cattle and calves on feed for slaughter market in the 7 States preparing monthly estimates totaled 7.83 million head on June 1, down 9 percent from a year ago and 1 percent below June 1, 1990. **Placements** of cattle and calves on feed in the 7 States during May totaled 1.72 million, down 3 percent from last year but up 8 percent from 1990. **Net placements** of 1.60 million for May were down 2 percent from last year but 11 percent above 1990. **Marketings** of fed cattle during May totaled 1.59 million, down 3 percent from last year and 9 percent below two years ago. **Other disappearance** totaled 122,000 head compared to 141,000 in May 1991 and 150,000 in May 1990.

[1] Preliminary. [2] Planted for all purposes. [3] Production forecast available July 10, 1992. [4] Production forecast available August 12, 1992. [5] Production forecast available November 10, 1992.

MAY 1992 COMMERCIAL RED MEAT PRODUCTION

Montana slaughter plants produced 1.3 million pounds of red meat in May 1992. This is a 1 percent increase from April, but is a 3 percent decrease from production of a year ago. The number of cattle slaughtered in the state at 1,400 head, is down 100 from last year. Average live weight of cattle slaughtered was 1,197 pounds, 19 pounds less than May 1991.

A total of 2,300 hogs were slaughtered, 100 more than last year. Average live weight was 236 pounds, 1 pound less than a year ago. There were 200 lamb and mutton animals slaughtered, 100 less than last year. Average live weight of lamb and mutton animals was 134 pounds, 11 pounds less than May 1991.

Commercial red meat production for the **United States** totaled 3.24 billion pounds, 2 percent below a year earlier. Beef production totaled 1.90 billion pounds. This was down 2 percent from a year earlier. Head kill totaled 2.75 million, down 4 percent. The average live weight increased 10 pounds to 1,150. Veal production at 25.0 million pounds was up 6 percent. Calf slaughter totaled 105,700 head, up 1 percent. The average live weight increased 30 pounds to 400.

Pork production at 1.29 billion pounds was down slightly from a year ago. Hog kill totaled 7.06 million head, down 1 percent from last year. The average live weight was up 1 pound to 254.

Lamb and mutton production at 25.0 million pounds was down 17 percent from last year. Slaughter totaled 388,300 head, down 16 percent. The average live weight decreased 2 pounds to 127.

January-May red meat production was 16.6 billion pounds, up 3 percent from the comparable period a year earlier. Accumulated beef production was up 1 percent, veal was up 2 percent, pork was up 7 percent, and lamb and mutton was down 5 percent.

JUNE 1 GRAIN STOCKS

Montana wheat stocks on June 1, 1992 totaled 37 million bushels, down 43 percent from a year ago. June 1 stocks are that amount of wheat left over from the 1991 and earlier years' crop production. This year's carryover stocks are 56 percent under the 10-year average and represent 23 percent of 1991 production.

Winter wheat stored, at 15 million bushels, was down 59 percent and all spring wheat, at 22 million bushels, was down 21 percent from June 1, 1991. Wheat stored on farms was 68 percent of the total in all positions. Barley stocks on June 1 totaled 18.4 million bushels, up 58 percent from last June. Oats stocks, at 2.75 million bushels, are up 69 percent from last year.

For the **U.S.** old crop all wheat in all storage positions on June 1, 1992 totaled 472 million bushels, down 45 percent from June 1, 1991. This is the smallest June 1 stocks since 1975.

Old crop durum wheat stored in all positions June 1, 1992 totaled 54.9 million bushels, off 12 percent from June 1991. Barley stored in all positions on June 1, 1992 is estimated at 130 million bushels, 4 percent below the stocks of June 1, 1991. Oats stored in all positions on June 1, 1992 totaled 127 million bushels, down 26 percent from June 1, 1991. Corn stored in all positions on June 1, 1992 is estimated at 2.74 billion bushels, down 8 percent from June 1, 1991.

MONTANA EGG PRODUCTION

Montana laying flocks produced 40 million eggs in the March through May 1992 quarter, 1 million fewer than the same quarter last year. Layers for the quarter averaged 600,000 compared with 615,000 in 1991. The rate of lay this year was 74.0 eggs per 100 layers compared with 72.2 per 100 layers in the 1991 quarter.

The **Nation's** laying flocks produced 17.7 billion eggs during the March through May quarter, up 2 percent from the corresponding quarter a year ago. Production included 15.2 billion table eggs, 2.34 billion broiler-type hatching eggs, and 199 million egg-type hatching eggs. Layers for the quarter averaged 277 million head, up 2 percent from the 272 million head a year ago.

All layers in the **U.S.** on June 1, 1992, totaled 275 million head, compared with 272 million head a year ago. The 275 million layers consisted of 230 million layers producing table or commercial type eggs, 42.1 million layers producing broiler-type hatching eggs, and 2.85 million layers producing egg-type hatching eggs. Rate of lay per day on June 1, 1992, averaged 68.6 eggs per 100 layers compared with 68.7 for June 1, 1991.

Laying flocks in the 20 major egg production states produced 4.84 billion eggs during May, up 2 percent from the 4.73 billion produced a year ago. The number of layers during May averaged 226 million head, up 1 percent from a year ago.

MAY MILK PRODUCTION

Milk production in the 21 major States during May totaled 11.2 billion pounds, slightly lower than production in these same States in May 1991. April revised production at 10.9 billion pounds was slightly less than April 1991.

Production per cow in the 21 major States averaged 1,360 pounds for April, 21 pounds more than May 1991. The number of cows on farms in the 21 major States was 8.25 million head, 142,000 head less than May 1991 and the same as April 1992. During the January-March period, the 21 major States produced 32.0 billion pounds of milk, 84.4 percent of the U.S. production.

If producers in the remaining 29 States not surveyed monthly (which include Montana) followed the same pattern as the 21 States, the U.S. production would be 13.3 billion pounds for May 1992.

WINTER WHEAT PRODUCTION PROSPECTS DECLINE

Montana's 1992 winter wheat crop as of June 1 is expected to be 52 million bushels, down 20% from the May 1 forecast. Harvested acres are expected to be 100 thousand acres less than the May 1 estimate. Yield is now expected to average 26 bushels per acre, a 5 bushel drop from the May 1 forecast. Continued stress from lack of rainfall has pulled the crop potential 28% below the 1991 crop. The most severely affected area is the north central part of the state, where more than 40% of the winter wheat acreage is usually grown.

U.S. winter wheat production is forecast at 1.54 billion bushels as of June 1, 1992. This is down 5 percent from the May 1 forecast but 12 percent more than the 1991 crop. A reduction in estimated acres to be harvested, coupled with lower yields from last month, caused the decline. Area for grain is now 42.9 million acres; Colorado, Kansas, Montana, and Nebraska account for the reduction. This acreage level is off 1 percent from May 1 but up 9 percent from last year. Yields are now expected to average 35.9 bushels per acre, 1.4 bushels less than the May forecast but 1.1 bushels per acre more than the 1991 average.

1991 BARLEY COUNTY ESTIMATES

The 1991 barley county estimates will soon be available for distribution. We're publishing the "all barley" figures in this publication, but estimates by class and cropping practice are available from this office upon request by calling 1-800-835-2612.

These estimates are the only county figures published for Montana. They are based on acreage and production surveys conducted last fall. Nearly 5,300 questionnaires were tabulated. The majority were completed by telephone to ensure better coverage in each county. Thanks to those who provided information!

MAY PRICES RECEIVED

The May 1992 index of prices received by Montana farmers and ranchers moved down 5 points from the previous month. The index for all commodities, at 167 percent of its January-December 1977 average, was most influenced by an 11 point decrease in the livestock and livestock products index. There was also a 1 point decline in the all crops index. Compared with last year the all crops index is up 27 points, while the livestock products index is down 20 points.

Commodity prices were down for all crops except durum, other spring wheat and hay. May all wheat averaged $3.67 per bushel, down 3 cents from April. Barley, at $2.06, was down 5 cents per bushel. The all hay price moved up $2.00 to $52.00 per ton, but is still $6.00 below May last year. Livestock price changes were down except for slaughter cows and hogs, with increases of $.70 and $4.40 per cwt, respectively.

The May all farm products index of prices received by U.S. farmers remained unchanged from April at 141 percent based on 1977=100. Price increases for hogs, milk, soybeans, and broilers were offset by price decreases for cattle, grapefruit, tomatoes, and onions.

Fresh apple prices in May continued the trend of record monthly highs which began September 1991. Most field crop prices were down or remained unchanged from April except for hay, soybeans, and sunflowers. Most livestock and livestock product prices were up from the previous month except for all beef cattle, steers and heifers, calves, sheep, and eggs. The all farm products index was 10 points, 6.6 percent below May 1991. Tomato, hog, cattle, and potato prices strongly contributed to the index decline from a year earlier. Higher prices for wheat, milk, corn, and soybeans were partially offsetting.

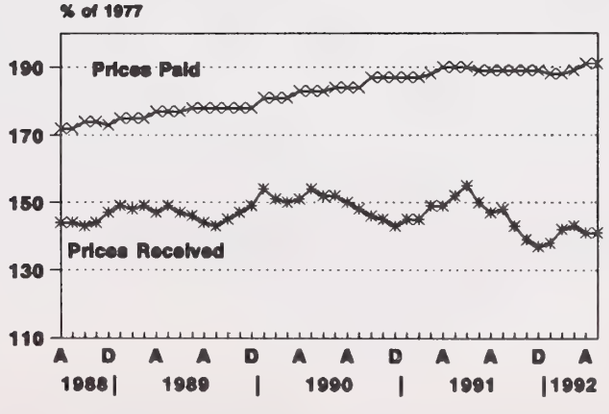
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



JUNE 1 PASTURE & RANGE FEED CONDITION

Montana's pasture and range feed condition rating for June 1 is 64 percent of normal representing the poorest June 1 rating since 1988 when Montana was hit by drought. The June 1 rating is 27 points lower than June 1 of last year and is 13 points below the ten-year average of 1981 through 1990.

The North Central district, with a rating of 11 percent of normal, slid 53 points from the May 1 rating and the Central district, with a rating of 45 percent of normal, slid 47 points from the May 1 rating.

MONTANA'S 1992 CHERRY FORECAST

Montana's 1992 sweet cherry production is forecast at 800 tons which represents a 186 percent increase from 1990 production. There was no commercial production in 1991 due to frost.

Nationally, 1992 sweet cherry production is forecast to be 173,000 tons which represents a 36 percent increase over the 1991 production of 127,200 tons and is 24 percent above the 1990 production.

CATTLE ON FEED DOWN 9 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 states preparing monthly estimates totaled 7.82 million head on May 1, 1992, down 9 percent from a year ago and 4 percent below May 1, 1990.

Placements of cattle and calves on feed in the 7 states during April totaled 1.44 million, up 1 percent from last year and 5 percent above 1990. Net placements of 1.31 million for April were up 1 percent from last year and 6 percent above 1990.

Marketings of fed cattle during April totaled 1.50 million, down 9 percent from last year and 3 percent below two years ago. This is the lowest April marketings since 1983.

Other disappearance totaled 125,000 head compared with 128,000 in April 1991, and 125,000 in April 1990.

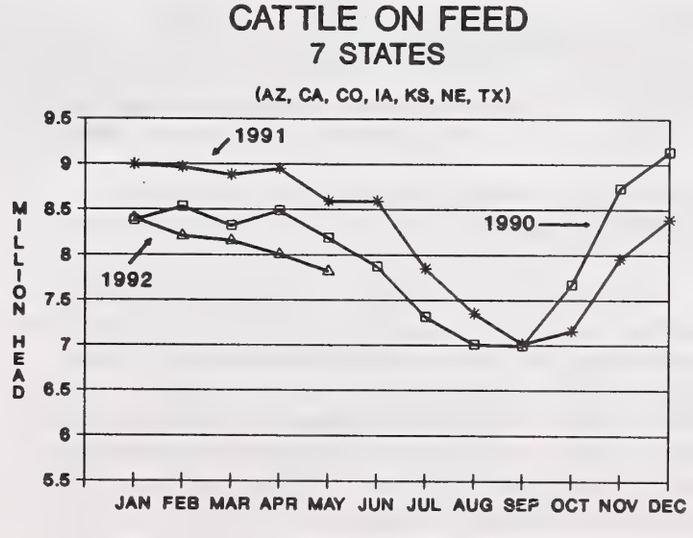
PLEASE RETURN

APRIL MILK PRODUCTION

Milk production in the 21 major states during April totaled 10.9 billion pounds, virtually unchanged from production in these same states in April 1991. March revised production, at 11.1 billion pounds, was virtually the same as March 1991.

Production per cow in the 21 major states averaged 1,320 for April, 23 pounds more than April 1991. The number of cows on farms in the 21 major states was 8.26 million head, 158,000 head less than April 1991 and 4,000 less than March 1992.

During the January-March period, the 21 major states produced 32.0 billion pounds of milk, 84.4 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly (which include Montana) followed the same pattern as the 21 states, the U.S. production would be 12.9 billion pounds for April 1992.



FARM WAGE RATES FOR APRIL

There were 2.87 million people working on the nation's farms and ranches during the week of April 12-18, 1992. Self-employed farm operators accounted for 1.44 million of the total, along with 394,000 unpaid workers, and 837,000 workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 205,000 workers.

Farm operators paid their hired workers an average wage of $6.05 per hour during the April 1992 survey week. This rate was up 24 cents from a year earlier. Workers paid on an hourly basis earned $5.75 per hour compared with $5.44 last April. Field workers received an average of $5.68 per hour, up 23 cents from the April 1991 survey week. Livestock workers earned $5.52 per hour compared with $5.35 a year earlier.

Farm operators in the Mountain I region, which includes **Montana**, Idaho and Wyoming, paid their hired workers an average wage of $5.27 per hour during the April 1992 survey week, up 3 percent from wages of a year ago. Field workers were paid $5.28, 32 cents more than last year, while livestock workers earned $4.93, unchanged from wages of a year ago.

Benefits, such as housing and meals, were provided to 41 percent of the nation's hired workers during the survey week, the same percentage as last year.

POTATO STOCKS

Potato stocks on hand May 1, 1992, in **Montana**, nearing the end of the seed season, totaled 350,000 cwt, representing 13 percent of total production. This is 120,000 cwt more than a year ago. For the **U.S.**, May 1 potato stocks totaled 70.0 million cwt, up 11 percent from last year and 38 percent above two years ago. Stocks contained 19 percent of fall potato production in the 15 storage states, compared with 18 percent last year.

Disappearance from the start of harvest through April totaled a record high 294 million cwt of potatoes, up 4 percent from last year and 11 percent above two years ago. Shrinkage and loss to date is estimated at 28.4 million cwt, 9 percent above the 26.0 million cwt lost last year and 21 percent above two years ago, when losses totaled 23.4 million cwt.

Western potato stocks totaled 54.7 million cwt in the six storage states, up 9 percent from last year and 37 percent above two years ago. Idaho stocks were up 2 percent from last year and accounted for 56 percent of the western holdings. **Montana** has 52 percent more potatoes on hand than last year. Oregon holdings were up 50 percent; Washington stocks were up 8 percent; while Colorado stocks were up 24 percent, but California stocks were off 8 percent.

1991 MILK PRODUCTION, DISPOSITION & INCOME

Milk production for the nation increased slightly in 1991 to 149 billion pounds. The rate per cow, at 14,867 pounds, was 222 pounds above 1990. The annual average number of cows on farms, at 9.99 million head, was 137 thousand less than the 1990 average.

Cash receipts from marketings of milk during 1991, at 18.1 billion dollars, was 10 percent below 1990. Producer returns averaged $12.34 per hundredweight, $1.47 per hundredweight below the 1990 average. Marketings totaled 147 billion pounds, up slightly from 1990. Marketings include whole milk and producer separated cream sold to plants and dealers as well as milk sold directly to consumers.

An estimated 2.03 billion pounds of milk were used on farms where produced, 1 percent below 1990. Calves were fed 75 percent of this milk with the remainder consumed in producer households as milk, cream, and butter.

In **Montana** during 1991, 24,000 milk cows produced an average of 14,200 pounds of milk per cow. The average number of milk cows on farms remained unchanged from 1990, while the average production per cow was 658 pounds higher than last year's average. Total milk production was 341 million pounds in 1991, 5 percent more than in 1990.

Cash receipts from marketings of milk during 1991, at 42.2 million dollars, was 6 percent higher than 1990. Sixteen million pounds of milk were utilized on farms where produced, calves were fed 63 percent of that total, with the rest consumed in producer households as milk, cream and butter.

APRIL EGG PRODUCTION UP 3 PERCENT

U.S. egg production totaled 5.82 billion during April 1992, up 3 percent from the 5.64 billion produced a year ago. Production included 5 billion table eggs, 759 million broiler-type hatching eggs, and 65 million egg-type hatching eggs. The total number of layers during April averaged 277 million, up 2 percent from a year ago. April egg production per 100 layers was 2,101 eggs, compared with 2,077 in April 1991.

All layers in the U.S. on May 1, 1992, totaled 276 million, up 2 percent from a year ago. The 276 million layers consisted of 231 million layers producing table or commercial type eggs, 42 million layers producing broiler-type hatching egg and 2.95 million layers producing egg-type hatching eggs. Rate of eggs laid per day on May 1, 1992, averaged 69.4 eggs per 100 layers, up 1 percent from last year's 68.4 eggs per 100 layers.

Laying flocks in the 20 major egg production states produced 4.79 billion eggs during April, up 3 percent from the 4.63 billion produced a year ago. The number of layers during April 1992 averaged 227 million, up 2 percent from the 224 million a year ago.

Data for the 30 quarterly states (which include **Montana**) were estimated based on the percent change in the 20 states conducting monthly surveys. These monthly states accounted for about 82 percent of the U.S. egg production during the 3-month period, December 1991 through February 1992.

RED MEAT PRODUCTION DOWN 2 PERCENT

Montana slaughter plants produced 1.3 million pounds of red meat in April of 1992. This is an 8 percent increase from March, but is a 2 percent decline from production of a year ago.

The number of cattle slaughtered in the state totaled 1,400, down 100 from last year. Average live weight of cattle was 1,167 pounds, 13 pounds less than the average in April 1991. There were 2,400 hogs slaughtered in April, unchanged from last year. Average live weight of hogs slaughtered was 239 pounds, 6 pounds heavier than last year's average. A total of 200 lamb and mutton animals were slaughtered, 100 less than last year. Average live weight was 127 pounds, the same weight as last April.

Commercial red meat production for the **United States** during April totaled 3.26 billion pounds, 1 percent below a year earlier. Beef production totaled 1.79 billion pounds. This was down 5 percent from a year earlier. Head kill totaled 2.59 million, down 6 percent. The average live weight increased 10 pounds to 1,154.

Veal production, at 25 million pounds, was up 10 percent. Calf slaughter totaled 110,700 head, up 3 percent. The average live weight increased 30 pounds to 390.

Pork production, at 1.41 billion pounds, was up 4 percent from a year earlier. Hog kill totaled 7.79 million head, up 4 percent from last year. The average live weight remained the same at 252 pounds.

Lamb and mutton production, at 33 million pounds, was up 14 percent from last year. Slaughter totaled 525,700 head, up 15 percent. The average live weight decreased 4 pounds to 123.

January-April red meat production was 13.3 billion pounds, up 5 percent from the comparable period a year earlier. Accumulated beef production was up 2 percent; veal was up 1 percent; pork was up 9 percent; but lamb and mutton was down 2 percent.

1991 U.S. MANUFACTURED DAIRY

Production of butter in the **United States** during 1991 totaled 1.34 billion pounds 3 percent more than was produced in 1990. Wisconsin, the leading state, accounted for 26 percent of production followed by California with 23 percent and Washington with 8 percent.

Total cheese production, excluding cottage cheeses, was 6.09 billion pounds, 0.4 percent above the 1990 production. Wisconsin was the leading state with 32 percent of the production.

American type cheese production, at 2.80 billion pounds, was 3 percent below 1990 and accounted for 46 percent of total cheese in 1991.

Italian varieties continued their increase to a record 2.33 billion pounds, 5 percent above the 1990 production. Mozzarella accounted for 78 percent of the Italian production followed by ricotta with 9 percent and provolone with 7 percent. Wisconsin was the leading state in Italian cheese production with 33 percent of the production.

Creamed cottage cheese, at 498 million pounds, was down 6 percent from 1990, while lowfat cottage cheese, at 321 million pounds, was up 6 percent.

Frozen dairy products were mixed in 1991. Ice cream production totaled 863 million gallons, up 5 percent. Ice milk, at 335 million gallons, was down 5 percent. Milk sherbet, at 47.4 million gallons, was down 6 percent. Frozen yogurt production, at 147 million gallons, was up 25 percent. The 259 million gallons of soft products (ice cream, ice milk, sherbet, and mellorine) made during 1991 accounted for 22 percent of the total frozen dairy products, excluding yogurt. Soft frozen dairy products are sold from direct-serve soft freezer and milk shake machines.

Nonfat dry milk for human food production, at 878 million pounds, was virtually unchanged from the 1990 production. Dry buttermilk production, at 59.9 million pounds, was up 7 percent.

WINTER WHEAT PRODUCTION AND HAY STOCKS

Montana's wheat growers expect to harvest 89 percent of the winter wheat planted last fall. Based on May 1 conditions, 2.1 million acres remain for harvest, up 17 percent from last year. Moisture is short to adequate in the major growing areas of the state, with above normal insect activity also stressing the crop. Some of Montana's winter wheat has been reseeded to spring wheat where favorable moisture existed, but poor stands will remain where dryness discourages reseeding.

Montana's winter wheat production is forecast at 65.1 million bushels, down 10 percent from last year. This year's winter wheat projected yield, at 31 bushels per acre, is down 9 bushels from last year.

For the nation, winter wheat production is forecast at 1.62 billion bushels, up 18 percent from 1991. Yields are expected to average 37.3 bushels per acre, up 2.5 bushels from last year. The area to be harvested as grain is expected to total 43.3 million acres, up 10 percent from the previous year. Colorado's yield prospects are good, but additional moisture is needed to sustain the crop. In Kansas, the biggest concern is the shortness of soil moisture in the western third of the state.

Hay stocks on Montana farms as of May 1, 1992, were 1,349 thousand tons, up 20 percent from hay stocks on May 1, 1991, and up 51 percent from the May 1, 1990, stocks level. This year's stocks were 26 percent of 1991 production.

Nationally, hay stocks on farms totaled 28.6 million tons on May 1, 1992, up 6 percent from May 1 of the last 2 years. Disappearance of hay during the December 1, 1991-May 1, 1992 period totaled 82.9 million tons. This compares with 77.9 million tons during the same period a year earlier.

A toll free number is now available to potential buyers or sellers of Montana hay or pasture. Call 1-800-722-3276 for information.

1991 CATTLE AND CALVES LOSSES

Montana cattle death losses from all causes during 1991 totaled 26,000 head and calf death losses were placed at 60,000 head. Cattle killed by predators represented 1.2 percent of the total cattle losses. Calves lost due to predators were 3.0 percent of the total calves lost. Causes of death reported as a percent of total death losses were: digestive problems, cattle 15.4%, calves 27.0%; respiratory problems, cattle 15.4%, calves 15.8%; calving problems, cattle 11.5%, calves 22.3%; weather, cattle 13.8%, calves 15.0%; poison, cattle 5.4%, calves 0.7%; thefts, cattle 1.2%, calves 0.7%; other and unknown, cattle 36.2%, calves 15.5%.

Coyotes killed two-thirds of the calves lost to predators. Mountain lions and bobcats caused a third of the cattle predator losses and 11.1% of the calf losses. Dogs caused 5.6% of the calf losses while all other predators caused two thirds of the cattle and 6.3% of the calf losses. The value of cattle losses were placed at $19.9 million with predator losses accounting for $230,000 of the total. Calf losses were valued at $19.8 million with $595,000 attributed to predator losses.

A total of 4.37 million head of cattle and calves were lost from all causes during 1991 in the **United States**, excluding Alaska. Predators accounted for 106,000 head or 2.4 percent, while other causes made up the remainder. These total losses cost ranchers and farmers a total of $2.11 billion with predator losses at $41.5 million and other losses at $2.07 billion.

Coyotes were the largest cause of cattle and calf predator losses at 65,900 head or 61.9 percent of the total loss to predators. The value of coyote losses was $24.3 million. Dogs were the second leading cause of predator losses, accounting for 18.4 percent of predator losses. The western and mountain region accounted for 69.2 percent of all predator losses.

Respiratory problems lead the other causes with 31.1 percent of the total deaths. The value of these losses was $624 million. The second leading other cause of deaths in cattle and calves was digestive problems with 20.6 percent of the total. The value of these losses was $395 million.

This report is a cooperative effort between the National Agricultural Statistics Service, APHIS-Animal Damage Control and APHIS-National Animal Health Monitoring System. Data came from the January Livestock Survey, THANKS! to the nearly 1,800 Montana livestock producers that participated.

MAY 1 PASTURE & RANGE FEED CONDITION

Montana pasture and range feed condition for May 1 was reported at 86% percent of normal, 9 points above last year. Range and pasture condition ratings were above last year in all areas except the north central which was 15 points below May 1, 1991. Moisture is badly needed to sustain early grass growth prompted by the warm spring weather. April rains in eastern Montana have improved condition ratings in that area to the best they've been in several years.

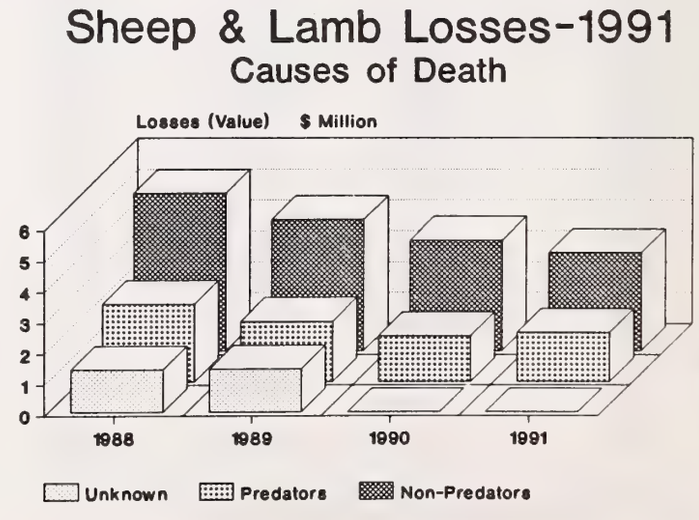
MONTANA SHEEP AND LAMB LOSSES--1991

Montana sheep producers lost 142,000 sheep and lambs to weather, predators, disease and other causes during 1991, representing a total value of $5.3 million. Despite an increase of 7 percent in total head lost from 1990, the total value of inventory lost in 1991 decreased $417,000 from the previous year, largely due to a decrease in sheep and lamb prices.

Predators caused a $1.6 million loss, while non-predator factors caused $3.2 million and unknown causes claimed $550,400. Coyote predation remained the single largest cause of death with a $1.2 million loss. This accounts for 22 percent of the total value of death losses in the state.

Lambs killed by all predators amounted to 34,500, up 10 percent from last year. Sheep killed by predators totaled 10,400, up 37 percent. Lambs lost to weather, disease and other non-predator causes totaled 57,200, up 8 percent from 1990. Sheep losses to non-predator factors totaled 26,300, 3 percent less than last year. Lambs lost to unknown causes were 8,300 down 3 percent, and sheep were 5,300 down 2 percent from last year.



APRIL PRICES RECEIVED

The April 1992 index of prices received by Montana farmers and ranchers moved up 3 points from March. This index of all farm products, at 177 percent of its January-December 1977 average, was most influenced by a 9 point increase in the all crops index.

The all crops index, at 152, was 32 points higher than a year ago. The mid-April all wheat price averaged $3.77, up 25 cents per bushel from March and $1.12 above April a year ago. Barley was $2.08 per bushel, down 1 cent from last month and 44 cents below the previous year. Oats, at $1.31 per bushel, were the same as April 1991 but down 9 cents from last month. Alfalfa hay prices increased $1.00 per ton to $51.00.

The all livestock index, at 199, was down 5 points from last month, and was 7 points lower than a year ago. Cow prices, at $51.80 per cwt, were down $1.30 per cwt from last month and $2.10 below a year ago. Calves, at $89.50, were down 90 cents from March and $11.50 less than a year ago. Steer and heifer prices increased 90 cents to $80.80 per cwt, $4.30 less than April 1991. Sheep, at $29.50 per cwt, were up $1.00 from March, while lambs rose $4.40 to $64.00.

Nationally, the April all farm products index of prices received moved down 1 point from March to 142 based on 1977=100. Price decreases in tomatoes, tobacco, sweet corn, and corn more than offset increases in hogs, potatoes, onions, and oranges. The index was 6 points below April 1991. Cattle, hogs, cotton, and peanut prices strongly contributed to the index decline. Higher wheat, milk, onion, and apple prices were partially offsetting.

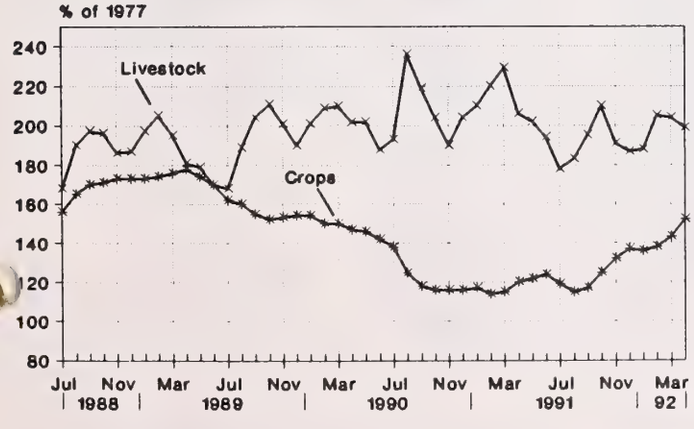
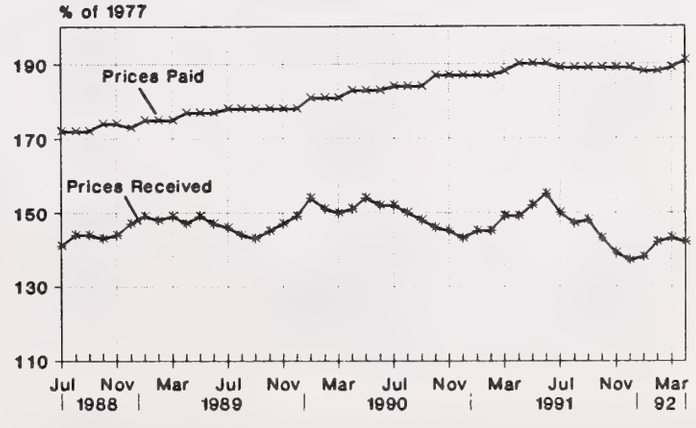
MONTANA CROP & LIVESTOCK PRICES RECEIVED INDEXES



UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



MONTANA EGG RECEIPTS DOWN

Montana egg sales brought 7 percent less value to producers in 1991 compared with 1990. Value of production at $9.0 million was derived from 164 million eggs produced. The average price received by producers in 1991 was 66 cents per dozen compared with 68 cents in 1990.

The combined value of U.S. production from broilers, eggs, and turkeys and the value of sales from chickens in 1991, was $14.7 billion, down 1 percent from the $14.8 billion in 1990. Of the combined total, 57 percent was from broilers, 26 percent from eggs, 16 percent from turkeys, and less than 1 percent from other chickens.

The value of broilers produced during 1991 was $8.39 billion, up slightly from the $8.37 billion in 1990. The total number of broilers produced in 1991 was 6.14 billion, up 5 percent from 1990. The increased production was offset by lower prices. The 1991 average price per pound on a live weight equivalent basis was 30.8 cents per pound, compared to 32.6 cents per pound in 1990.

Value of egg production in 1991 was $3.86 billion, down 4 percent from the $4.01 billion in 1990. Egg production totaled 69.0 billion eggs, up 2 percent from the 67.9 billion eggs produced in 1990. In 1991, eggs averaged 67.2 cents per dozen, compared with 70.9 cents in 1990.

The value of turkeys produced during 1991 was $2.34 billion, down 1 percent from the $2.38 billion the previous year. Turkey production in 1991 totaled 6.11 billion pounds live weight, compared with 6.03 billion pounds in 1990. The prices received by producers during 1991 averaged 38.4 cents per pound of live weight, compared with 39.4 cents a year earlier.

The value of sales from chickens (excluding broilers) in 1991 was $67.5 million, down 25 percent from the $90.3 million a year ago. Prices averaged 7.2 cents per pound compared with 9.3 cents in 1990.

1991 WHEAT COUNTY ESTIMATES

The 1991 wheat county estimates will soon be available for distribution. We're publishing the "all wheat" figures in this publication, but estimates by class and cropping practice are available from this office upon request by calling 1-800-835-2612.

These estimates are the only county figures published for Montana. They are based on acreage and production surveys conducted last fall. Nearly 5,300 questionnaires were tabulated. The majority were completed by telephone to ensure better coverage in each county. Thanks to those who provided information!

1991 MEAT ANIMAL PRODUCTION, DISPOSITION, AND INCOME

Total 1991 marketings of meat animals in Montana was 1,045.4 million pounds, a 9 percent drop from 1990 marketings. Cash receipts from marketings was $721.6 million compared with $812.6 million last year. Cattle cash receipts declined 11 percent from 1990 and hogs cash receipts were down 13 percent, but cash receipts for sheep and lambs were up 2 percent from 1990. The value of Montana's meat animal production was $806.6 million, up 4 percent from 1990 which reflects the increase in cattle numbers.

Cattle and calves, hogs and pigs, and sheep and lamb marketings for the U.S. in 1991 were all above 1990, resulting in total marketings of meat animals at 2 percent above 1990. However, U.S. prices received were higher only for calves between 1990 and 1991, resulting in total cash receipts of $51.1 billion for all meat animals, down 2 percent from 1990. The percentage breakdown of total U.S. cash receipts from marketings of meat animals by species in 1991 were: cattle and calves, 77%; hog and pigs, 22%; sheep and lambs, 1%.

Production of meat animals during 1991 totaled 65.0 billion pounds, up 4 percent from the 1990 production of 62.5 billion pounds. The value of meat animal production was $42.0 billion in 1991, up fractionally from 1990.

1/ Counties with less than 500 acres planted of one class of wheat are combined into "other" counties to avoid disclosure of individual information.
2/ Planted acress less winter wheat acres replanted to spring wheat.

MARCH RED MEAT PRODUCTION

Montana slaughter plants produced 1.2 million pounds of red meat in March 1992. This is a 3 percent decrease from February but is a 17 percent increase from production of a year ago. The number of cattle slaughtered, at 1,300 head, is up 100 from last year. Average live weight of cattle slaughter was 1,163 pounds, an increase of 98 pounds from March 1991.

A total of 2,400 hogs were slaughtered, 400 more than last year. Average live weight was 234 pounds, compared with 219 a year ago. There were 200 head of sheep and lambs slaughtered, the same as last March. Average live weight of lamb and mutton animals was 126 pounds.

Commercial red meat production for the **United States** totaled 3.38 billion pounds, 10 percent above a year earlier. Beef production totaled 1.85 billion pounds. This was up 8 percent from a year earlier. Head kill totaled 2.67 million, up 6 percent. The average live weight increased 4 pounds to 1,160. Veal production, at 27.0 million pounds, was up 9 percent. Calf slaughter totaled 122,400 head, up 1 percent. The average live weight increased 32 pounds to 382.

Pork production, at 1.47 billion pounds, was up 13 percent from a year earlier. Hog kill totaled 8.12 million head, up 13 percent from last year. The average live weight increased 1 pound to 251. Lamb and mutton production, at 32.0 million pounds, was down 10 percent from last year. Slaughter totaled 496,800 head, down 12 percent. The average live weight increased 3 pounds to 129.

MARCH U.S. EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 6.03 billion during March 1992, up 2 percent from the 5.91 billion produced a year ago. Production included 5.19 billion table eggs, 774 million broiler-type hatching eggs, and 69.0 million egg-type hatching eggs. The total number of layers during March averaged 278 million, up 2 percent from a year ago. March egg production per 100 layers was 2,167 eggs, compared with 2,169 in March 1991.

All layers in the U.S. on April 1, 1992 totaled 278 million, up 3 percent from last year's 271 million layers. The 278 million layers consisted of 234 million layers producing table or commercial type eggs, 41.5 million layers producing broiler-type hatching eggs, and 3.09 million layers producing egg-type hatching eggs. Rate of lay per day on April 1, 1992, averaged 70.5 eggs per 100 layers, up fractionally from last year's 70.3 eggs.

Laying flocks in the 20 major egg production states produced 4.96 billion eggs during March, up 2 percent from the 4.89 billion produced a year ago. The number of layers during March averaged 228 million, up 1 percent from the 225 million a year ago.

Data for the 30 quarterly states (which include **Montana**) were estimated based on the percent change in the 20 states conducting monthly surveys. These monthly states accounted for about 82 percent of the U.S. egg production during the 3-month period, December 1991 through February 1992.

JANUARY - MARCH MILK PRODUCTION

Montana dairymen produced 84 million pounds of milk in the January-March quarter of 1992 equaling production from the same quarter last year. The average number of milk cows on farms remains unchanged from 1991, at 24,000 head. Milk production per cow continues to increase with the 3-month average of 3,520 pounds compared with 3,490 pounds for the 1991 quarter.

Producers fed an average of 16 pounds of grain and other concentrates per cow on April 1, 1992, the same average as last year. The value of grain and concentrates fed was $7.20 per cwt, up 25 cents from 1991.

The quarterly production of milk for the **U.S.** was 37.9 billion pounds, 1 percent above the January-March period last year. The average number of milk cows in the U.S. during the January-March quarter was 9.85 million head, 247 thousand less than the same period last year.

Grain and other concentrates fed to milk cows on April 1, 1992, averaged 18.1 pounds, one-tenth of a pound more than on April 1, 1991. Value of grain and other concentrates fed to cows on April 1, averaged $7.76 per cwt, $0.01 less than the April 1, 1991, price.

FARMLAND VALUES UP 4 PERCENT

Real estate values in **Montana** rose 4 percent in 1991. The average real estate per acre value on January 1, 1992, was $252 per acre compared with $243 last January. This year's value is 26 percent above the 10-year low of $200 for 1987. The average value includes farmland and buildings.

The per acre value of **U.S.** farm real estate gained 1 percent during 1991, the fifth consecutive increase since its downward slide ended in 1987. On January 1, 1992, the value of farmland and buildings average $685 per acre, 14 percent above the 1987 low of $599, but 17 percent below the record $823 in 1982. Value increases recently leveled off, averaging only 1 to 2 percent annually during 1990 to 1992. However, regional and state value changes showed more variation.

With inflation averaging 3.6 percent in 1991, the inflation-adjusted per acre value of U.S. farm real estate fell 3 percent below January 1991. Real values have trended lower since 1981, and are currently 49 percent below the 1981 peak.

Investors looking at farmland try to forecast economic conditions several years into the future. Many developments in 1991 did not lend support to higher U.S. farmland values. Following substantially higher farm incomes in 1989 and 1990, net cash income fell 8 percent in 1991 and net farm income dropped 17 percent. Even though nominal interest rates declined in 1991, inflation-adjusted rates remained high. Financial factors pointed to a leveling off in recent declines in farm debt and debt-to-asset ratios. Sluggish national and regional economies lessened demand for farmland for nonagricultural uses, particularly near urban centers. Also, some areas experienced severe drought, particularly portions of California and other western states.

APRIL 1 POTATO STOCKS

Montana producers had 1.7 million cwt of potatoes in storage as of April 1, 1992, compared with 1.4 million cwt a year ago. These April 1 stocks represent 61 percent of 1991 production.

U.S. potato stocks totaled 110 million cwt on April 1, 1992, up 8 percent from last year and 30 percent above two years ago. Stocks made up 30 percent of fall potato production in the 15 storage states, compared with 29 percent a year ago. Seasonal disappearance was 254 million cwt, 5 percent more than last year. Processor usage of 117 million cwt of potatoes was up 1 percent from last year. Shrinkage and loss to date was 25.8 million cwt, 7 percent above last year.

Western potato stocks totaled 82.8 million cwt in six states, up 6 percent from last year and 28 percent above two years ago. Idaho stocks were the same as last year and accounted for 56 percent of the western holdings. Montana stocks, which are mostly seed potatoes, were 21 percent higher than a year ago. Washington stocks were up 7 percent, Oregon was up 32 percent, and Colorado was up 23 percent from a year ago. California stocks were off 5 percent.

CATTLE ON FEED DOWN 10 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed for slaughter market in the 13 states preparing quarterly estimates totaled 9.70 million head, down 10 percent from a year ago and 4 percent below April 1, 1990. The inventory included 6.33 million steers and steer calves, 10 percent below a year ago. This group accounts for 65.3 percent of the total inventory. Heifers and heifer calves accounted for 3.31 million head, 9 percent below a year ago.

Placements of cattle and calves on feed in the 13 states during the January-March 1992 quarter totaled 5.39 million, down 5 percent from last year and 10 percent below January-March 1990. Net placements of 4.99 million for January-March was down 5 percent from last year and 11 percent from 1990.

Marketings of fed cattle during the January-March 1992 quarter totaled 5.42 million, up 2 percent from last year but 1 percent below two years ago. Other disappearance totaled 404,000 head compared to 462,000 in January-March 1991 and 385,000 in January-March 1990.

FEBRUARY RED MEAT PRODUCTION

Montana slaughter plants produced 1.3 million pounds of red meat in February 1992. This is a 16 percent decrease from January, but is a 15 percent increase from production of a year ago.

The number of cattle slaughtered in the state, at 1,400 head, is up 100 from last year. Average live weight of cattle slaughter was 1,140 pounds, an increase of 60 pounds from February, 1991.

A total of 2,300 hogs were slaughtered, 500 more than last year. Average live weight was 240 pounds, compared with 215 a year ago. Sheep and lamb slaughter was 300 head, up 100 from February 1991. Average live weight of lamb and mutton animals decreased 4 pounds from last year to 126 pounds.

Commercial red meat production for the **United States** totaled 3.09 billion pounds, 5 percent above a year earlier. Beef production totaled 1.71 billion pounds. This was up 1 percent from a year earlier. Head kill totaled 2.44 million, down 1 percent. The average live weight increased 11 pounds to 1,173.

Veal production, at 25.0 million pounds, was down 3 percent. Calf slaughter totaled 113,000 head, down 8 percent. The average live weight increased 28 pounds to 374. Pork production, at 1.33 billion pounds, was up 10 percent from a year earlier. Hog kill totaled 7.33 million head, up 10 percent from last year. The average live weight increased 2 pounds to 252.

Lamb and mutton production, at 28.0 million pounds, was down 6 percent from last year. Slaughter totaled 436,300 head, down 5 percent. The average live weight decreased 1 pound to 128. January-February red meat production was 6.71 billion pounds, up 5 percent from the comparable period a year earlier. Accumulated beef production was up 2 percent while veal was down 6 percent, pork was up 10 percent, and lamb and mutton was down 5 percent.

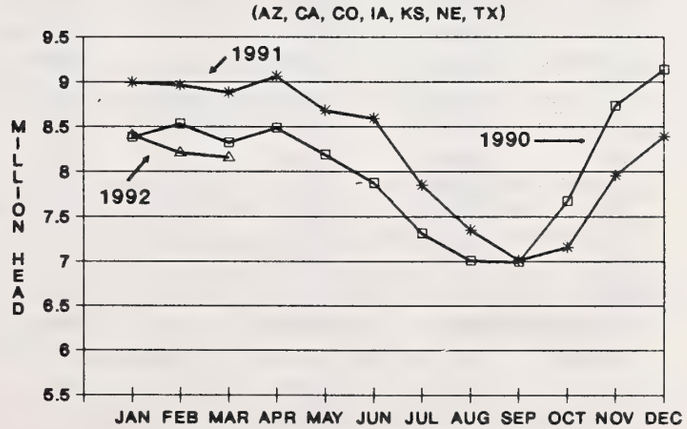
CATTLE ON FEED DOWN 8 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market in the 7 states preparing monthly estimates totaled 8.16 million head, down 8 percent from a year ago and 2 percent below March 1,1990.

Placements of cattle and calves on feed in the 7 states during February totaled 1.47 million, up 1 percent from last year and 6 percent above 1990. Net placements of 1.35 million for February were up 1 percent from last year and 5 percent above 1990.

Marketings of fed cattle during February totaled 1.40 million, down 2 percent from last year and 6 percent below two years ago. This is the lowest February marketings since 1975. Other disappearance totaled 120,000 head compared to 113,000 in February 1991 and 95,000 in February 1990.

CATTLE ON FEED
7 STATES
(AZ, CA, CO, IA, KS, NE, TX)



SLAUGHTER AND RED MEAT PRODUCTION 1991

Red meat production in **Montana** totaled 16.6 million pounds during 1991. Commercial cattle slaughter totaled 18,700 head, with an average live weight of 1,145 pounds. Hog slaughter totaled 28,200 head, with an average live weight of 235 pounds. A total of 4,400 lamb and mutton animals were slaughtered, with an average live weight of 124 pounds.

Red meat production for the **United States** during 1991 totaled 39.6 billion pounds, up 2 percent from 1990. Production included beef, veal, pork, and lamb and mutton slaughter in commercial plants and on farms.

Beef production was 22.9 billion pounds, up 1 percent from 1990. Veal production was 306 million pounds, down 6 percent from 1990. Pork production was 16.0 billion pounds, up 4 percent from 1990. Lamb and mutton production totaled 362 million pounds, unchanged from 1990.

Commercial cattle slaughter during 1991 totaled 32.7 million head, down 2 percent from 1990, with federal inspection comprising 97.5 percent of the total compared with 97.4 last year. Calf slaughter, at 1.44 million head, was down 20 percent from the previous year with 97.4 percent under federal inspection. Hog kill totaled 88.2 million head, up 4 percent from 1990 with federal inspection comprising 97.5 percent. Commercial sheep and lamb slaughter, at 5.72 million head, was up 1 percent from 1990 with federal inspection comprising 96.2 percent.

Average live weight of cattle slaughtered commercially in 1991 was 1,163 pounds, up 27 pounds from 1990. The calf average live weight was 346 pounds for 1991, an increase of 63 pounds from the previous year. The average live weight for hogs increased 3 pounds to 252. Sheep and lambs averaged 124 pounds live weight, down 1 pound from 1990.

1/ Months may not add to totals due to rounding. 2/ Excludes lard and rendered pork fat. 3/ Based on packers' dressed weight and excludes farm slaughter.

FEBRUARY MILK PRODUCTION

Milk production in the 21 major states during February totaled 10.2 billion pounds, 3 percent above the production in these same states in February 1991. January revised production, at 10.7 billion pounds, was slightly above January 1991.

Production per cow in the 21 major milk producing states averaged 1,230 pounds for February, 61 pounds more than February 1991. February 1992 had 29 days. The number of cows on farms in the 21 major states was 8.27 million head, 214 thousand head less than February 1991 and 26 thousand less than January 1992.

During the October-December period, the 21 major states produced 30.6 billion pounds of milk, 84.6 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 states, the U.S. milk production would be 12.0 billion pounds for February 1992.

EGG PRODUCTION

Montana laying flocks produced 40 million eggs during the December 1991 through February 1992 quarter, compared with 38 million during the same quarter last year. Layers in the 1992 quarter averaged 610,000 compared with 580,000 in 1991.

The **Nation's** laying flocks produced 17.5 billion eggs during the December through February quarter, up 3 percent from the corresponding quarter a year ago. Production included 15.0 billion table eggs, 2.24 billion broiler-type hatching eggs, and 187 million egg-type hatching eggs. Layers for the quarter averaged 279 million, up 2 percent from the 273 million a year ago.

All layers in the **U.S.** on March 1, 1992, totaled 278 million, compared with 273 million a year ago. The 278 million layers consisted of 234 million layers producing table or commercial type eggs, 41.2 million layers producing broiler-type hatching eggs and 3.07 million layers producing egg-type hatching eggs. Rate of lay per day on March 1, 1992, averaged 69.3 eggs per 100 layers compared with 69.5 for March 1, 1991.

MARCH 1 POTATO STOCKS

Montana producers had 2.3 million cwt of potatoes in storage as of March 1, 1992, compared with 1.9 million a year ago. The March 1 stocks represent 82 percent of 1991 production.

Western potato stocks totaled 108 million cwt in six states, up 7 percent from last year and 24 percent above two years ago. Idaho stocks were up 2 percent from last year and accounted for 55 percent of the western holdings. Montana, with seed potatoes, was up 21 percent. Washington stocks were up 7 percent, Oregon was up 29 percent, and Colorado was up 19 percent from a year ago. California stocks were off 4 percent.

Potato stocks in the **U.S.** on March 1 totaled 146 million cwt, up 9 percent from a year ago and 25 percent above two years ago. Disappearance was a record high 218 million cwt of potatoes this season, up 4 percent from last year. Shrink and loss of 23.3 million cwt was 5 percent above a year ago. Processor usage, at 101 million cwt of potatoes for the season, was down slightly, although the amount processed in February was up 8 percent.

AGRICULTURAL CHEMICAL USE

The second annual field crops summary issued by the National Agricultural Statistics Service (NASS), containing on-farm agricultural chemical use statistics, is now available. The data presented in this report are part of the data series on chemical use funded through the President's Water Quality Initiative.

The Water Quality Initiative is a multi-agency program designed to provide information for farmers, ranchers, and foresters to address on-farm and off-farm environmental issues. In the past, there has been an inadequate amount of farm level data to determine the magnitude of water quality problems or to permit an assessment of alternatives for farmers and other affected parties.

This report and other agricultural chemical reports help fill the needs of analysts evaluating the complex environmental issues of the 1990's. It includes farm use of fertilizers and pesticides during 1991 on corn, cotton, peanuts, potatoes, rice, sorghum, soybeans, and wheat. New in this year's report is pesticide and fertilizer usage on peanuts and sorghum.

Wheat Highlights

• About 84 percent of the winter wheat acres in the 15 states surveyed was treated with nitrogen fertilizer. Colorado and South Dakota were the only states where growers treated less than 70 percent of the acres harvested. The average number of applications was 1.5 and averaged 43 pounds per application. Phosphate fertilizer was used in all states surveyed, with about 50 percent of the acreage being treated. The percent coverage was above 90 percent in Illinois and Ohio, but was only 11 percent in Oregon. The average number of applications and pounds per application was 1.0 and 39, respectively. Potash was used on 19 percent of the acreage in the 15 state area, with producers in soft red winter states treating the highest percentages.

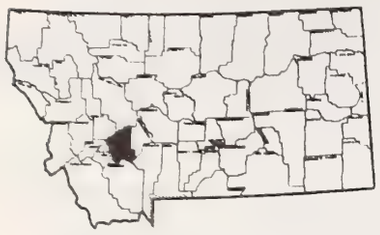
• Producers in all surveyed states treated some portion of their harvested area with herbicides. The two most commonly used herbicides were 2,4-D and chlorsulfuron, which were used on 13 and 9 percent of the acreage, respectively. Percentage of acreage treated with herbicides was highest in the Pacific Northwest and **Montana.** Insecticide and fungicide use on winter wheat was low overall.

• The percent of spring wheat acres treated with fertilizer in the 4 states surveyed (MN, **MT**, ND, SD) averaged 72, 63, and 23 percent for nitrogen, phosphate, and potash, respectively. Minnesota had the highest percent of area treated for all three primary plant nutrients.

• Herbicides were widely used on spring wheat in all states; none had less than 85 percent of the planted area treated. The two most commonly used herbicides were 2,4-D and MCPA, which were used on 56 percent and 38 percent of the acreage, respectively. In **Montana,** Dicamba replaced MCPA as the second most commonly used herbicide. Insecticide and fungicide applications were limited.

Call our office at (800) 835-2612 if you would like more information.

featuring...JEFFERSON COUNTY



Created in February of 1865, Jefferson County is one of the original counties of the Territory of Montana. With a land area of 1,060,172 acres, it has within its boundaries parts of the Deer Lodge and Helena National Forests. The Boulder River traverses the county from west to east.

In 1989, all cash receipts from farming in Jefferson County totaled $11,967,000. That figure brought the county a ranking of 49th place. Livestock receipts were $7,289,000 and ranked 46th, while crops brought in $3,704,000 and ranked 42nd. Government payments made up the rest of the total with $974,000.

Jefferson County ranked 42nd for cattle on January 1, 1990, and 37th for hog numbers on December 1, 1989, and 45th for sheep on January 1, 1990. The county ranked 18th for hay production and 29th for oats production in 1990. Some barley and wheat are also grown.

MONTANA WHEAT & BARLEY MOVEMENT

Montana **wheat** shipped to out-of-state destinations in June-November 1991, at 65.0 million bushels, was 11 percent above the same period last year.

Shipments to western destinations (primarily export facilities of Washington and Oregon) were 14 percent above the previous June-November period. Wheat movement to eastern destinations was down 36 percent. Shipments to other destinations (primarily Colorado and Arizona) were down 28 percent. Rail movement amounted to 59.7 million bushels, up from 52.3 million shipped by rail during the same period in 1990. Trucks carried 5.4 million bushels compared with 6.3 million the previous June-November period.

Montana **barley** shipped to out-of-state destinations in June-November 1991 was 7.8 million bushels, down 56 percent from the same period last year. Barley shipped west amounted to 6.3 million bushels, down 58 percent from the 14.9 million bushels in the June-November 1990 period. Eastern shipments totalled 1.5 million bushels, down 45 percent from the 2.7 million bushels the previous year. Movement to other destinations, totalling 89,000 bushels, was down 63 percent from the same period last year.

MONTANA'S RANK HIGHLIGHTS

- Production figures increased in rank from 1990 for all crops except: barley, alfalfa hay, dry beans and sugar beets which remain unchanged in rank. All in all, 1991 was an outstanding year. If acreage planted would have been at normal levels, our production increases would be more noticeable.

- The biggest increase in livestock ranking appeared for hogs and pigs which jumped from 35th position to 24th. The others weren't quite as dramatic--all cows rose in rank from 9 to 8, wool production increased from 5 to 4, and honey climbed from 9 to 7, while all others remained constant.

- Egg production is the only commodity that fell in rank from 1990, dropping from 40 to 41.

PRESS RELEASE PRICES RECEIVED

Montana farmers received higher prices during mid-February for most of the products they sold compared with a month earlier. The mid-February all farm products index of prices received increased 18 points from the whole month of January. The index, at 181 (1977 = 100), was 12 points higher than a year earlier.

The all crops index, at 159, was 23 points higher than January, and 45 points higher than a year ago. All cereal grains showed increases at mid-February compared with January. The mid-February all wheat price averaged $3.92, up 67 cents per bushel from January and $1.39 above February a year ago. The all wheat price has not been above $3.90 since July of 1989. Barley was $2.36 per bushel, up 11 cents from last month and 11 cents above the previous year. Oats, at $1.44 per bushel, were up 2 cents from January and 16 cents above February 1991. Alfalfa hay prices decreased $1.00 per ton to $50.

The all livestock index, at 203, was up 15 points from last month, but was 17 points lower than a year ago. Cow prices, at $49.70 per cwt, were up $1.70 per cwt from last month but $4.50 below a year ago. Calves, at $91.60, were up $3.70 from January but $13.40 less than a year ago. Steer and heifer prices increased $3.50 to $83.10 per cwt, $6.60 less than February 1991. Sheep, at $28.00 per cwt, were up 10 cents from January, while lambs rose $3.30 to $54.70.

Nationally, the February all farm products index of prices received increased 4 points from January to 142 percent of its January-December 1977 average. Increases in the prices of cattle, hogs, wheat, and tomatoes were partially offset by lower prices for milk, eggs, cotton, and strawberries.

DEPARTMENT OF NATURAL RESOURCES AND CONSERVATION GRANT DEADLINE MAY 15

Extended drought periods and the need to upgrade aging systems have caused water users to look to DNRC for grant and low-interest loan funding. Water shortages are a chronic problem for irrigators and other users along the Musselshell River. Scheduled water delivery from Deadman's Basin Reservoir was initiated in 1990 to control the demand for and more accurately account for irrigation water. According to plan, measuring devices were required in 1991 before delivery of stored contract water began.

In 1991 the legislature approved grant funding to implement another aspect of the district's management strategy. Funds will be used to install instruments to measure tributary inflows and diversion flows, detect delivery system seepage loss and failure, and to collect reservoir content and release rate data.

The deadline for grant and loan applications for the Department of Natural Resources and Conservation's resource development program is May 15. DNRC administers two programs that provide funding for communities to develop the efficient use of natural resources in the state: the Water Development Program and the Renewable Resource Development Program. State and local government agencies and their subdivisions, including conservation and irrigation districts, are eligible to apply for these funds.

The Water Development Program funds projects that promote the development and efficient use of natural resources that are water related. Waste storage is a high priority under the Water Development Program but groundwater protection, water-based recreation development and irrigation system improvements are examples of projects that have been considered for funding in the past.

The Renewable Resource Development program supports projects to develop Montana's renewable natural resources. Water development projects are eligible under the Renewable Resource program, but other projects that preserve the state's natural resources are also eligible. For example, in 1991 the legislature approved a cereal-legume crop rotation experiment designed to demonstrate the benefits of this alternative agricultural practice.

A legislative committee actually selects and sets funding priorities. DNRC provides advice to the committee, according to Jeanne Doney, DNRC Program Manager. "The Department's role is to screen grant and loan requests to determine whether projects are financially and technically feasible," she explained. "The feasible grant requests are then ranked according to standard criteria to determine those that make the most efficient use of our state's natural resources."

More information and application materials can be obtained from Doney in care of the Department of Natural Resources and Conservation, 1520 East Sixth Avenue, Helena, MT 59620, phone 444-6839.

JANUARY U.S. RED MEAT PRODUCTION SETS RECORD HIGH

There were 1.5 million pounds of red meat produced by **Montana** slaughter plants during January, up 11 percent from last month and up 19 percent from January 1991.

The number of cattle slaughtered, at 1,700 head, rose 200 head from last year. Average live weight of cattle slaughtered was 1,120 pounds compared with 1,075 last year. A total of 2,700 hogs were slaughtered, 500 more than in January 1991. The average live weight of the hogs slaughtered was 236 pounds, 16 pounds heavier than last year. Sheep and lambs slaughter totaled 300 head, an increase of 100 head from last January. Average live weight of lamb and mutton animals slaughter decreased 10 pounds to an average of 127 pounds.

Commercial red meat production for the **United States** totaled 3.62 billion pounds. This production is 6 percent above a year earlier, 4 percent higher than the previous January record of 3.48 billion pounds set in 1986, and the second highest production of any month. The all-time high monthly red meat production was 3.72 billion pounds in October 1991. January 1992 and 1991 contained 23 weekdays (including two holidays) and four Saturdays.

Beef production totaled 2.04 billion pounds. This was up 4 percent from a year earlier. Head kill totaled 2.93 million, up 2 percent. The average live weight increased 29 pounds to 1,173. Veal production, at 28.0 million pounds, was down 8 percent from a year earlier. Calf slaughter totaled 131,100 head, down 14 percent. The average live weight increased 48 pounds to 366.

Pork production, at 1.52 billion pounds, was up 9 percent from a year earlier. Hog kill totaled 8.34 million head, up 9 percent from last year. The average live weight increased 4 pounds to 255. Lamb and mutton production, at 31.0 million pounds, was down 4 percent from last year. Slaughter totaled 483,800 head, down 5 percent. The average live weight was 128 pounds, the same as a year earlier.

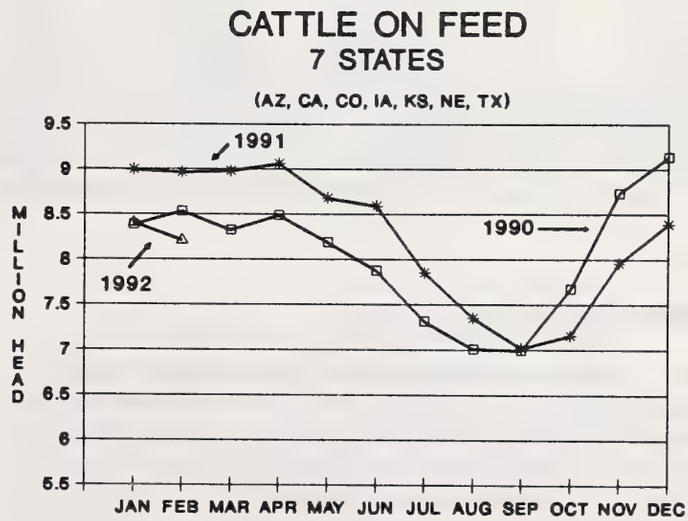
CATTLE ON FEED DOWN 8 PERCENT IN 7 MONTHLY STATES

Cattle and calves on feed for slaughter market on February 1, 1992, in the 7 states preparing monthly estimates totaled 8.20 million head, down 8 percent from a year ago and 4 percent below February 1,1990.

Placements of cattle and calves on feed in the 7 states during January totaled 1.57 million, down 9 percent from last year and 17 percent below 1990. This is the lowest January placements since 1985. Net placements of 1.47 million for January was down 9 percent from last year and 17 percent below 1990.

Marketings of fed cattle during January totaled 1.66 million, up 2 percent from last year and 3 percent above two years ago.

Other disappearance totaled 99,000 head compared to 118,000 in January 1991 and 114,000 in January 1990.



JANUARY WAGE RATES HIGHER

A total of 2.57 million people worked on the **Nation's** farms and ranches during the week of January 12-18, 1992. This compares with 2.61 million workers in January 1991. Self-employed farm operators accounted for 1.43 million of the total, along with 321,000 unpaid workers, and 703,000 workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 123,000 workers.

Farm operators in the **U.S.** paid their hired workers an average wage of $6.37 per hour during the January 1992 survey week. This rate was up 37 cents from a year earlier. Workers paid on an hourly basis earned $5.97 per hour compared with $5.62 last January. Field workers received an average of $5.99 per hour, up 30 cents from the January 1991 survey week. Livestock workers earned $5.62 per hour compared with $5.32 a year earlier.

Farm operators in the Mountain I region, which includes **Montana**, Idaho and Wyoming, paid their hired workers an average wage of $5.92 per hour during the January 1992 survey week. This rate was up 54 cents from a year earlier. Workers paid on an hourly basis earned $5.66 per hour compared with $5.26 last January. Field workers received an average of $6.16 per hour, up $1.13 from the January 1991 survey week. Livestock workers in the Mountain I region earned $5.61 compared with $5.02 per hour a year earlier.

Benefits, such as housing and meals, were provided to 44 percent of the Nation's hired workers during the survey week. This compares with 45 percent last year.

JANUARY MILK PRODUCTION

Milk production in the **21 major states** during January totaled 10.7 billion pounds, virtually unchanged from production in these same states in January 1991. December revised production, at 10.4 billion pounds, was slightly below December 1990.

Production per cow in the 21 major states averaged 1,283 for January, 32 pounds more than January 1991. The number of cows on farms in the 21 major states was 8.31 million head, 205 thousand head less than January 1991 and 17 thousand less than December 1991.

During the October-December period, the 21 major states produced 30.6 billion pounds of milk, 84.6 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly (which include **Montana**) followed the same pattern as the 21 states, the U.S. production would be 12.6 billion pounds for January 1992.

FEBRUARY 1 POTATO STOCKS

Montana producers had 2.5 million cwt of potatoes in storage as of February 1, 1992, compared with 2.0 million a year ago. The February 1 stocks represent 89 percent of 1991 production.

Western potato stocks totaled 129 million cwt in six states, up 8 percent from last year and 23 percent above two years ago. Idaho stocks were up 2 percent from last year and accounted for 53 percent of the western holdings. **Montana**, with mostly seed potatoes, is up 24 percent. Washington stocks were up 10 percent, Oregon was up one-third and Colorado was up 16 percent from a year ago. California stocks were off 3 percent.

Total **U.S.** potato stocks totaled 179 million cwt on February 1, 1992, up 10 percent from last year and 24 percent above two years ago. This is 49 percent of the fall potato production in the 15 storage states, compared with 47 percent a year ago. Potatoes by type are 3 percent reds, 17 percent whites, and 80 percent russets, with more whites and fewer russets than a year ago.

Disappearance from harvest through January for the U.S. totaled a record high 185 million cwt of potatoes, up 2 percent from last year and 8 percent above two years ago. Shrinkage and loss to date was 21.2 million cwt, 5 percent above the 20.1 million cwt last year and 17 percent above the 18.1 million cwt lost two years ago.

Processing in the 8 major states claimed 85.5 million cwt of potatoes from the 1991 crop so far, down 1 percent from last year but 6 percent above two years ago. January usage returned to the plus side with 14.9 million cwt processed compared with 14.4 million cwt a year ago and 14.0 million cwt two years ago.

JANUARY EGG PRODUCTION UP 1 PERCENT

U.S. egg production totaled 5.91 billion during January 1992, up 1 percent from the 5.86 billion produced a year ago. Production included 5.08 billion table eggs, up fractionally from last year, 770 million broiler-type hatching eggs, up 6 percent from last year, and 62.0 million egg-type hatching eggs, down 5 percent from last year. The total number of layers during January averaged 278 million, up 2 percent from the 274 million in January 1991. January 1992 egg production per 100 layers was 2,121 eggs, compared with 2,138 in January 1991.

All layers in the **U.S.** on February 1, 1992, totaled 277 million, up 1 percent from a year ago. The 277 million layers consisted of 233 million layers producing table or commercial type eggs, 41.8 million layers producing broiler-type hatching eggs, and 2.83 million layers producing egg-type hatching eggs. Rate of lay per day on February 1, 1992, averaged 67.8 eggs per 100 layers, down 1 percent from last year's 68.5 eggs per 100 layers.

MONTANA HONEY PRODUCTION UNCHANGED, U. S. UP 11 PERCENT

Montana's honey industry produced 7.912 million pounds in 1991, down slightly from the 7.938 million pounds produced a year earlier. There were 86,000 colonies producing honey in 1991, 12,000 fewer than in 1990. The average yield per colony was 92 pounds compared with 81 pounds last year.

The state's honey producers received an average price per pound of 54 cents this year the same as last year. The total value of the honey crop is 4.3 million dollars unchanged from 1990. Honey stocks held by producers on December 15, 1991 totaled 1.187 million pounds compared with 1.191 million pounds a year earlier. Honey stocks held by producers do not include stocks under government loan.

Honey production in 1991 from all U. S. producers with five or more colonies totaled 220 million pounds, up 11 percent from 1990. There were 3.20 million colonies producing honey in the nation, compared with 3.21 million in 1990. Yield per colony averaged 68.8 pounds, up 7.2 pounds from the 61.6 pounds in 1990. Colonies that produced in more than one state were counted in each state and yields may be understated. Producer honey stocks were 36.5 million pounds on December 15, 1991, up 17 percent from a year earlier.

Prices for the 1991 crop averaged 55.9 cents per pound, up 2.2 cents from the 1990 price of 53.7 cents per pound. Prices are based on retail sales by producers and sales to private processors and co-ops. At the U.S. level, prices for each color are derived by weighting state average prices by the state quantities sold. Prices increased for most types of honey in 1991 except for retail sales of water white, extra white, white, all other honey area specialties. Government payments are excluded from the honey prices published in this annual report.

HIGHLIGHTS:

Cattle and Calves Inventory
Sheep and Lambs Inventory
January Ag Prices Received
Cattle on Feed

A SPECIAL THANKS to all livestock producers responding to our January 1 cattle and sheep inventory survey. Field and telephone enumerators contacted nearly 1,800 Montana farmers and ranchers early in January. Names were selected on a statistical probability basis. Only by your voluntary cooperation can those involved in agriculture beserved with accurate, reliable statistics for a more efficient production and marketing system.

JANUARY 1 CATTLE AND CALF INVENTORY

Montana's January 1, 1992 cattle and calf inventory, at 2.55 million head, is up 9 percent from the revised 2.33 million head on hand a year earlier. The inventory included more beef cows compared with last January, 1.466 million head up 7 percent. Heifers 500 pounds or over kept for beef cow replacement was up 8 percent at 350,000 head.

Milk cow numbers remained unchanged at 24,000 head and milk cow replacement heifers also remained unchanged from last year, at 8,000 head. Other heifers weighing 500 pounds or more, at 202,000 head, were up 20 percent from 1991; steers weighing 500 pounds or more increased from last January to 220,000 head up 21 percent. There were 195,000 calves on hand weighing less than 500 pounds, up 15 percent from the 170,000 on hand January 1, 1991. The 1991 calf crop was 1.43 million head up 4 percent from 1990. The average value per head in the 1992 inventory was $720 compared with $755 a year earlier.

All cattle and calves in the United States as of January 1, 1992, totaled 100.1 million head, up 1 percent from the revised 98.9 million on January 1, 1991, and up 2 percent from 98.2 million two years ago. This is the largest January 1 inventory since January 1, 1987.

All cows and heifers that have calved, at 43.7 million, were up 1 percent from the 43.4 million level of both last year and two years ago.

Beef cows, at 33.8 million, were 2 percent above both January 1, 1991, and 1990. Milk cows, at 9.90 million, were 2 percent below both January 1, 1991, and 1990.

Other class estimates on January 1, 1992, and the changes from January 1 last year and two years ago, respectively, are as follows:

- All heifers 500 pounds and over, 18.6 million, up 2 percent and up 5 percent.
- Beef replacement heifers, 5.75 million, up 3 percent and up 6 percent.
- Milk replacement heifers, 4.20 million, down slightly and down 1 percent.
- Other heifers, 8.68 million, up 4 percent and up 8 percent.
- Steers weighing 500 pounds and over, 16.8 million, up 2 percent and up 5 percent.
- Bulls weighing 500 pounds and over, 2.28 million, up 2 percent and up 4 percent.
- Calves under 500 pounds, 18.7 million, virtually unchanged and down 2 percent.
- All cattle and calves on feed for slaughter, 11.9 million, down 5 percent and up 3 percent.

The 1991 calf crop was estimated at 39.3 million, virtually unchanged from 1990 and down 2 percent from 1989. The estimated calf crop is down 2 percent from the expected number published last July. Calves born during the first half of the year were estimated at 73.1 percent of the annual total.

JANUARY 1, 1992 SHEEP INVENTORY

The number of sheep and lambs on Montana farms and ranches totaled 688,000 head on January 1, 1992. This inventory is up 1 percent from last year and continues the upward trend that started in 1987. Ewes one year old and older were up 1 percent, at 510,000 head, while ewe lambs 3 months old and older were down 6 percent from the previous year. Sheep and lambs on feed at 38,000 were up 15 percent. The 1991 lamb crop was up 9 percent at 585,000 head. The average value of sheep and lambs on Montana farms and ranches January 1, 1992 was $7.00 below last year at $57.00 per head.

All sheep and lamb inventory in the United States on January 1, 1992, totaled 10.9 million head, down 3 percent from a year earlier. The value of sheep and lambs on hand totaled $666 million, 9 percent below a year earlier.

The average value per head was $61.40, down 6 percent from a year earlier. Stock sheep inventory decreased to 9.04 million head on January 1, 1992, down 5 percent from 9.47 million last year. Ewes one year old and older, at 7.18 million head, were down 3 percent. Ewe lamb inventory totaled 1.17 million head, down 13 percent from a year earlier.

Sheep and lambs on feed January 1, 1992, for the slaughter market in the 25 major feeding states totaled 1.81 million head, up 4 percent from a year earlier.

1991 lamb crop of 7.70 million head was down fractionally from the 1990 lamb crop. The 1991 lambing rate was 104 per 100 ewes one year old and older on hand January 1, 1991, compared with 101 in 1990.

JANUARY PRICES RECEIVED

The January 1992 index of prices received by Montana farmers and ranchers moved up 8 points from the previous month. The index for all commodities, at 171 percent of its January-December 1977 average, was most influenced by a 13 point increase in the all crops index. Livestock and livestock products added to the upward movement with a 4 point, month-to-month increase. Compared with last year the all crops index is up 33 points, while the livestock index is down 19 points.

Individual commodity prices were up for all crops except oats and hay. The January all wheat price averaged $3.57 per bushel, up 37 cents from December. Barley, at $2.63, was up 3 cents per bushel. Livestock price changes were mixed with steers and heifers, calves and hogs down from last month. Cows, sheep and lambs were up. Milk and wool were up, eggs were down.

The January all farm products index of prices received by U.S. farmers was unchanged from December, at 137 percent of its January-December 1977 base. Decreases in the prices of eggs, hogs, and milk were offset by increases in the prices of tomatoes, wheat, and corn. The index was 7 points below a year earlier.

The index of prices paid by farmers for commodities and services, interest, taxes, and farm wage rates for January was 188 percent of its 1977 average. The index was down 1 point from October 1991 but was unchanged from January 1991. Since last surveyed in October 1991, prices were significantly lower for fuels and feeder livestock.

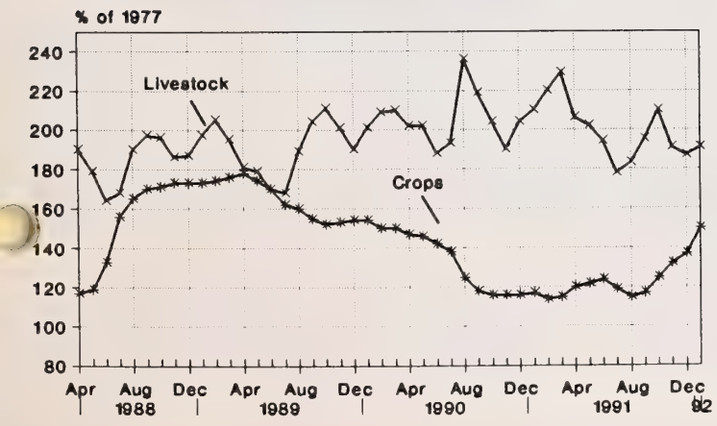
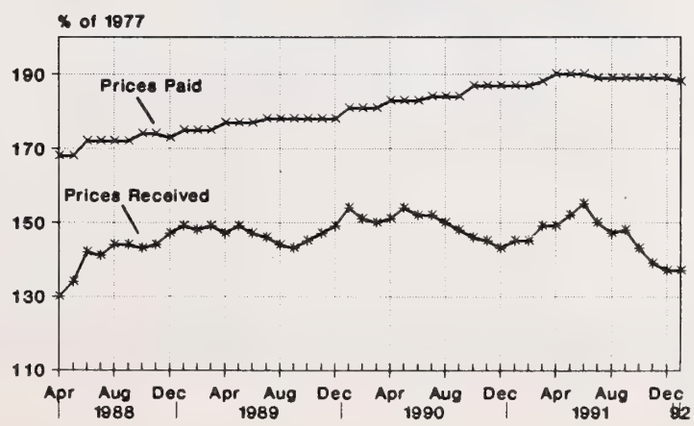
MONTANA CROP & LIVESTOCK PRICES RECEIVED INDEXES



UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



CATTLE ON FEED DOWN 6 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed January 1, 1992, for slaughter market in the 13 states preparing quarterly estimates totaled 10.1 million head, down 6 percent from a year ago but 2 percent above January 1, 1990. The inventory included 6.73 million steers and steer calves, 4 percent below a year ago. This group accounts for 66.4 percent of the total inventory. Heifers and heifer calves accounted for 3.35 million head, 11 percent below a year ago.

Placements of cattle and calves on feed in the 13 states during the October-December 1991 quarter totaled 7.09 million, down 4 percent from last year and 3 percent below October-December 1989. Net placements of 6.78 million for October-December were down 4 percent from last year and down 3 percent from 1989.

Marketings of fed cattle during the October-December 1991 quarter totaled 5.27 million, down fractionally from last year and 1 percent below two years ago.

Other disappearance totaled 306,000 head compared to 347,000 in October-December 1990 and 293,000 in October-December 1989.

Cattle feeders expect to market 5.44 million head during the January-March quarter of 1992. This would be up 2 percent from the first quarter marketings in 1991 but 1 percent below 1990.

1991 CROP PRODUCTION

Montana's small grain growing season got off to a late start and was wet and cool during the critical development months. Record yields were attained but acreage was reduced by government restrictions, hail damage, and winter wheat winter kill.

All wheat production in 1991, at 159.5 million bushels, rose 9 percent from a year ago and 24 percent above the five-year average.

Barley production in 1991 was up 52 percent from last year, at 85.8 million bushels. This is a 28 percent increase over the 5-year average.

JANUARY 1 POTATO STOCKS

Montana producers had 2.6 million cwt of potatoes in storage as of January 1, 1992, compared with 2.2 million a year ago. The January 1 stocks represent 92 percent of 1991 production.

Western states held 149 million cwt of potatoes in storage on January 1, 1992, a gain of 6 percent over last year and 20 percent more than two years earlier. Oregon stocks were 19 percent larger than a year ago while Idaho gained 3 percent and Washington was up 9 percent. Colorado potato stocks gained 11 percent and **Montana** had 17 percent more than last year. California stored 5 percent fewer potatoes compared to a year ago.

January 1, 1992 potato stocks totaled 211 million cwt in the 15 major states, up 8 percent from a year earlier and 22 percent above two years ago. Stocks by type are 3 percent red, 18 percent white, and 79 percent russet, with more white and less russet than a year ago. Disappearance to date for the season was up 2 percent, although processing is behind last year by 2 percent. Shrink and loss of 18.8 million cwt was 6 percent above last year and 15 percent above two years ago.

MONTANA CROP PRODUCTION VALUE UP 30 PERCENT

Montana's 1991 crop production, valued at 1,079.0 million dollars, is 30 percent more than last year. The increase is primarily caused by stronger wheat prices and large spring wheat and barley crops.

The season average wheat price used to value this years production, at $3.10 per bushel, was up 45 cents per bushel from 1990. Spring wheat production in 1991 was 51 percent above 1990, but this was partially offset by an 18 percent reduction in winter wheat. Barley production was 52 percent above last year, and the price advanced 30 cents to $2.60 per bushel.

Hay production was 15 percent above a year ago, but with a 12-dollar-per-ton drop in price value of production fell 6 percent.

Montana Crop Value of Production
1982–1991 (Million Dollars)

1/ Imports and exports include flour and other products expressed in wheat equivalent. 2/ Residual, approximates feed use and includes negligible quantities used for distilled spirits. 3/ Excludes an abnormally large volume of grain in transit. 4/ Preliminary. SOURCE: World Agricultural Supply and Demand Estimates--ERS. Totals may not add due to independent rounding.

OCTOBER-DECEMBER 1991 MILK PRODUCTION

Milk production in Montana during the October-December quarter totaled 83 million pounds, down 8 percent from the same quarter of last year. The average number of milk cows in the state during the quarter remained unchanged from last year at 24,000 head.

On January 1, 1992 the amount of grain and other concentrates fed to milk cows in the state averaged 17 pounds, 2 pounds more than the amount fed a year ago. The value of grain and other concentrates fed to milk cow averaged $7.20 per hundred-weight on January 1 of this year, $0.25 more than the January 1, 1991 price.

The quarterly production of milk for the U.S. was 36.1 billion pounds, down slightly from the October-December period last year. The average number of milk cows in the U.S. during the October-December quarter was 9.95 million head, 200,000 less than the same period last year.

Grain and other concentrates fed to milk cows on January 1, 1992 averaged 18.0 pounds, 0.4 pound more than on January 1, 1991. The value of grain and other concentrates fed to cows on January 1, 1992 averaged $7.69 per hundred-weight, $0.15 less than the price on January 1, 1991.

DECEMBER RED MEAT PRODUCTION

Montana slaughter plants produced 1.4 million pounds of red meat in December of 1991. This production is a decrease of 10 percent from last month, and is down 35 percent from December of 1990.

The number of cattle slaughtered in the state, at 1,500 head, is down 1,700 head from last year. Average live weight of cattle slaughtered was 1,114 pounds, up 54 pounds from the average live weight last year.

Hog slaughter in the state, at 2,500 head, was up 300 head from a year ago. Average live weight for hogs slaughtered increased 19 pounds to 243 pounds. There were 300 lamb and mutton animals slaughtered in the state in December, unchanged from levels of a year ago. Average live weight of lamb and mutton animals slaughtered decreased 10 pounds from last year to an average of 114 pounds.

Commercial red meat production for the United States totaled 3.28 billion pounds, 7 percent above a year earlier. Beef production totaled 1.78 billion pounds. This was up 6 percent from a year earlier. Head kill totaled 2.56 million, up 4 percent. The average live weight increased 27 pounds to 1,172. Veal production, at 27.0 million pounds, is unchanged from a year earlier. Calf slaughter totaled 133,700 head, down 4 percent. The average live weight increased 41 pounds to 348.

Pork production, at 1.44 billion pounds, was up 8 percent from a year earlier. Hog kill totaled 7.93 million head, up 8 percent from last year. The average live weight increased 2 pounds to 254. Lamb and mutton production, at 31.0 million pounds, was up 4 percent from last year. Slaughter totaled 488,600 head, up 5 percent. The average live weight decreased 1 pound to 125.

January-December red meat production was 39.4 billion pounds, up 2 percent from the comparable period a year earlier. Accumulated beef production was up 1 percent, while veal was down 6 percent, pork was up 4 percent, and lamb and mutton was unchanged.

1991 EGG PRODUCTION AND CHICKEN INVENTORY

There were 164 million eggs produced in **Montana** during the year ending November 30, 1991, down 4.7 percent from last year's production. Layer numbers during 1991 averaged 626,000 compared with 658,000 a year earlier. The annual average production per layer on hand was 261 eggs, the same as in 1990.

There were 780,000 total chickens on Montana farms on December 1, 1991, compared with 760,000 on hand last year. The inventory value was $2,184,000, up from $1,748,000 on December 1, 1990.

U.S. egg production during the year ending November 30, 1991, totaled 69.0 billion eggs, up 2 percent from last year's total of 67.9 billion eggs. Layer numbers during 1991 averaged 273 million layers, up 1 percent from 1990. The annual average production per layer on hand in 1991 was 252 eggs, up from the 1990 average of 251 eggs per layer.

The total number of chickens on hand in the U.S. on December 1, 1991, (excluding broilers) was 359 million head, 2 percent above last year. The total value was $826 million, up from $805 million on December 1, 1990.

Sheep Inventory

DECEMBER EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 6.01 billion during December 1991, up 2 percent from the 5.88 billion produced a year ago. Production included 5.18 billion table eggs, 762 million broiler-type hatching eggs, and 62 million egg-type hatching eggs. The total number of layers during December 1991 averaged 279 million, up 2 percent from the 272 million a year ago. December egg production per 100 layers was 2,153 eggs, compared with 2,156 in December 1990.

All layers in the U.S. on January 1, 1992 totaled 280 million, compared with 273 million a year ago. The 280 million layers consisted of 235 million layers producing table or commercial type eggs, 41.4 million layers producing broiler-type hatching eggs and 2.86 million layers producing egg-type hatching eggs. Rate of lay per day on January 1, 1992 averaged 69.0 eggs per 100 layers, down fractionally percent from last year's 69.3 eggs per 100 layers.

Data for the 30 quarterly states (which include **Montana**) were estimated based on the percent change in the 20 states conducting monthly surveys. These monthly states accounted for about 82 percent of the U.S. egg production during the 3-month period, September through November 1991.

HIGHLIGHTS:

Winter Wheat Seedings
Hay Stocks
Grain Stocks
December Prices Received
Hogs & Pigs Inventory

PLEASE RETURN

Crop acreage, grain stocks and hog and pig estimates included in this issue of the Reporter are the results of surveying over 2,000 Montana farmers and ranchers during December. Names were selected on a probability basis. A SPECIAL THANKS to those of you interviewed for this very important end of season survey. Only by your voluntary cooperation can those in agriculture be served with accurate, reliable statistics.

WINTER WHEAT SEEDED ACRES

Montana farmers seeded 2.35 million acres of winter wheat last fall for harvest in 1992. This is the same as 1991 winter wheat seeded acres, but 6 percent below the 10 year average. Soil moisture was generally adequate at seeding time. A cold period occured in November before snow cover arrived. However the condition of the dormant crop was rated as mostly good to excellent at the end of December.

Winter wheat seeded area for harvest in the U.S. in 1992 is placed at 50.2 million acres, down 2 percent from 1991. Seeding of the 1992 crop got its start in some states last August. By September 1, about 2 percent of the acreage was planted. As of December 1, 1991, completion reached 98 percent. Most remaining acreage to be seeded was in California, Texas, and the Southeast. Hard red winter wheat totals 35.3 million acres, down slightly from last year. Seeded acreage is off 1 percent from 1991 in major producing states in the Plains.

Early seeding conditions were favorable in Colorado. Abundant moisture prompted germination and emergence. Dry September and October weather sapped soil moisture. Low temperatures in November froze plant growth back in several areas. Kansas planting got off to a good start in September. Subsequent dry weather through October depleted the already short surface soil moisture supplies. Many farmers dusted in their wheat.

Early growth was slow with little or no secondary root development noted. Poor to very poor conditions through most of November were improved by moderate rains in early December. Seeding of the Texas crop finished nearly on schedule in early December. Most fields are emerging to good stands. December rainfall brought an increase of insect activity.

1991 HAY STOCKS AND ROW CROP PRODUCTION

Montana farmers and ranchers had 4.6 million tons of hay on hand December 1, 1991, 15 percent more than a year earlier. The higher stocks reflect the open grazing during the fall months and record-high hay production. Montana's total hay production for 1991 was 5.19 million tons, 15 percent larger than last year. Alfalfa hay production in 1991 was 3.75 million tons, up 11 percent from 1990's output and the largest crop on record. Production of all other hay was 1.44 million tons, up from 1.12 million tons last year.

Corn producers harvested 1.8 million bushels of corn for grain and 1,062,000 tons of silage in 1991, compared with 855,000 bushels of grain and 1,045,000 tons of silage last year. Montana sugar beet growers harvested 1,312,000 tons in 1991, 6 percent more than last year's production. Dry bean production, at 158,000 cwt, was substantially less than the 220,000 cwt produced in 1990.

Hay stocks on farms for the U.S. totaled 112 million tons on December 1, 1991. This is 6 percent more than the amount on hand a year earlier. Production of all hay was estimated at 153 million tons, 5 percent more than both last year and 1989. U.S. alfalfa hay production totaled 83.8 million tons in 1991, fractionally above 1990. All other hay production reached 69.7 million tons in 1991, 10 percent above a year earlier.

Nationally, 1991 corn for grain production was estimated at 7.47 billion bushels, 6 percent below the 1990 crop. The U.S. production was virtually the same as the November 1 forecast. Corn silage production was estimated at 80.5 million tons, 7 percent below 1990. Production of dry edible beans for the U.S. is estimated at 33.0 million cwt for 1991, up 2 percent from a year earlier. The 1991 crop is 1 percent above the previous record high production set in 1981.

DECEMBER 1 GRAIN STOCKS

Wheat stocks in all storage positions in Montana on December 1, 1991 totaled 139 million bushels, 8 percent more than a year ago. Stocks on farms were down 2 percent at 108 million. Elevator stocks were up 69 percent at 31 million. On farm storage held 47 million bushels of winter wheat, down 27 percent, and 61 million bushels of spring wheat, up 33 percent. Elevators stored 14 million bushels of winter wheat, up 50 percent, and 17 million bushels of spring wheat, up 89 percent. Durum in all storage positions totaled 9.7 million bushels, up 41 percent.

Barley in storage totaled 60 million bushels, up 50 percent from a year ago. On farm storage held 50 million bushels, up 47 percent and elevators held 10 million bushels, up 63 percent. Oats stocks totaled 5.0 million bushels, up 4 percent from a year ago.

Nationally, all wheat stocks in all positions December 1, 1991 totaled 1.44 billion bushels, down 24 percent from December 1, 1990. On-farm stocks are placed at 565 million bushels, down 26 percent from last December 1. Off-farm stocks are 877 million bushels, down 23 percent from last year. The indicated disappearance during the September-November quarter is 599 million bushels, up 19 percent from the comparable period in 1990.

DECEMBER AG PRICES RECEIVED

Montana farm prices for wheat at mid-December were much stronger than both month-ago and year-ago levels. December's all wheat price, at $3.51 a bushel, is up 46 cents from November and up 92 cents from a year ago. Barley prices also increased moderately in December to $2.46 a bushel, up 7 cents from November and up 24 cents from last year. Hay prices are up slightly from last month.

Most livestock prices received by Montana farmers and ranchers continued to weaken in December. The all beef cattle price, at $62.50 a cwt, was down $3.50 from November and down $6.40 from a year ago in December. Hog prices, at 33.40, slipped slightly from last month, but are down a sharp $11.50 from December 1990. Sheep and lamb prices both increased during December. Lambs, at $47.90 a cwt, are $2.20 above November and $4.70 above last year.

The Montana December index of prices received for all farm products, at 165 (1977=100), is up 2 points from November and up 3 points from last December. The all crops index, at 146, is up 14 points from last month and up 30 points from last year. The livestock and products index, at 183, is down 8 points from last month and down 21 points from last year.

For the nation, the all farm products index of prices received by farmers for December decreased 1 point from the previous month to 138 percent of its 1977 average. Compared with a year earlier, the index was down 5 points. The December all crops index was 121, down 2.4 percent from last month, but the same as a year ago.

The December livestock and products index was 154, the same as a month earlier, but 6.1 percent below December 1990.

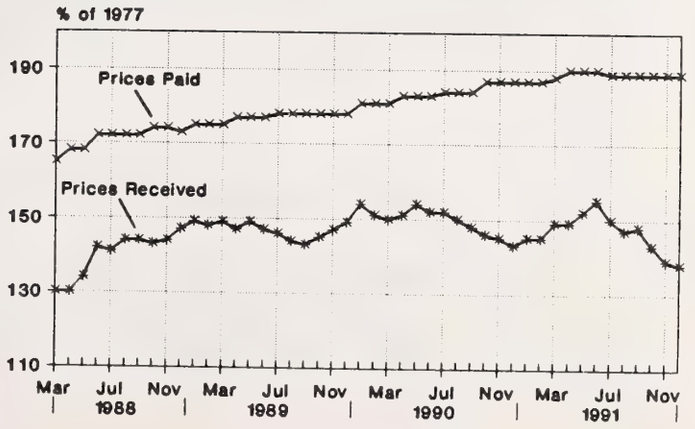
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



DECEMBER 1, 1991 HOG INVENTORY

Montana's hog inventory on December 1, 1991 totaled 225,000 head, up 22 percent from last year. Hogs on hand for breeding, at 26,000 head, were up 8 percent from last year, and market class hogs, at 199,000 head, were up 24 percent from December 1, 1990. The 1991 pig crop, at 420,000 head, was up 18 percent from a year ago.

U.S. inventory of all hogs and pigs on December 1,1991 is 57.0 million head. This is a 5 percent increase from last year and 6 percent above December 1, 1989.

Breeding inventory, at 7.22 million head, was up 5 percent from both the previous year and December 1, 1989.

Market hog inventory, at 49.8 million head, is 5 percent above December 1, 1990 and up 6 percent from two years ago.

The September-November 1991 U.S. pig crop was 23.2 million head, 5 percent more than 1990 and up 7 percent from the same period in 1989. Sows farrowing during this period totaled 2.94 million head, up 4 percent from last year and 5 percent above 1989. Pigs saved per litter averaged 7.89, a record high for the quarter, compared to 7.82 during the same period in 1990.

DECEMBER 1 CATTLE ON FEED IN 7 STATES DOWN 8 PERCENT FROM LAST YEAR

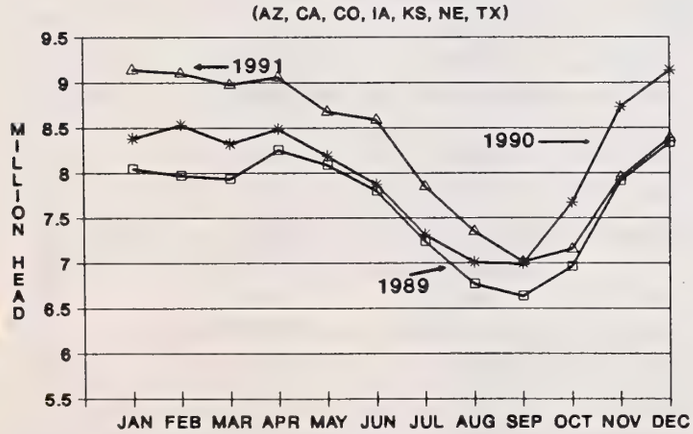
Cattle and calves on feed for slaughter market in the 7 states preparing monthly estimates totaled 8.38 million head, down 8 percent from a year ago but 1 percent above December 1, 1989.

Placements of cattle and calves on feed in the 7 states during November totaled 1.84 million, down 8 percent from both last year and 1989. Net placements of 1.76 million for November were down 8 percent from both last year and 1989.

Marketings of fed cattle during November totaled 1.33 million, down 12 percent from last year and 11 percent below two years ago. This is the lowest November marketings since 1981.

Other disappearance totaled 82,000 head compared to 95,000 in November 1990, and 91,000 in November 1989.

CATTLE ON FEED
7 STATES
(AZ, CA, CO, IA, KS, NE, TX)



NOVEMBER RED MEAT PRODUCTION

Montana slaughter plants produced 1.5 million pounds of red meat in November of 1991. This production is down 5 percent from last month, and down 61 percent from November of 1990.

The number of cattle slaughtered, at 1,700, was down 4,600 head from last year. Average live weight of cattle slaughtered was 1,125, up 49 pounds from last year. Hog slaughter, at 2,500, was up 300 head from last year. Average live weight for hogs was 242 pounds, up 23 pounds from last year.

Commercial red meat production for the United States totaled 3.32 billion pounds, 2 percent above a year earlier. Beef production totaled 1.81 billion pounds, down 2 percent from a year earlier. Head kill totaled 2.58 million, down 5 percent. The average live weight increased 35 pounds to 1,179.

Pork production, at 1.46 billion pounds, was up 6 percent from a year earlier. Hog kill totaled 7.94 million head, up 5 percent from last year. The average live weight increased 3 pounds to 256.

Lamb and mutton production, at 29.0 million pounds, was down 5 percent from last year. Slaughter totaled 467,400 head, down 3 percent. The average live weight decreased 2 pounds to 123.

January-November red meat production was 36.1 billion pounds, up 2 percent from the comparable period a year earlier. Accumulated beef production was up slightly while veal was down 7 percent; pork was up 4 percent; and lamb and mutton was down slightly.

POTATO PRODUCTION AND STOCKS

Producers harvested 9,300 acres of potatoes in Montana in 1991. Total production was 2,790,000 cwt. Last year 8,900 acres were harvested providing 2,492,000 cwt of potatoes. Montana producers have 2,650,000 cwt of potatoes in storage as of December 1, compared with 2,300,000 a year ago. The December 1 stocks represent 95 percent of production.

Nationally, production of fall potatoes for 1991 is estimated at 372 million cwt, up 6 percent from last year and 15 percent above 1989. Area harvested, at 1.18 million acres, is up 1 percent from 1990 and 8 percent above two years ago. Yield is 316 cwt per acre, up 14 cwt from a year earlier and 17 cwt above two years ago. Acreage, yield, and production this year are the highest recorded since the fall season records began in 1949.

Western states potato production is estimated at 257 million cwt in 1991, up 4 percent from last year and 15 percent above two years ago. Acreage harvested at 691,400 acres, is down slightly, but the average yield of 371 cwt per acre is up 17 cwt per acre. Idaho's production of 122 million cwt was up 3 percent from last year under good summer and fall growing conditions. Washington production was 11 percent above last year, Colorado production was up 5 percent, Nevada gained 9 percent and **Montana** was up 12 percent from a year ago. The Oregon crop was 5 percent smaller; while California, Utah and Wyoming each produced fewer potatoes than a year ago.

The 15 major potato states held a record 241 million cwt of potatoes on December 1, 1991, up 7 percent from last year and 19 percent above two years ago. Storage accounted for 66 percent of fall production this year, the same percent as last year. Stocks by type are 3 percent red, 19 percent white, and 78 percent russet, with more white and less russet than a year ago.

Western states held 168 million cwt of potatoes in storage on December 1, 1991, a gain of 4 percent over last year and 19 percent more than two years earlier. Most of the western stocks are held in Idaho, Oregon, and Washington. Oregon stocks were 15 percent larger than a year ago while Idaho was up 2 percent and Washington up 4 percent. Colorado potato stocks gained 10 percent and **Montana** 15 percent from last year. California stored 9 percent fewer potatoes than a year ago.

Disappearance from the start of harvest to December 1 was a record 123 million cwt of potatoes, up 4 percent from last year and 8 percent above two years ago. Cumulative shrink and loss to date was 16.2 million cwt, up 4 percent from the 15.6 million cwt lost from the corresponding period last year and 12 percent above the 14.5 million cwt lost from the 1989 crop. Processors continue to buy larger amounts of potatoes claiming 59.3 million cwt so far this season, a gain of 2 percent over a year ago and 9 percent above two years ago.

NOVEMBER MILK PRODUCTION

Milk production in the 21 major states during November totaled 9.91 billion pounds, 1 percent less than production in these same states in November 1990. October revised production, at 10.2 billion pounds, was slightly below October 1990.

Production per cow in the 21 major states averaged 1,185 for November, 14 pounds more than November 1990.

The number of cows on farms in the 21 major states was 8.36 million head, 180 thousand head less than November 1990 and 12 thousand less than October 1991.

During the July-September period, the 21 major states produced 30.7 billion pounds of milk, 84.6 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 states, the U.S. production would be 11.7 billion pounds for November 1991.

SEPTEMBER-NOVEMBER EGG PRODUCTION

Montana laying flocks produced 42 million eggs in the September-November 1991 quarter, 5 percent more than the same quarter last year. The number of layers for the quarter averaged 650,000 compared with 625,000 in 1990. The rate of lay in the 1991 quarter was 71.7 eggs per 100 layers compared with 70.6 a year ago.

The **nation's** laying flocks produced 17.3 billion eggs during the September through November quarter, up 2 percent from the corresponding quarter a year ago. Production included 14.9 billion for table eggs, 2.20 billion for broiler-type hatching eggs and 185 million egg-type hatching eggs. Layers for the quarter averaged 276 million, up 3 percent from the 267 million a year ago.

All layers in the U.S. on December 1, 1991, totaled 278 million, up 3 percent from the 272 million layers a year ago. The 278 million layers consisted of 235 million layers producing table or commercial type eggs, 40.4 million layers producing broiler-type hatching eggs, and 2.91 million layers producing egg-type hatching eggs. Rate of lay per day on December 1, 1991, averaged 69.9 eggs per 100 layers, compared with 69.8 eggs per 100 layers on December 1, 1990.

Laying flocks in the 20 major egg production states produced 4.77 billion eggs during November, up 1 percent from the 4.73 billion produced a year ago. The number of layers during November averaged 228 million, up 2 percent from a year ago.

FOREIGN OWNERSHIP OF U.S. FARMLAND FAIRLY CONSTANT THROUGH THE 1980s

Contrary to popular perceptions, foreigners are not buying up all of America's farmland, according to attorney Peter DeBraal of USDA's Economic Research Service. The amount of cropland, pasture, and rangeland owned exclusively by foreigners is about 3 to 4 million acres.

DeBraal analyzes reports submitted by foreigners to USDA under the Agricultural Foreign Investment Disclosure Act of 1978 and reports those findings each year to the President and Congress. The data gained from these disclosures have been used in reporting the effects of such holdings on family farms and rural communities.

Foreign interests owned 14.5 million acres, or slightly over 1 percent, of privately owned U.S. agricultural land (farm and forest land) on December 31, 1990. That's up 15 percent (1.88 million acres) from the previous year.

However, that rise is not too alarming, according to DeBraal, since foreign ownership has remained relatively steady from 1981 to 1990, at slightly above or below 1 percent of all the privately owned agricultural land in the United States.

And the totals reported may be overstating the extend of foreign ownership. DeBraal points out that about 62 percent of the reported foreign holdings (about 9 million acres) is land actually owned by U.S. firms. But the law requires them to register their landholdings as foreign if as little as 10 percent of their stock is held by foreign investors.

Only the remaining 38 percent of the foreign-held agricultural land (about 5.5 million acres) is owned almost exclusively by investors not affiliated with U.S. firms.

DeBraal found that corporations, both U.S. and foreign, own most (83 percent) of the foreign-held agricultural land in the United States. Partnerships own 9 percent and individuals own 6 percent. The remaining 2 percent is held by estates, trusts, associations, institutions, and others.

DeBraal stipulates that because of the corporate holdings, an increase in foreign ownership from one year to another does not necessarily represent land newly acquired by foreigners. "Nor do the numbers necessarily represent exclusive ownership by foreigners," he says. "A U.S. firm's landholdings can show up as 'foreign owned' one year, but not in another, as the firm's stock passes in and out of foreign hands. The land, however, is still owned by the same entity as before."

featuring...HILL COUNTY

Hill County is located along the Montana/Canadian border midway between the east and west borders of the state. The county is traversed by the Milk River which empties into the Fresno Reservoir at the Fresno Dam near the center of the county. At the tip of the Fresno Reservoir, the Milk River turns north, continuing through Hill County and on into Canada. A major portion of the Rocky Boy Indian Reservation is located in the southeastern corner of the county. A portion of the Bear Paw Mountains occupies the southeastern corner as well.

The main industry in the county is farming as Hill County is one of the major grain growing areas in the state. In the 1990 crop production figures, the county ranked 2nd in all wheat and winter wheat, and 1st in spring wheat production. Also, in 1990, Hill County came in 10th in durum wheat production, 11th in barley and 35th in oats.

Hill County is a major hog raising area as it came in 6th in the December 1, 1989, hog inventory. Some sheep and cattle are also raised in the area. The abundant grain crops grown in the county brought in $34,637,000 in cash receipts in 1989. Livestock receipts came to $10,392,000, with government payments adding $19,631,000 for a total cash receipts return of $64,660,000 in 1989.

Season's Greetings!

PLEASE RETURN

All of us at the Montana Agricultural Statistics Service would like to extend Season's Greetings to all of you. As we reflect back on 1991, we see a year when record or near record yields were achieved for many of our crops. As 1991 draws to a close, we see the prospect that our grain prices will also be good. We would like to thank each of you for your part in helping us by providing the basic information needed to publish agricultural statistics. May you have a prosperous and joyful new year!

SUMMARY OF 1990/91 WHEAT CROP:
RECORD PRODUCTION = REDUCED WORLD TRADE

The drop was not as steep as previously expected, mostly because of heavy late season exports to the Soviet Union. Despite a large 1990 wheat crop, the USSR's wheat imports are estimated at 15 million tons, 3 percent above 1989/90. While government procurements of the 1990 crop were up, they were well below needs. In addition, dryness in the spring wheat areas raised the prospect of a significantly lower 1991 wheat crop. Most of the USSR's imports were bought with credit or through barter arrangements. U.S. market share of the Soviet market fell sharply from 31 percent in 1989/90 to 15 percent in 1990/91.

China produced a record wheat crop in 1990/91 and reduced imports by 27 percent to an estimated 9.5 million tons, the least since 1986/87. Most of China's purchases in the last half of 1990/91, particularly from the United States, were for delivery in 1991/92.

North Africa imports reached 14.5 million tons, 4 percent above 1989/90. Egypt's imports fell, in part, in response to its large crop. Algeria and Morocco took advantage of low prices and increased imports to supplement reduced crops and to build stocks. Middle Eastern imports were disrupted by the Gulf war. Exports to Iraq virtually ceased after August 1990. Other countries in the region increased imports to build stocks and to meet the need of refugees and returning workers.

In Latin America, Brazil's crop was sharply curtailed by lack of access to adequate production credit and adverse weather. Imports doubled from 1989/90 to 3 million tons. Mexico also boosted imports in response to a weather related crop shortfall.

Consumption and imports of wheat for feed increased as wheat prices remained low relative to corn. South Korea more than doubled its imports of wheat. Nearly all the increase was used for feeding. Consumption of wheat for feed is estimated to have increased in several other countries, including the Soviet Union and the EC.

The United States faced sharp competition in 1990/91 because of record production in many countries and large competitor stocks. The EC is estimated to have exported 20 million tons and Canada's exports surged at the end of the year to reach 20.8 million tons, the highest since 1987/88, with exports to the Soviet Union accounting for much of the late season gain. Australia also boosted its exports to 11.7 million tons, up 9 percent from 1989/90. Argentina's exports fell 16 percent from 1989/90 to 4.7 million tons, as shipments to Brazil and other destinations were delayed and carried over into the 1991/92 marketing year. Smaller exporters, particularly non-EC western European countries and Turkey also made gains in 1990/91.

U.S. exports are estimated to have fallen 15 percent from 1989/90 to 28.5 million tons primarily as a result of reduced exports to the Soviet Union, China, and Iraq. Few sales were made as the funding cap for EEP approached. Sales slowed as budgetary pressures reduced subsidies in both the U.S. and the EC and P.L. 480 sales did not take place as quickly as expected. Importers waited for the new crop and lower harvest prices. When the EEP cap was lifted in April, U.S. sales resumed, but mostly for new crop wheat for delivery in 1991/92.

EEP sales in 1990/91 (July/June) reached 15.5 million tons, compared with 13 million tons in 1989/90. Average bonuses for 1990/91 were $38.13 per ton compared with $14.48 a year earlier. Bonuses began to rise sharply towards the end of the marketing year.

NOVEMBER AG PRICES RECEIVED

Montana farmers received higher prices for cereal grains in mid-November compared with October, but most livestock prices weakened.

The mid-November all farm products index of prices received increased 2 percent from the whole month of October. The index, at 172 percent of its 1977 base, was 11 percent higher than a year earlier, mostly due to higher grain prices.

The all crops index, at 140, was 12 percent higher than October, and 21 percent higher than a year ago. All cereal grains showed increases at mid-November compared with October. Alfalfa hay prices were unchanged from October but considerably below a year ago, reflecting this year's abundant supplies.

Individual commodity prices show all wheat, at $3.26, up 41 cents per bushel from October and 69 cents above November a year ago. Barley was $2.55 per bushel, up 4 cents from last month and 29 cents above the previous year. Oats, at $1.22 per bushel, were up 2 cents from October and 17 cents higher than November 1990. Alfalfa hay was $52.00 per ton, the same as October but $16.00 below last year.

The all livestock index, at 202, was down 4 percent from last month, but was 6 percent higher than a year ago. Compared with last month, lower prices were received at mid-November for all livestock except sheep, which, at $16.00 per cwt, were 40 cents higher than October.

Nationally, the November all farm products index of prices received decreased 2 points from October to 141 percent of its January-December 1977 average. Decreases in the prices of oranges, hogs, and cattle were partially offset by higher prices for lettuce, tomatoes, and strawberries.

featuring...GRANITE COUNTY

Granite County occupies approximately 1,106,681 acres of western Montana. Its terrain is largely mountainous, and is comprised of sections of the Deer Lodge National Forest. The Continental Divide crosses its southeastern boundary, while the Sapphire Mountains define the western edge of the county. A section of the Anaconda-Pintlar Wilderness area lies along the southeastern border. The Clark Fork River crosses the northern section of Granite County, while Rock Creek traverses the entire length of the county in the west. Georgetown Lake, a popular fishing spot, lies along the southeastern border.

Approximately 30 percent of Granite County's acreage is in farms and most cropland is irrigated. Hay was the major crop harvested in the county in 1990, but barley, oats, and wheat are also produced there.

Livestock interests are varied, with Granite County ranking 35th among the cattle producing counties in the January 1, 1990 inventory. The county came in 50th in the January 1, 1990 sheep count, and 53rd among the hog producing counties in the December 1, 1989 inventory.

Cash receipts from the sale of livestock brought in $11,766,000 in 1989. Crops receipts added $961,000, and government payments came to $254,000, for a cash receipt total of $12,981,000 in 1989.

OCTOBER RED MEAT PRODUCTION

Montana slaughter plants produced 1.6 million pounds of red meat in October of 1991. This production is up 12 percent from last month, but is down 49 percent from October a year ago.

The number of cattle slaughtered in the state, at 1,800 head, is down 3,200 head from last year. Average live weight of cattle slaughtered was 1,150 pounds, 134 pounds heavier than a year ago. Hog slaughter, at 2,600 head, was unchanged from last year. Average live weight for hogs was 235 pounds, up 12 pounds from a year ago.

Commercial red meat production for the United States totaled 3.71 billion pounds, 6 percent above a year earlier. Beef production totaled 2.12 billion pounds. This was up 3 percent from a year earlier. Head kill totaled 2.93 million, down 1 percent. The average live weight increased 46 pounds to 1,195.

Pork production, at 1.53 billion pounds, was up 10 percent from a year earlier. Hog kill totaled 8.50 million head, up 10 percent from last year. The average live weight increased 3 pounds to 252.

Lamb and mutton production, at 32.0 million pounds, was up 1 percent from last year. Slaughter totaled 522,600 head, up 3 percent. The average live weight decreased 3 pounds to 121.

January-September red meat production was 32.8 billion pounds, up 2 percent from the comparable period a year earlier. Accumulated beef production was up slightly, while veal was down 7 percent, pork was up 4 percent, and lamb and mutton was up slightly.

7 STATE CATTLE ON FEED DOWN 9 PERCENT FROM LAST YEAR

Cattle and calves on feed for slaughter market in the 7 states preparing monthly estimates totaled 7.94 million head, down 9 percent from a year ago but up slightly from November 1, 1989.

Placements of cattle and calves on feed in the 7 states during October totaled 2.48 million, down 10 percent from last year, and 7 percent below October 1989. **Net placements** of 2.40 million for October were down 10 percent from last year and down 7 percent from 1989.

Marketings of fed cattle during October totaled 1.62 million, up 1 percent from last year but 1 percent below two years ago.

Other disappearance totaled 77,000 head compared to 87,000 in October 1990 and 71,000 in October 1989.

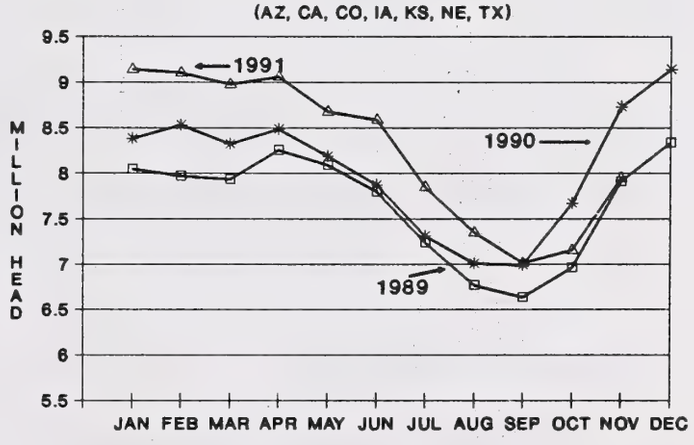
(AZ, CA, CO, IA, KS, NE, TX)



OCTOBER WAGE RATES INCREASE

A total of 3.29 million people worked on the nation's farms and ranches during the week of October 6-12, 1991. This compares with 3.32 million workers in October 1990. Self-employed farm operators accounted for 1.49 million of the total, along with 515 thousand unpaid workers, and 996 thousand workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 287 thousand workers.

Farm operators in the Mountain I region, which includes **Montana**, Idaho and Wyoming, paid their hired workers an average wage of $5.09 per hour during the October 1991 survey week. This rate was up 13 cents from a year earlier. Workers paid on an hourly basis earned $5.30 per hour compared with $5.15 last October. Field workers received an average of $5.11 per hour, up 5 cents from the October 1990 survey week. Livestock workers in the Mountain I region earned $4.77 compared with $4.47 per hour a year earlier.

In the **U.S.**, self-employed farm operators worked an average of 41.9 hours, 1.9 hours more than the comparable week in 1990. Unpaid workers averaged 38.0 hours, one-half hour above last year. Hired employees worked 42.2 hours compared to 41.3 hours in October of last year.

Benefits, such as housing and meals, were provided to 37 percent of the hired workers during the survey week. This compares with 42 percent last year.

OCTOBER MILK PRODUCTION

Milk production in the 21 major states during October totaled 10.2 billion pounds, slightly less than production in these same states in October 1990. September revised production at 9.93 billion pounds was slightly below September 1990.

Production per cow in the 21 major states averaged 1,219 for October, 19 pounds more than October 1990.

The number of cows on farms in the 21 major states was 8.37 million head, 149 thousand head less than October 1990 and 5 thousand less than September 1991.

During the July-September period, the 21 major states produced 30.7 billion pounds of milk, 84.6 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 states, the U.S. production would be 12.1 billion pounds for October 1991.

OCTOBER EGG PRODUCTION UP 2 PERCENT

The nation's laying flocks produced 5.87 billion eggs during October 1991, up 2 percent from the 5.79 billion eggs produced a year ago. Production included 5.06 billion table eggs, 751 million broiler-type hatching eggs and 63.0 million egg-type hatching eggs. The average number of layers during October was 276 million, up 2 percent from the 270 million head a year ago.

The October 1991 egg production averaged 2,131 eggs per 100 layers, compared with 2,145 eggs per 100 layers in October 1990.

All layers in the U.S. on November 1, 1991, totaled 277 million, compared with 270 million a year ago. The 277 million layers consisted of 234 million layers producing table or commercial type eggs, 40.0 million layers producing broiler-type hatching eggs, and 2.88 million layers producing egg-type hatching eggs. Rate of lay per day on November 1, 1991, averaged 69.1 eggs per 100 layers, down 1 percent from last year's 69.8 eggs per 100 layers.

Laying flocks in the 20 major egg production states produced 4.85 billion eggs during October 1991, up 1 percent from the 4.81 billion produced a year ago. The number of layers during October averaged 227 million, up 1 percent from the 224 million a year ago.

Data for the 30 quarterly states (which include **Montana**) were estimated based on the percent change in the 20 states conducting monthly surveys. These monthly states accounted for about 82 percent of the U.S. egg production and layer numbers during the 3-month period, June through August 1991.

CROP-TO-CROP SHIFTING WAS LOW

Based on program crop enrollment in 1991 (excluding wheat base enrolled under the winter wheat option), normal flex acres would comprise nearly 20 million acres. An additional 13 million could have been optionally flexed.

Of the 33 million acres that could have been flexed in 1991, according to the 1991 ASCS enrollment report, only about 7.5 million acres moved out of the original program crops--called gross flexed acreage. This probably indicates that a high proportion of normal flex acres is planted to the original program crop and that the optional flex acres provision was little used. The net flex acres, after land shifted among program crops is subtracted, amount to a little more than 5.7 million.

The relatively low shifts among crops through the acreage flex provisions suggest that producers' preferred crop rotations have not been constrained by past base acreage provisions. In the case of wheat, many producers likely are already producing their best alternative.

CROPLAND USE CONTINUES BELOW 5-YEAR AVERAGE

A total of 338 million acres of cropland was used for crops in 1991, 3 million less than last year and below the average of the last 5 years. Land used for crops includes acres harvested, failed, and summer fallowed. Cropland use in 1992 is likely to be higher, due to reduced set-aside requirements for wheat and feed grains.

U.S. cropland peaked at 387 million acres in 1981, after increasing to meet expanding export markets in the 1970's. Most of the reduction in cropland use during the 1980's reflects land idled under annual and long-term (Conservation Reserve Program) acreage reduction programs.

No land was idled under farm programs in 1981 and only a small amount in 1982. But in 1991, producers idled over 63 million acres in annual programs and the Conservation Reserve Program (CRP) --about 13 percent of U.S. cropland, equivalent to about a third of total arable land in the European Community.

Total cropland--idled land plus land used for crops--amounted to nearly 402 million acres in 1991. This is 1 percent below the 414-million-acre average of 1986-90, but 10 percent above the low of 364 million acres in 1974.

END-OF-YEAR SURVEYS UNDERWAY

The Montana Agricultural Statistics Service began contacting farmers and ranchers across the state in early November for final 1991 acreage, yield, and production totals and end-of-year livestock and poultry inventories.

Insects and variable weather conditions this year have again had an impact on Montana agriculture, and these surveys will help our office summarize where the industry stands at the end of 1991.

Information from these confidential surveys conducted by mail, telephone, or in person will also help producers make their plans for the coming year. Sound production and marketing decisions require good, reliable information and advanced planning. These reports provide producers with solid facts and figures they can incorporate into their plans.

If you are contacted, it is important to provide the requested information, since one producer represents similar operations of the same type and size. Our estimates can be no better than the numbers producers provide.

featuring...GRANITE COUNTY

Granite County occupies approximately 1,106,681 acres of western Montana. Its terrain is largely mountainous, and is comprised of sections of the Deer Lodge National Forest. The Continental Divide crosses its southeastern boundary, while the Sapphire Mountains define the western edge of the county. A section of the Anaconda-Pintlar Wilderness area lies along the southeastern border. The Clark Fork River crosses the northern section of Granite County, while Rock Creek traverses the entire length of the county in the west. Georgetown Lake, a popular fishing spot, lies along the southeastern border.

Approximately 30 percent of Granite County's acreage is in farms and most cropland is irrigated. Hay was the major crop harvested in the county in 1990, but barley, oats, and wheat are also produced there.

Livestock interests are varied, with Granite County ranking 35th among the cattle producing counties in the January 1, 1990 inventory. The county came in 50th in the January 1, 1990 sheep count, and 53rd among the hog producing counties in the December 1, 1989 inventory.

Cash receipts from the sale of livestock brought in $11,766,000 in 1989. Crops receipts added $961,000, and government payments came to $254,000, for a cash receipt total of $12,981,000 in 1989.

SEPTEMBER RED MEAT PRODUCTION

Montana slaughter plants produced 1.4 million pounds of red meat in September of 1991. This production is down 19 percent from last month, but is up 15 percent from September of 1990.

The number of cattle slaughtered, at 1,500 head, was up 100 head from last year. Average live weight of cattle slaughtered was 1,141, up 80 pounds from last year. Hog slaughter, at 2,400 head, was up 400 head from last year. Average live weight for hogs was 240 pounds, up 17 pounds from last year.

Commercial red meat production for the **United States** totaled 3.31 billion pounds, 7 percent above a year earlier. Beef production totaled 1.94 billion pounds. This was up 7 percent from a year earlier. Head kill totaled 2.70 million, up 3 percent. The average live weight increased 34 pounds to 1,182.

Pork production, at 1.32 billion pounds, was up 7 percent from a year earlier. Hog kill totaled 7.36 million head, up 7 percent from last year. The average live weight increased 4 pounds to 251.

Lamb and mutton production, at 29.0 million pounds, was up 6 percent from last year. Slaughter totaled 477,400 head, up 9 percent. The average live weight decreased 3 pounds to 119.

January-September red meat production was 29.1 billion pounds, up 1 percent from the comparable period a year earlier. Accumulated beef production was up slightly while veal was down 6 percent, pork was up 3 percent, and lamb and mutton was unchanged.

CATTLE ON FEED DOWN 6 PERCENT IN 13 QUARTERLY STATES

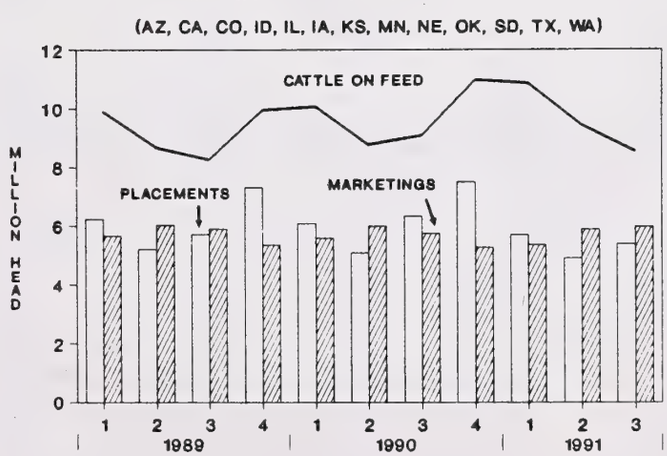
Cattle and calves on feed for slaughter market in the 13 states preparing quarterly estimates totaled 8.54 million head, down 6 percent from a year ago but 3 percent above October 1, 1989. The inventory included 5.66 million steers and steer calves, 4 percent below a year ago. This group accounts for 66.3 percent of the total inventory. Heifers and heifer calves accounted for 2.84 million head, 10 percent below a year ago. By weight group, 1.46 million head of the total inventory weighed over 1,100 pounds.

Placements of cattle and calves on feed in the 13 states during the July-September 1991 quarter totaled 5.36 million, down 15 percent from last year and 6 percent below September 1989. Net placements of 5.08 million for July-September was down 16 percent from last year and 7 percent from 1989.

Marketings of fed cattle during the July-September quarter totaled 5.97 million, up 4 percent from last year and 1 percent above two years ago. Other disappearance totaled 282,000 head compared to 261,000 in September 1990, and 227,000 in September 1989.

Cattle feeders expect to market 5.16 million head during the October-December quarter of 1991. This would be down 2 percent from the fourth quarter marketings in 1990 and 4 percent below 1989.

CATTLE ON FEED, PLACEMENTS, MARKETING BY QUARTERS FOR 13 STATES



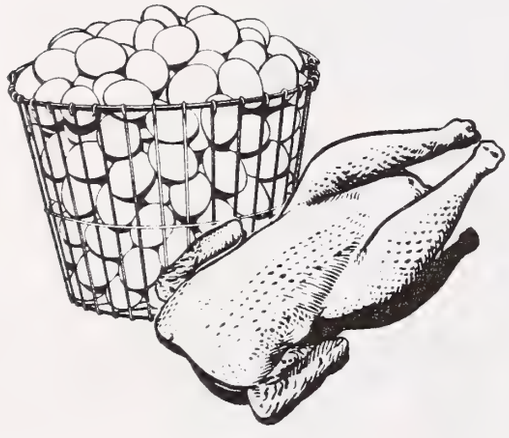
JULY-SEPTEMBER MILK PRODUCTION

Milk production in Montana during the July-September quarter totaled 87 million pounds, up 1 percent from the same quarter last year. The average number of milk cows in the state during the quarter remained unchanged from last year, at 24,000 head.

On October 1, 1991, the amount of grain and other concentrates fed to milk cows in the state averaged 16.0 pounds, 1 pound more than was fed a year ago. The value of grain and other concentrates fed to milk cows averaged $7.00 per hundredweight on October 1 of this year, $0.05 more than the October 1, 1990 price.

The quarterly production of milk for the U.S. was 36.3 billion pounds, down 1 percent from the July-September period last year. The average number of milk cows in the U.S. during the July-September quarter was 9.97 million head, 149 thousand less than the same period last year.

Grain and other concentrates fed to milk cows in the U.S. on October 1, 1991, averaged 17.3 pounds, 0.2 of a pound more than on October 1, 1990. The value of grain and other concentrates fed to cows on October 1, averaged $7.80 per hundredweight, $0.24 less than the October 1, 1990, price.



U.S. SEPTEMBER EGG PRODUCTION UP 2 PERCENT

United States egg production totaled 5.63 billion during September 1991, up 2 percent from the 5.53 billion produced a year ago. Production included 4.85 billion for table eggs, 720 million for broiler-type hatching eggs, and 63 million for egg-type hatching eggs. The total number of layers during September averaged 273 million, up 2 percent from the 268 million a year ago. Average egg production in September was 2,060 eggs per 100 layers, compared with 2,065 in September 1990.

All layers in the U.S. on October 1, 1991 totaled 274 million, compared with 269 million a year ago. The 274 million layers consisted of 232 million for table or commercial type eggs, 39.9 million for broiler-type hatching eggs, and 2.80 million for egg-type hatching eggs. Rate of lay per day on October 1, 1991, averaged 68.3 eggs per 100 layers, down 1 percent from the 68.7 eggs per 100 layers on October 1, 1990.

Laying flocks in the 20 major egg production states produced 4.66 billion eggs during September 1991, up 1 percent from the 4.60 billion eggs produced a year ago. The number of layers during September averaged 225 million, up 1 percent from the 222 million a year ago.

Data for the 30 quarterly states (which include Montana) were estimated based on the percent change in the 20 states conducting monthly surveys. These monthly states accounted for about 82 percent of the U.S. egg production and layer numbers during the three month period, June 1991 through August 1991.

NEWS FROM FISH, WILDLIFE AND PARKS:

The Montana Department of Fish, Wildlife and Parks now offers landowners and Conservation Districts around the state the opportunity to increase upland game bird populations through habitat improvement.

The Upland Game Bird Habitat Enhancement Program is funded through earmarked revenues derived from the sale of bird hunting licenses in Montana. To date, nearly $1 million dollars has been spent in Montana to enhance wildlife habitat through this program. As of November 1, approximately 230 individual ranches and farms were enrolled in the program. This has resulted in the establishment or renovation of nearly 4,000 acres of shelterbelt plantings, 8,000 acres of winter food plots and cover, 40,000 acres of nesting cover, and 51,000 acres of rangeland improvements to enhance upland bird cover.

In addition, 11 agreements have been developed with 10 different conservation districts. These conservation district agreements have provided funds for establishing and maintaining shelterbelt plantings. All landowners enrolled in the program are required to allow public access to project lands for public recreation, but are permitted to limit use to a reasonable level. The Department does not distribute a list of landowners cooperating in the program to the public.

Anyone interested in learning more about this exciting new wildlife habitat initiative is encouraged to contact their nearest Montana Fish, Wildlife and Parks office.

MOISTURE SITUATION FOR MONTANA

The crop-weather report for the week ending October 27, 1991, showed that Montana producers basically completed harvesting their fall crops. Harvest season ended just in time as the first heavy snow of the year hit most parts of the state. The snow will greatly reduce the seasonal fire problem.

Moisture from the snow should help alleviate the dry conditions that have existed the past several weeks. Topsoil moisture conditions were rated as 56 percent short, 39 percent adequate and 5 percent surplus. Topsoil moisture decreased another 10 points this week. Subsoil moisture was 54 percent short, 44 percent adequate and 2 percent surplus.

Montana winter wheat growers nearly completed seeding next year's crop. Emergence of the crop was justly slightly behind normal. The growth and condition ratings for winter wheat were 63 percent good to excellent, down just 2 points from last week. Wind damage to date has been mostly light.

As the snows and colder weather began, Montana livestock producers had moved 73 percent of their cattle and calves to winter pastures. Sheep producers had moved 77 percent of their flocks. Good pasture and range feed conditions had allowed livestock producers to keep their animals on summer pastures longer than normal.

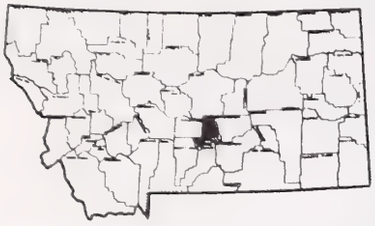
featuring... **GOLDEN VALLEY COUNTY**



Golden Valley County occupies approximately 749,881 acres of land in central Montana. Except for the extreme northwest corner that is taken by a section of the Lewis & Clark National Forest and the Big Snowy Mountains, the land is characterized by rolling prairie. The Musselshell River runs the entire width of the county in the south. Ryegate is the county seat, and the average annual precipitation for the area is 12.49 inches.

The county supports a variety of agricultural interests, including the production of winter, spring, and durum wheat, barley, oats, hay, and corn. Winter wheat production ranked the best at 20th. The cropland is largely non-irrigated.

Sheep, cattle, and hogs are all raised in Golden Valley County. Hog numbers brought the county a rank of 29th in the December 1, 1989, hog inventory. Golden Valley came in 43rd and 18th for cattle and sheep inventories, respectively, on January 1, 1990.

Cash receipts from crops amounted to $2,775,000. Livestock and products contributed $9,671,000, while government payments added $2,934,000, for a cash receipt total of $15,380,000 for Golden Valley County in 1989.

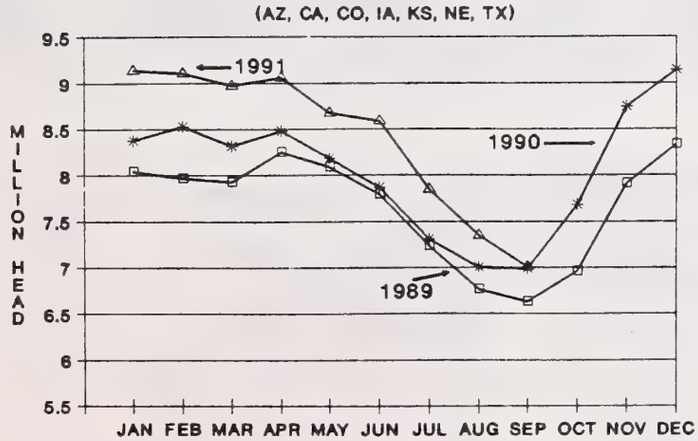
CATTLE ON FEED IN 7 STATES UP SLIGHTLY FROM LAST YEAR

Cattle and calves on feed September 1, 1991, for slaughter market totaled 7.01 million head, up slightly from a year ago and 6 percent above September 1, 1989. This is the largest September number on feed since 1987. MARKETINGS of fed cattle during August totaled 1.71 million, up 3 percent from last year, and 1 percent above two years ago.

PLACEMENTS of cattle and calves on feed in the 7 States during August totaled 1.44 million head, down 17 percent from last year, and 12 percent below August 1989. This is the lowest number placed during August since 1981. NET PLACEMENTS of 1.37 million for August were also down 17 percent from last year and 12 percent from 1989.

OTHER DISAPPEARANCE totaled 67,000 head compared to 82,000 in August 1990 and 76,000 in August 1989.

CATTLE ON FEED
7 STATES
(AZ, CA, CO, IA, KS, NE, TX)



AUGUST RED MEAT PRODUCTION

Montana slaughter plants produced 1.7 million pounds of red meat in August of 1991. This production is up 18 percent from last month, but is unchanged from August of 1990. The number of cattle slaughtered, at 1,900 head, was down 100 head from last year. Average live weight of cattle slaughtered was 1,162 pounds, an increase of 86 pounds from last year. .

Commercial red meat production for the **United States** totaled 3.43 billion pounds, down fractionally from a year earlier. Beef production totaled 2.08 billion pounds. This was up 1 percent from a year earlier. Head kill totaled 2.91 million, down 3 percent. The average live weight increased 32 pounds to 1,176. Pork production, at 1.30 billion pounds, was down 1 percent from a year earlier. Hog kill totaled 7.28 million head, down slightly from last year. The average live weight increased 2 pounds to 250.

JUNE THROUGH AUGUST EGG PRODUCTION

Montana's laying flocks produced 43 million eggs in the June through August 1991 quarter, the same as last year. The number of layers for the quarter averaged 660,000 compared with 670,000 in 1990. The rate of lay this quarter was 71.2 eggs per 100 layers compared with 69.1 eggs per 100 layers a year ago.

The **Nation's** laying flocks produced 17.2 billion eggs during the June through August quarter, up 2 percent from the corresponding quarter a year ago. Production included 14.8 billion for table eggs, 2.24 billion for broiler-type hatching eggs, and 196 million egg-type hatching eggs. Layers for the quarter averaged 271 million, up 2 percent from the 267 million a year ago.

All layers in the **U.S.** on September 1, 1991 totaled 272 million, up 2 percent from a year ago. The 272 million layers consisted of 229 million layers producing table or commercial type eggs, 40.3 million layers producing broiler-type hatching type eggs, and 2.84 million layers producing egg-type hatching eggs. Rate of lay per day on September 1, 1991, averaged 69.4 eggs per 100 layers, compared with 68.9 eggs per 100 layers on September 1, 1990. Laying flocks in the 20 major egg production states produced 4.80 billion eggs during August, 1 percent above a year ago. The number of layers during August averaged 223 million, up 1 percent from a year ago.

SEPTEMBER 1 GRAIN STOCKS

Montana's wheat stocks on September 1, totaled 184 million bushels, 9 percent more than a year ago, and the highest wheat stocks volume since 1987. Wheat stored on farms totaled 150 million bushels, up 3 percent from last year, while off-farm storage held 34 million, up 39 percent.

Winter wheat stocks at 88 million bushels were down 9 percent from September 1990, while hard spring stocks, at 96 million bushels, were up 32 percent. The sharp increase in spring wheat stocks reflects the size of this year's crop, a result of near ideal growing conditions. Durum stocks, at 11 million, are up 24 percent.

Barley stored in all positions on September 1, at 72 million bushels, was 26 percent above a year ago. On farm storage held 65 million bushels, up 30 percent, while off-farm stocks, at 7 million, were unchanged. Oats stocks, at 5.2 million bushels, were 9 percent less than last year. On-farm storage totaled 5 million bushels.

For the **Nation**, all wheat stored in all positions on September 1, 1991, is estimated at 2.04 billion bushels, down 15 percent from September 1, 1990. Stocks on farms are 828 million bushels, down 17 percent from last September 1. Off-farm stocks total 1.21 billion bushels, down 14 percent from last year.

Durum wheat stocks in all positions on September 1, 1991, are 129 million bushels, off 2 percent from last year. Farm stocks are placed at 95.2 million bushels, down 5 percent from September 1, 1990. Off-farm storage is 33.5 million bushels, up 7 percent from a year ago.

Barley stored in all positions on September 1, 1991, is estimated at 441 million bushels, 7 percent above the stocks of September 1, 1990. Of the total barley stocks on hand, 273 million bushel are stored on farms, 5 percent above a year earlier. Off-farm stocks, at 169 million bushels, are 11 percent above last year.

SEPTEMBER 1 GRAIN STOCKS

AUGUST MILK PRODUCTION

Milk production in the 21 major milk producing states during August totaled 10.3 billion pounds, 2 percent less than production in these same states in August 1990. The revised production estimate for July, at 10.5 billion pounds, decreased 2 percent from the previous year.

Production per milkcow in the 21 major states averaged 1,230 pounds for August, 3 pounds less than August of 1990.

The number of cows on farms in the 21 major states was 8.38 million head, an increase of 11 thousand head from July of 1991, but 120 thousand less than August of a year ago.

During the April-June period, the 21 major states produced 32.7 billion pounds of milk, 84.7 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 major milk producing states, the U.S. production would be 12.2 billion pounds for August 1991.

U.S. 1990 POTATO PRODUCTION UP 9 PERCENT, SALES SET A RECORD HIGH

Production of potatoes across the **U.S.** in 1990 totaled 402 million cwt, up 9 percent from the previous year and 13 percent above 1988. Harvested area was 1.37 million acres in the 4 growing seasons, topping 1989 by 7 percent and 1988 by 9 percent. The average yield was 293 cwt per acre, up 1 percent from 1989 and 4 percent above 1988.

Value of production totaled $2.43 billion, 11 percent short of the 1989 record high return but 13 percent above 1988. The average price of potatoes brought the grower $6.08 per cwt, down 17 percent from 1989 but 1 percent above 1988.

Sales from the 1990 **U.S.** potato crop were a record high, totaling 368 million cwt. This volume is 8 percent above 1989 and 13 percent above 1988.

Growers kept back 5.04 million cwt of potatoes for seed on their own farms and bought an additional 22.9 million cwt to plant the 1991 crop. Livestock on potato farms were fed 906,000 cwt, while shrinkage and loss claimed 28.3 million cwt of production. Shrinkage and loss were up 13 percent from the previous two years.

Processing used a record 224 million cwt of 1990 crop potatoes, up 11 percent from 1989 and 16 percent above 1988. Table stock, at 118 million was up 4 percent, while seed sales were up 3 percent.

Montana's potato production for 1990 was 2.5 million cwt of which 2.2 million were sold for a season average price of $8.60 per cwt. The 1990 price compares with $8.25 received last year. Most of Montana's potatoes are sold for certified seed.

September 1 Crop Production
Pasture & Range Feed Condition
August Prices Received
Montana Wheat & Barley Movement

SEPTEMBER 1 CROP PRODUCTION

Montana's 1991 all wheat crop was forecast on September 1 to be 165.6 million bushels, 3 percent more than the August 1 forecast, and the highest production since 1982, according to the Montana Agricultural Statistics Service. Record high yields are expected for durum, hard spring wheat and barley, while winter wheat ties the previous record.

Winter wheat production is forecast to be 72.2 million bushels, spring wheat 87.5 million, and durum 5.9 million. Total wheat production is 8 percent under the record set in 1982, but 14 percent more than last year. This year's acres for harvest are down 12 percent from a year ago, and 15 percent under 1982. Durum yield per acre is forecast to be 33 bushels, hard spring wheat 35 bushels, and winter wheat 38 bushels.

The State's barley production is expected to be 88.4 million bushels, 56 percent more than 1990, but 6 per cent less than the record set in 1987. The September 1 forecast is 4 percent above August 1. Barley yield is predicted to be 52 bushels.

Other crop estimates for Montana are: Oats, 6.1 million bushels, more than twice last year; all hay 5.24 million tons, up 17 percent; and sugar beets 1.227 million tons, down 1 percent.

For the nation, All wheat production is forecast at 2.01 billion bushels, down 1 percent from last month and down 27 percent from 1990. Area for grain is 58.1 million acres, off 16 percent from last year. Durum wheat production for 1991 is forecast at 114 million bushels, virtually unchanged from August 1 but down 6 percent from 1990. Other spring wheat production is forecast at 526 million bushels, down 4 percent from August 1 and down 10 percent from 1990.

Barley total production is forecast at 468 million bushels, down slightly from last month but 12 percent above the 1990 crop. Corn for grain production is forecast at 7.30 billion bushels, down 2 percent from last month and 8 percent below the 1990 crop.

SEPTEMBER 1 PASTURE & RANGE FEED CONDITION

Montana's pasture and range feed condition on September 1, was 84 percent of normal, a good to excellent rating. Pastures and ranges are mature and dry. However, ample rains through June caused lush growth which is still providing excellent grazing.

AUGUST PRICES RECEIVED

The mid-August 1991 all farm products index of prices received by Montana farmers and ranchers increased 2 percent from the whole month of July. The index, at 153 percent of its 1977 base, was 17 percent lower than a year ago.

The all crops index, at 119, was unchanged from July, and 4.8 percent lower than August of 1990. Winter wheat and oat prices increased slightly from last month, while barley, hay, spring and durum wheat prices declined.

Individual commodity prices show all wheat at $2.65, unchanged from the July price, and 14 cents lower than a year ago. Barley prices, at $2.41 per bushel, decreased 14 cents from July, and decreased 3 cents from August of 1990. Oats, at $1.34 per bushel, were up 6 cents from July, and 29 cents above August, 1990.

The all livestock index, at 183, was up 3 percent from July, but was down 22 percent from a year ago. Mid-August prices for cattle, sheep, and milk increased from last month, while hog, lamb, and calf prices decreased.

The August U.S. all farm products index of prices received decreased 3 percent from July to 146 percent of its January-December 1977 average. Decreases in the prices of cattle, hogs, and potatoes were partially offset by higher prices for oranges, wheat, and milk. The index was 3 percent below a year ago.

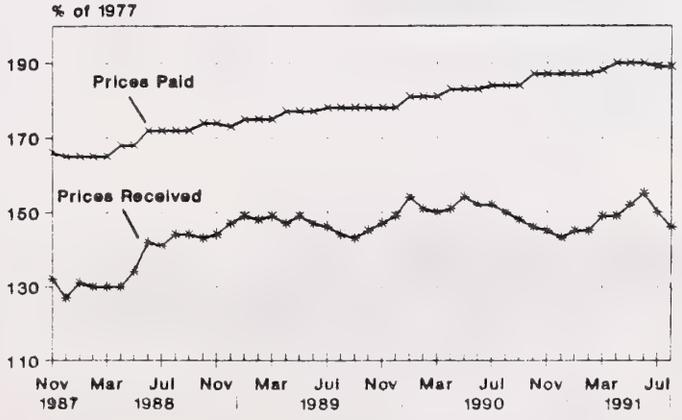
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



WHEAT and BARLEY MOVEMENT

Montana **wheat** shipped to out-of-state destinations in December 1990-May 1991, at 48.4 million bushels, was 12 percent below the same period last year. Shipments to eastern destinations totaled 0.7 million bushels, 27 percent lower than last year. Movement to the west was down 13 percent, at 46.5 million bushels. Other destinations, mostly south and southeast of Montana, received 1.2 million bushels--2.4 times more than last year.

Rail movement amounted to 43.9 million bushels--91 percent of total shipments compared with 90 percent in the 1989-90 period.

Montana **barley** shipped to out-of-state destinations, December 1990-May 1991, was 12.1 million bushels, down 40 percent from the same period last year. Shipments to western destinations were down 31 percent and eastern destinations were down 76 percent. Barley hauled by rail was 91 percent of total movement, the same as the 1989-90 period.

JULY RED MEAT PRODUCTION

Montana slaughter plants produced 1.5 million pounds of red meat in July 1991. This production is up 3 percent from last month, and up 13 percent from July of 1990.

The number of cattle slaughtered, at 1,600 head, was up 100 head from last year. Average live weight of cattle slaughtered was 1,196 pounds, up 102 pounds from last year. Hog slaughter, at 2,700 head, was up 600 head from last year. Average liveweight was 241, up 13 pounds from a year ago.

Commercial red meat production for the **United States** totaled 3.25 billion pounds, 5 percent above a year earlier. Beef production totaled 2.00 billion pounds. This was up 3 percent from a year earlier. The head kill totaled 2.84 million, down 1 percent. The average liveweight increased 35 pounds to 1,160.

Pork production, at 1.21 billion pounds, was up 9 percent from a year earlier. Hog kill totaled 6.73 million head, also up 9 percent from last year. The average live weight increased 2 pounds to 250.

Lamb and mutton production, at 28.0 million pounds, was up 1 percent from last year. Slaughter totaled 450,600 head, also up 1 percent. The average live weight increased 1 pound to 122.

January-July red meat production totaled 22.4 billion pounds, up 1 percent from the comparable period a year earlier. Accumulated beef production was down 1 percent, veal was down 4 percent, while pork was up 3 percent and lamb and mutton production was up fractionally.

CATTLE ON FEED IN 7 STATES UP 5 PERCENT FROM LAST YEAR

Cattle and calves on feed August 1, 1991, for slaughter market totaled 7.35 million head, up 5 percent from a year ago and 9 percent above August 1, 1989. This is the largest August number on feed since 1978.

Marketings of fed cattle during July totaled 1.72 million, down 1 percent from last year, but 2 percent above two years ago.

Placements of cattle and calves on feed in the 7 states during July totaled 1.32 million head, down 13 percent from last year but 2 percent above July 1989. Net placements of 1.23 million for July were down 15 percent from last year and virtually unchanged from 1989.

Other disappearance totaled 92,000 head compared to 77,000 in July 1990 and 63,000 in July 1989.

JULY WORKER NUMBERS DOWN SLIGHTLY

There were 3.68 million people working on the Nation's farms and ranches during the week of July 7-13, 1991. Self-employed farm operators accounted for 1.58 million of the total workers, along with 611 thousand unpaid workers, and 1.12 million workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 374 thousand workers.

Farm operators paid their hired workers an average wage of $5.57 per hour during the July 1991 survey week. This rate was up 27 cents from a year earlier. Workers paid on an hourly basis earned $5.35 per hour compared with $5.06 last July. Field workers received an average of $5.26 per hour, up 21 cents from the July 1990 survey week. Livestock workers earned $5.16 compared with $4.90 per hour a year earlier.

Self-employed farm operators worked an average of 41.9 hours, 1.2 hours more than the comparable week in 1990. Unpaid workers averaged 39.3 hours, 1.4 hours above last year. Hired employees worked 40.2 hours, 0.3 tenths of an hour more than in July of last year.

Benefits, such as housing and meals, were provided to 38 percent of the hired workers during the survey week. This compared with 43 percent last year.

JULY EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 5.84 billion during July 1991, up 2 percent from the 5.70 billion produced a year ago. Production included 5.02 billion table eggs, 747 million broiler-type hatching eggs, and 66.0 million egg-type hatching eggs. The total number of layers during July averaged 271 million, up 2 percent from a year ago. July egg production per 100 layers was 2,152 eggs, compared with 2,142 in July 1990.

All layers in the U.S. on August 1, 1991, totaled 271 million, up 2 percent from a year ago. The 271 million layers consisted of 229 million layers producing table or commercial type eggs, 39.8 million layers producing broiler-type hatching eggs and 2.84 million layers producing egg-type hatching eggs. Rate of lay per day on August 1, 1991, averaged 69.4 eggs per 100 layers, up fractionally from last year's 69.2 eggs per 100 layers.

Laying flocks in the 20 major egg production states produced 4.77 billion eggs during July, up 1 percent from the 4.73 billion produced a year ago. The number of layers during July averaged 223 million, up 1 percent from a year ago.

Data for the 30 quarterly states (which include **Montana**) were estimated based on the percent change in the 20 states conducting monthly surveys. These monthly states accounted for about 82 percent of the U.S. egg production during the 3-month period, March 1991 through May 1991.

JULY MILK PRODUCTION

Milk production in the 21 major states during July totaled 10.5 billion pounds, 2 percent less than production in these same states in July 1990. June revised production, at 10.6 billion pounds, was 1 percent below June 1990. Production per cow in the 21 major states averaged 1,254 for July, 6 pounds less than July 1990.

The number of cows on farms in the 21 major states was 8.38 million head, 14 thousand head less than June 1991 and 112 thousand head less than July 1990.

During the April-June period, the 21 major states produced 32.7 billion pounds of milk, 84.7 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 states, the U.S. production would be 12.4 billion pounds for July 1991.

WHEAT and BARLEY VARIETIES

Montana's wheat and barley varieties report was made possible with funds provided by the **Montana Wheat and Barley Committee** and the American Malting Barley Improvement Association, Inc. A more detailed varietal report may be obtained from our office upon request.

AUGUST 1 PASTURE & RANGE FEED CONDITION

Montana's pasture and range feed condition on August 1, at 94 percent of normal, was the highest for this date since 1982. Grazing prospects are considered excellent for the remainder of the season, although concern exists for range fires.

AUGUST 1 CROP PRODUCTION

Montana's 1991 all wheat crop is forecast at 160.2 million bushels, 4 percent above the July forecast, and the fourth largest crop on record. The crop is 10 percent greater than last year, and will set a new record yield per acre. Winter wheat production, at 72.2 million bushels, is 6 percent above the July forecast and 17 percent below last years' production. Winter wheat suffered extensive winter kill, but the surviving acreage has tied the record yield of 38 bushels per acre. Hard spring wheat production, at 82.5 million bushels, is 3 percent above July, and 53 percent above last year. The yield per acre, at 33 bushels, is 2 bushels over the old record set in 1982. Durum production, at 5.5 million bushels, is unchanged from July, and 24 percent more than 1990. Durum is expected to yield 31 bushels per acre.

Barley production in Montana is expected to be 85.0 million bushels, 2 percent above July and 50 percent more than last year. The expected yield of 50 bushels is a new record. Oats production, at 6.05 million bushels, is more than twice last years output.

Hay production for the State is forecast at 5.24 million tons, 17 percent above last year, and 6 percent greater than the previous record set in 1981. Alfalfa production, at 3.64 million tons, is 8 percent above last year and is also a new record for Montana. Other hay, at 1.6 million tons, is 43 percent above a year ago. Corn for grain production is expected to be 1.26 million bushels, 47 percent above last year. Dry bean production, at 209,000 cwt, is down 5 percent from 1990. Sugar beet production, at 1.227 million tons is down 1 percent.

For the **Nation**, all wheat production is forecast at 2.03 billion bushels, up slightly from last month but 26 percent lower than 1990's level. The final forecast of 1991 winter wheat production is 1.37 billion bushels, up 1 percent from July but down 33 percent from 1990. Durum wheat production is forecast at 114 million bushels, virtually unchanged from July 1 but down 7 percent from 1990. Other spring wheat total production is forecast at 547 million bushels, down 2 percent from July 1 and down 6 percent from 1990.

U.S. total barley production is forecast at 470 million bushels, down 1 percent from last month but 12 percent above the 1990 crop. The expected yield per acre is forecast at 55.8 bushels, compared with last season's 55.9 bushels. All hay production is forecast at 157 million tons, an increase of 7 percent from last year. The larger production is the result of both higher yields and increased acreage. Area for harvest, totaling 63.1 million acres, is up 3 percent from 1990. Alfalfa and alfalfa mixtures production is forecast at 86.2 million tons, 3 percent above last year. The total area cut and to be cut, at 25.8 million acres, exceeds last years's area harvest for alfalfa hay by 2 percent.

The first forecast of the 1991 U.S. corn for grain crop is 7.42 billion bushels, 6 percent below last year's crop. The U.S. average yield per acre is forecast at 107.8 bushels, down 10.7 bushels from last year's yield. The area to be harvested for grain, at 68.8 million acres, is 3 percent above 1990 but virtually unchanged from the June acreage estimate. The first forecast of the 1991 soybean crop is estimated at 1.87 billion bushels, down 3 percent from the previous year. Yield is expected to average 31.8 bushels per acre, 2.2 bushels below 1990.

JULY PRICES RECEIVED

The mid-July 1991 all farm products index of prices received by **Montana** farmers and ranchers decreased less than 1 percent from the whole month of June. The index, at 151 percent of its 1977 base, was 10 percent lower than a year earlier.

The all crops index, at 110, was 7 percent lower than June, and 20 percent lower than a year ago. The only cereal grain to show an increase at mid-July compared with June was oats. Hay prices also declined, reflecting continued good forage conditions and abundant supplies.

Individual commodity prices show all wheat at $2.58, down 14 cents per bushel from June and 64 cents below July a year ago. Barley was $1.89 per bushel, down 29 cents from last month and 51 cents below the previous year. Oats, at $1.43 per bushel, were up 13 cents from June and 14 cents above July 1990.

The all livestock index, at 188, was up 3 percent from last month, but 3 percent lower than a year ago. Compared with last month, higher prices were received at mid-July for cattle, sheep and hogs, while lamb prices declined. Calf prices were unchanged.

The July **U.S.** all farm products index of prices received decreased 2.6 percent from June to 151 percent of its January-December 1977 average. Decreases in the prices of tomatoes, oranges, soybeans, and peaches were partially offset by higher prices for eggs, milk, celery, and broilers. The index was the same as a year ago.

JULY 1 CATTLE INVENTORY UP 2 PERCENT

All cattle and calves in the United States as of July 1, 1991, totaled 109.8 million head, up 2 percent from the July 1 level of both a year ago and two years ago. This is the largest July 1 inventory since July 1 1986.

All cows and heifers that have calved, 44.5 million, up 1 percent from both years.

- Beef cows, 34.5 million, up 2 percent from both years.
- Milk cows, 10.0 million, down 1 percent from both years.

Other class estimates and the percentage changes from July 1 last year and two years ago, respectively, are as follows:

- All heifers 500 pounds and over, 17.0 million, up 3 percent and up 2 percent.
- Beef replacement heifers, 5.30 million, up 4 percent and up 8 percent.
- Milk replacement heifers, 4.20 million, unchanged and down 7 percent.
- Other heifers, 7.50 million, up 4 percent from both years.
- Steers weighing 500 pounds and over, 15.2 million, up 4 percent and 6 percent.
- Bulls weighing 500 pounds and over, 2.20 million, unchanged from both years.
- Calves under 500 pounds, 30.9 million, up 1 percent from both years.

U.S. CALF CROP UP 1 PERCENT

The 1991 calf crop is expected to be 40.1 million head, up 1 percent from 1990 and virtually unchanged from 1989. Calves born during the first half of the year are estimated at 29.3 million, up slightly from both 1990 and 1989.

CATTLE & CALVES: NUMBER BY CLASS & CALF CROP, UNITED STATES, JULY 1, 1989-91

CLASS	1989	1990	1991	1991 AS % 1990
		1,000 Head		Percent
Cattle and calves	107,700	107,900	109,800	102
Cows and heifers that have Calved:	43,900	44,000	44,500	101
Beef cows	33,800	33,900	34,500	102
Milk cows	10,100	10,100	10,000	99
Heifers 500 pounds and over	16,600	16,500	17,000	103
For beef cow replacement	4,900	5,100	5,300	104
For milk cow replacement	4,500	4,200	4,200	100
Other heifers	7,200	7,200	7,500	104
Steers 500 pounds and over	14,400	14,600	15,200	104

Calf crop 1/	40,102	39,879	40,100	101

1/ For the current year, the calf crop is the number of calves born before July 1 plus the number expected to be born on and after July 1.

CATTLE ON FEED IN 13 STATES UP 8 PERCENT FROM LAST YEAR

Cattle and calves on feed for slaughter market in the 13 states preparing quarterly estimates totaled 9.43 million head, up 8 percent from a year ago and 9 percent above July 1, 1989. This is the largest July number on feed since 1978.

The inventory included 6.16 million steers and steer calves, 10 percent above a year ago. This group accounts for 65.4 percent of the total inventory. Heifers and heifer calves accounted for 3.22 million head, 4 percent above a year ago. By weight group, 1.56 million head of the total inventory weighed over 1,100 pounds.

PLACEMENTS of cattle and calves on feed during the April-June quarter totaled 4.89 million, down 4 percent from last year and 6 percent below June 1989. NET PLACEMENTS of 4.43 million for April-June was down 6 percent from last year and 8 percent below 1989.

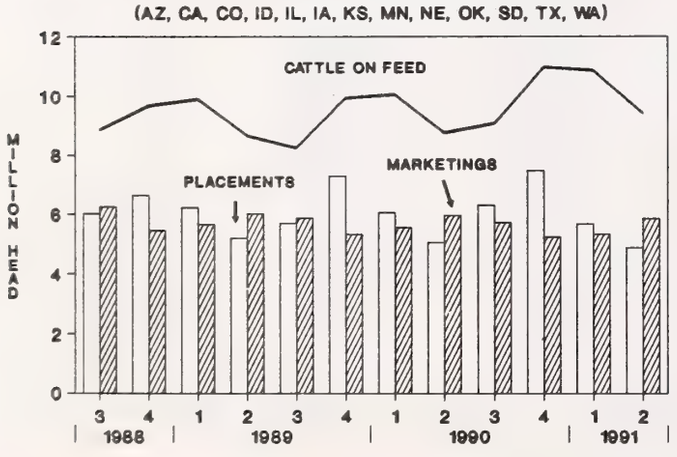
MARKETINGS of fed cattle during the April-June quarter totaled 5.87 million, down 2 percent from last year and 3 percent below two years ago. OTHER DISAPPEARANCE totaled 464 thousand head compared to 400 thousand in 1990 and 410 thousand in 1989.

EXPECTED MARKETINGS JULY-SEPTEMBER UP 5 PERCENT

Cattle feeders expect to market 6.04 million head during the July-September quarter of 1991. This would be up 5 percent from the third quarter marketings in 1990 and 3 percent above 1989.

CATTLE ON FEED, PLACEMENTS, MARKETING
BY QUARTERS FOR 13 STATES

(AZ, CA, CO, ID, IL, IA, KS, MN, NE, OK, SD, TX, WA)



JUNE RED MEAT PRODUCTION

Montana slaughter plants produced 1.4 million pounds of red meat in June 1991. This production is up 4 percent from last month, and up 19 percent from June 1990.

Cattle slaughter, at 1600 head, was up 100 head from last year. Average liveweight of cattle slaughtered was 1,202 pounds, up 123 pounds from last year. Hog slaughter, at 2200 head, was up 600 head from a year ago. Average liveweight was 246 pounds, up 7 pounds from last year.

Commercial red meat production for the United States totaled 3.06 billion pounds, 4 percent below a year earlier. Comparing June 1991 with June 1990: beef production totaled 1.87 billion pounds, down 5 percent from a year earlier. Head kill totaled 2.71 million, down 8 percent. The average liveweight increased 33 pounds to 1,150.

JUNE MILK PRODUCTION

Milk production in the 21 major states during June totaled 10.7 billion pounds, slightly below production in these same states in June 1990. May revised production, at 11.2 billion pounds was virtually the same as May 1990. Production per cow in the 21 major states averaged 1,269 pounds for June, 7 pounds above June 1990. The number of cows on farms in the 21 major states was 8.41 million head, 5 thousand less than May and 82 thousand less than June 1990.

During the April-June period, the 21 major states produced 32.8 billion pounds of milk, 84.7 percent of the U.S. production. If the remaining 29 states not surveyed monthly followed the same pattern as the 21 states, the U.S. Production would be 12.9 billion for April, 13.2 billion pounds for May, and 12.6 billion for June.

The April-June quarterly production of milk for the U.S. was 38.7 billion pounds, virtually the same as the April-June period last year. The average number of milk cows in the U.S. during the April-June quarter was 10.0 million head, 84 thousand less than the same period last year.

Grain and other concentrates fed to milk cows on July 1 1991, averaged 17.3 pounds, the same as July 1, 1990. The value of grain and other concentrates fed to cows on July 1, averaged $7.71 per hundredweight, $0.40 less than the July 1, 1990 price.

MONTANA FARM NUMBERS UP SLIGHTLY

There are 24,800 farms and ranches in **Montana**, 100 more than in 1990. This continues a trend of slightly increased numbers of farms that began in 1975. Montana has 60.3 million acres in farms and ranches in 1991, down from 60.5 million in 1990. The average size of operation declined slightly to 2,431 acres, down from 2.449 acres last year.

The number of farms in the **United States** in 1991 is estimated at 2.105 million, down 2 percent from 1990. Total land in farms is 983 million acres, fractionally below last year. The number of farms has continued to decline faster than land in farms, with the average farm size increasing from 461 acres in 1990 to 467 in 1991.

Texas held its position as the state with the most farms, 185,000, down 1,000 from a year earlier. Missouri is second with 107,000 farms, down 1,000; followed by Iowa with 102,000 farms, off 2,000. The sharpest drops came in Ohio and Indiana, down 4,000 and 3,000 farms, respectively.

	MONTANA			UNITED STATES		
Year	Number of Farms	All Land in Farms	Average size of Farms	Number of Farms	All Land in Farms	Average size of Farms
	Thousands	Million Acres	Acres	Thousands	Million Acres	Acres
1983	24.1	61.3	2,544	2,378.6	1,023.4	430
1984	24.2	61.1	2,525	2,333.8	1,017.8	436
1985	24.3	61.0	2,510	2,292.5	1,012.1	441
1986	24.4	60.9	2,496	2,249.8	1,005.3	447
1987	24.5	60.8	2,482	2,213.0	998.9	451
1988	24.6	60.7	2,467	2,197.1	994.5	453
1989	24.7	60.6	2,453	2,170.5	991.2	457
1990	24.7	60.5	2,449	2,140.4	987.4	461
1991	24.8	60.3	2,431	2,104.6	982.6	467

U.S. MINK PELT PRODUCTION DOWN 27 PERCENT

Mink pelt production in the United States in 1990 totaled 3.37 million pelts, down 27 percent from 1989. Wisconsin, the major mink producing state, produced 855,300 pelts.

By color class, the number of pelts as a percent of the total U.S. production follows: standard--52.8 percent; ranch wild--11.6 percent; demi-buff--8.1 percent; mahogany--7.8 percent; gunmetal--7.6 percent. The remaining color classes accounted for 12.1 percent.

Mink pelts produced during the 1990 crop year were valued at $85.8 million dollars, down 9 percent from $93.9 million a year ago. The average price per pelt for the 1990 crop year was $25.50, compared with $20.40 in 1989 and $32.30 in 1988. Female mink bred to produce kits in 1991 totaled 873,600, down 5 percent from the previous year. Many mink producers reported the mink price motivated them to "pelt out" and reduce or close out their mink operation.

Percent of total females bred to produce kits in 1991 by color class are: standard--56.5 percent; ranch wild--11.3 percent; demi-buff--8.0 percent; gunmetal--7.6 percent; and mahogany--6.5 percent. The remaining color classes accounted for 10.1 percent.

There were 786 mink farms in the U.S. producing pelts in 1990, down 16 percent from a year ago. Leading states were Utah with 180 farms, Wisconsin with 152 farms, and Minnesota with 93 farms.

U.S. JUNE EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 5.62 billion during June 1991, up 2 percent from the 5.53 billion produced a year ago. Production included 4.81 billion table eggs, 746 million broiler-type hatching eggs, and 66.0 million egg-type hatching eggs. The total number of layers during June averaged 271 million, up 2 percent from a year ago. June egg production per 100 layers was 2,071 eggs, compared with 2,069 in June 1990.

All layers in the U.S. on July 1, 1991, totaled 271 million, up 2 percent from last year's total of 265 million. The 271 million layers consisted of 228 million layers producing table or commercial type eggs, 40.4 million layers producing broiler-type hatching eggs and 2.93 million layers producing egg-type hatching eggs. Rate of lay per day on July 1, 1991 averaged 69.3 eggs per 100 layers, compared to last year's 69.5 eggs per 100 layers.

Laying flocks in the 20 major egg production states produced 4.60 billion eggs during June, up 1 percent from the 4.57 billion eggs produced a year ago. The number of layers during June averaged 223 million, up 1 percent from a year ago.

JULY 1 CROP PRODUCTION FORECAST

Montana's 1991 all wheat production forecast is 153.9 million bushels, the fifth largest crop on record. This year's potential yield of 33.6 bushels per harvested acre would tie the record high set in 1982. The forecast is based on conditions as of July 1.

Winter wheat production is estimated to be 68.4 million bushels, 22% less than last year. Nearly 20% of the winter planted acreage was lost due to winter freeze and drought damage. Hard spring wheat production is forecast to be 80 million bushels, 48 percent more than a year ago.

Durum production, at 5.5 million, is up 24%. Yield prospects for spring wheat, at 32 bushels per acres, are a record high. The forecast for winter wheat yield is 36 bushels per acre, durum 31 bushels.

The state's barley production is forecast at 83.3 million bushels, 47% above last year, and the third largest crop on record. Barley yield is expected to be 49 bushels per acre, tying the record set in 1982. Oats production, at 6.05 million bushels, is more than double lasts year's crop.

Montana's pasture and range feed condition was rated at 100 percent on July 1. The only other year condition reached this level was in 1978.

For the Nation, winter wheat production for 1991 is forecast at 1.36 billion bushels, down 6 percent from June 1 and down 33 percent from 1990. This is the lowest production level since 1978. The yield is now expected to average 34.4 bushels per acre, down 1.6 bushels from last month, and 6.3 less than last year. Acreage for grain harvest is 39.5 million acres, unchanged from the "acreage" report and 21 percent below last season.

Other spring wheat production for 1991 is forecast at 556 million bushels, down 5 percent from the record 1990 crop. The yield forecast is 36.4 bushels per acre, down 0.3 of a bushel from last year. Harvested area is estimated at 15.3 million acres, down 4 percent from a year ago.

Oats production is forecast at 280 million bushels, down 22 percent from last year. Yield is forecast at 56.3 bushels per acre, down 3.8 bushels from 1990. Area for harvest is down 16 percent from last year.

Barley production at 476 million bushels is 14 percent above the 1990 production yields are expected to average 56.5 bushels per acre, 0.6 of a bushel more than last year. Area for harvest is expected to be up 12 percent from last year.

JULY 1 PASTURE & RANGE FEED CONDITION

On July 1, Montana's pasture and range feed condition was 100 percent, the first time since 1978. Good rains during May and June replenished top soil moisture and boosted grass growth. Areas of drought in prior years have also recovered to provide good grazing.

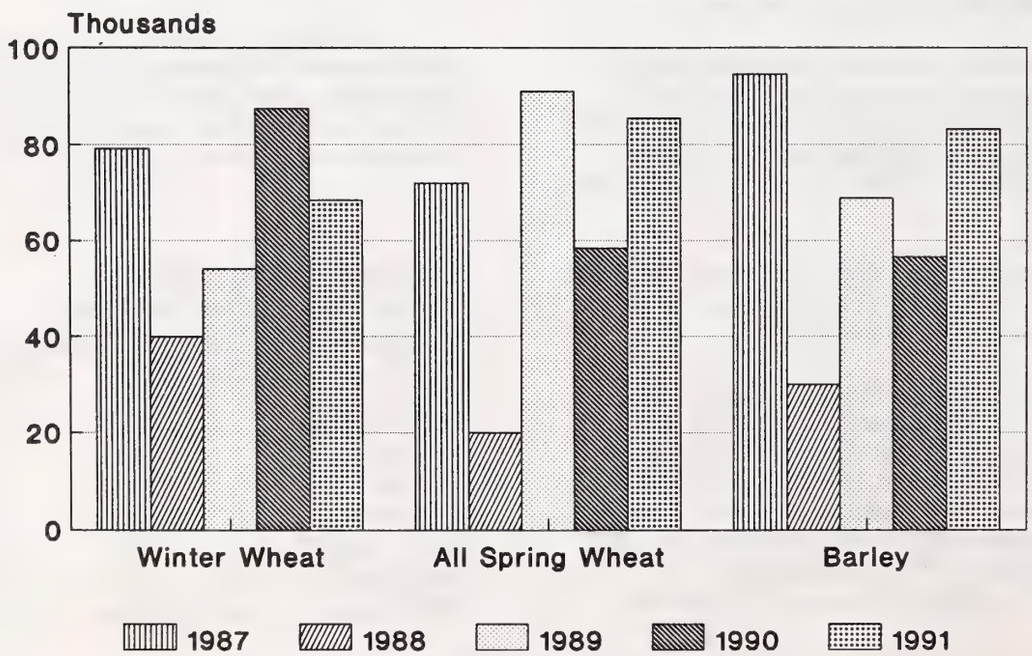
Montana Small Grains Production
July 1, 1991



JUNE AG PRICES RECEIVED

Montana farmers received slightly higher prices for cereal grains in June compared with May, but most livestock prices weakened. Compared with a year ago, this year's June farm prices are lower for most of the products farmers sell. Exceptions were steer and heifer, calf, barley, and oats prices.

The June 1991 index of prices received for all farm products was 161 (1977=100). Last year the June index was 167. The all crops index, at 124, compares with 142 last year, while the livestock and products index, at 194, compares with 188 last year.

For the Nation, the June all farm products index of prices received increased 3 points from May to 155 percent of its January-December 1977 average. Increases in the prices of oranges, pears, and apples were partially offset by lower prices for lettuce, cattle, and hay. Wheat increased slightly in price from May while rice, feed grain, oilseed, and hay prices were down. Cattle, calf, hog, and egg prices were down from May. The average milk price continued unchanged.

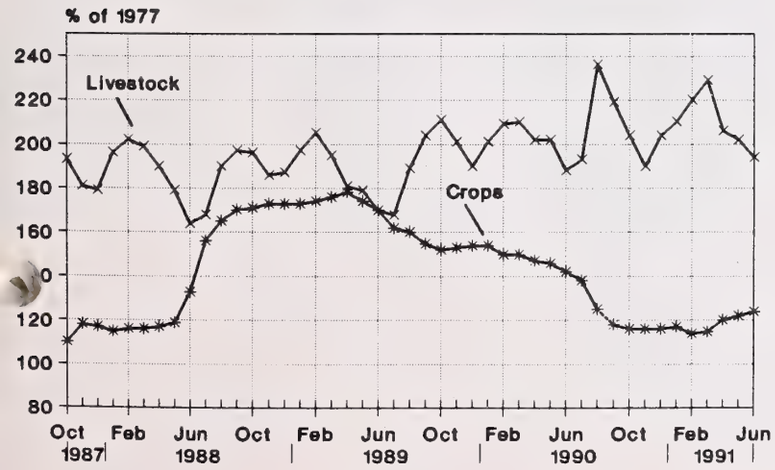
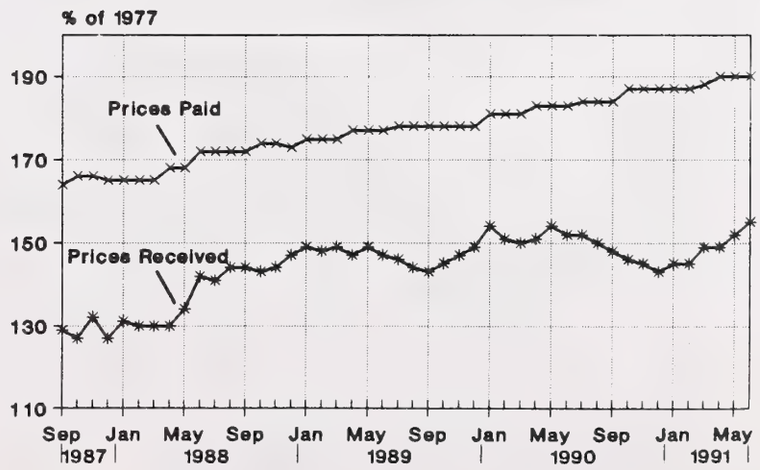
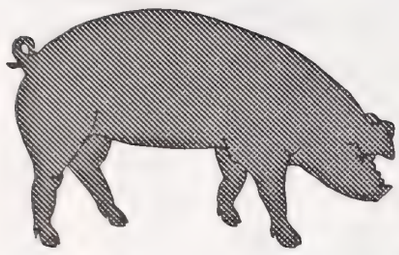
MONTANA CROP & LIVESTOCK PRICES RECEIVED INDEXES



UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED





US HOG INVENTORY INCREASES

U.S. inventory of all hogs and pigs on June 1, 1991 is estimated at 56.3 million head. This is a 5 percent increase from last year and 1 percent above June 1, 1989.

-- Breeding inventory, at 7.47 million head, is 6 percent above last year and 2 percent above two years ago.

-- Market hog inventory, at 48.8 million head, is 4 percent above a year ago and 1 percent above June 1, 1989.

The December 1990-May 1991 U.S. pig crop was 47.5 million head, 5 percent more than last year and slightly above the same period in 1989. Sows farrowing during the six-month period totaled 5.99 million, up 4 percent from last year but 1 percent below the same period in 1989. Pigs saved per litter was 7.92, a new record high for the period, compared with 7.89 last year and 7.82 two years ago. The March-May U.S. pig crop was 26.2 million head, 5 percent above a year earlier.

U.S. hog producers intend to have 6.09 million sows farrow during the June-November period, a 7 percent increase from the actual sows farrowed during the same period in 1990 and 5 percent above two years ago. Farrowings for June-August are expected to be up 7 percent from last year and September-November farrowings are expected to be 6 percent above a year earlier.

HIGHLIGHTS:

1991 Crop Acreages
Cattle on Feed
May Red Meat Production
Grain Stocks
Quarterly Egg Production
Milk Production

The Montana crop acreage and grain stocks estimates in this issue of the Reporter are the result of surveying approximately 2,200 Montana farmers and ranchers during June. Names were selected on a statistical probability basis. For those operators that were interviewed and responded to the survey a SPECIAL THANKS. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

MONTANA FARMERS TO HARVEST LESS WHEAT

Montana farmers plan to harvest 4.58 million acres of wheat in 1991, 12% less than last year, according to the Montana Agricultural Statistics Service. Winter wheat acres for harvest, at 1.9 million, are down 24%; spring wheat, at 2.5 million acres, are up 2%; and durum, at 179 thousand acres, are down 24%. Barley acres for harvest, at 1.7 million, are up 23%. Oats acres for grain, at 110 thousand, are up 57%.

Total plantings of all small grains in Montana, at 7.13 million acres, are down 5% from 1990, and down 14% from the 1989 planted acreage. Montana's total hay acreage is expected to be 2.4 million acres, up 12% from last year. Alfalfa acres, at 1.4 million, are up 4%, and other hay acres at 1.0 million are up 25%. Sugar beet acres for harvest at 56.5 thousand acres are up nearly 3%, and dry beans at 12.3 thousand are down 5%. Corn planted for all purposes at 75 thousand acres is up 15%.

For the nation, winter wheat acreage for grain harvest is expected to total 39.5 million acres, down 21 percent from last year and off 2 percent from the June 1 estimate. Due to disease problems, many soft red winter producing states now have lower acres for grain. These declines, along with lower grain acres in the Pacific Northwest, Colorado, and Oklahoma, have more than offset the increased harvested area expectations recorded in some states. Area planted to spring wheat for 1991 totaled 15.6 million acres, down 7 percent from 1990. Plans are to harvest 15.3 million acres for grain, 4 percent less than last year.

Barley seedings totaled 8.93 million acres, an increase of 9 percent from last year. North Dakota continues to lead all states with 2.90 million acres seeded, up 12 percent from a year earlier. The area to be harvested for grain is expected to total 8.43 million acres, 12 percent more than a year earlier.

CATTLE ON FEED IN 7 STATES UP 9 PERCENT FROM LAST YEAR

Cattle and calves on feed June 1, 1991, for slaughter market in the 7 states preparing monthly estimates totaled 8.59 million head, up 9 percent from a year ago and 10 percent above June 1, 1989. This is the largest June number on feed since 1973.

Marketings of fed cattle during May totaled 1.70 million, down 5 percent from last year and 3 percent below two years ago.

Placements of cattle and calves on feed in the 7 states during May totaled 1.75 million, up 8 percent from both last year and May 1989. **Net placements** of 1.61 million for May was up 10 percent from both last year and 1989. **Other disappearance** totaled 141,000 head compared to 150,000 in May 1990 and 164,000 in May 1989.

[1] Preliminary. [2] Planted for all purposes. [3] Production forecast available July 11, 1991.

MAY RED MEAT PRODUCTION

Montana slaughter plants produced 1.4 million pounds of red meat in May 1991. This production is up 3 percent from last month's production, and up 4 percent from May 1990.

Cattle slaughter, at 1,500 head, was down 200 head from last year. The average liveweight of cattle slaughtered was 1,216 pounds, up 130 pounds from a year ago. Hog slaughter, at 2,200 head, was up 300 head from last year. Average liveweight, at 237 pounds, was up one pound from last year.

Commercial red meat production for the United States totaled 3.29 billion pounds, 1 percent below a year earlier.

Beef production totaled 1.95 billion pounds. This was down 3 percent from a year earlier. The head kill totaled 2.85 million, down 5 percent. The average liveweight increased 31 pounds to 1,140. Veal production, at 23.0 million pounds, was down 9 percent. Calf slaughter totaled 105,200 head, down 25 percent. The average liveweight increased 83 pounds to 371.

Pork production, at 1.29 billion pounds, was up 3 percent. Hog kill totaled 7.13 million head, up 2 percent from last year. The average liveweight increased 3 pounds to 253. Lamb and mutton production, at 30.0 million pounds,was down 3 percent from last year. Slaughter totaled 460,700 head, down 4 percent. The average liveweight increased 1 pound to 129.

January-May red meat production was 16.0 billion pounds and was up 1 percent from the comparable period a year earlier. Accumulated beef production was down 1 percent while veal, pork, and lamb and mutton were each up 2 percent.

MONTANA WHEAT CARRYOVER INCREASES

Montana wheat stocks on June 1, 1991, totaled 65 million bushels, up 14% from a year ago. This amount of wheat represents carryover from previous year's crops and is 23% under the ten-year average. Winter wheat stocks were 37.2 million bushels, up 56% from a year ago, while all spring wheat stocks totaled 27.8 million bushels, down 17%. All wheat stored on farms was 48 million bushels, 74% of the total.

Barley stocks on June 1, were 12.1 million bushels, down 18% from last year. Oats stocks were 1.56 million bushels, down 41%.

For the Nation, old crop all wheat stocks in all positions June 1, 1991, are estimated at 866 million bushels, up 61 percent from June 1, 1990. Stocks on farms are 341 million bushels, also up 61 percent from last June 1. Off-farm stocks total 525 million bushels, up 62 percent from last year. The indicated disappearance for the quarter ending June 1, is 530 million bushels, up 30 percent from the same period in 1990.

Barley stored in all positions on June 1, 1991, is estimated at 136 million bushels, 16 percent below the stocks of June 1, 1990. Of the total barley stocks on hand, 49.0 million are stored on farms, 1 percent above a year earlier. Off-farm stocks, at 86.9 million bushels, are down 23 percent from last year.

MONTANA EGG PRODUCTION

Montana laying flocks produced 41 million eggs in the March through May 1991 quarter, down from 45 million produced during the same quarter last year. Layers for the 1991 quarter averaged 615,000 compared with 670,000 in 1990. The rate of lay in the 1991 quarter was 72.2 eggs per 100 layers compared with 72.7 per 100 layers in the 1990 quarter.

The **Nation's** laying flocks produced 17.3 billion eggs during the March through May quarter, up slightly from the corresponding quarter a year ago. Production included 14.8 billion table eggs, 2.28 billion broiler-type hatching eggs and 200 million egg-type hatching eggs. Layers for the quarter averaged 271 million head, down 1 percent from the 273 million head a year ago.

All layers in the **U.S.** on June 1, 1991 totaled 272 million head, compared with 269 million head a year ago. The 272 million layers consisted of 227 million layers producing table or commercial type eggs, 41.5 million layers producing broiler-type hatching eggs and 2.88 million layers producing egg-type hatching eggs. Rate of lay per day on June 1, 1991 averaged 68.7 Eggs per 100 layers compared with 68.9 For June 1, 1990.

Laying flocks in the 20 major egg production states produced 4.71 billion eggs during May, down 1 percent from the 4.77 billion produced a year ago. The number of layers during May averaged 223 million head, virtually unchanged from a year ago.

MAY 1991 MILK PRODUCTION

Milk production in the 21 major states during May totaled 11.2 billion pounds, virtually unchanged from production in these same states in May 1990. April revised production at 10.9 billion pounds was 1 percent above April 1990. Production per cow in the 21 major states averaged 1,335 pounds for May, 11 pounds more than May 1990. The number of cows on farms in the 21 major states was 8.42 million head, 10,000 head less than April 1991 and 80 thousand less than May 1990.

During the January-March period, the 21 major states produced 31.7 billion pounds of milk, 84.6 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 states, the U.S. production would be 13.3 billion pounds for May 1991.

Winter Wheat Production
Winter Wheat--Selected States
Barley County Estimates
May Prices Received
Pasture & Range Feed Condition
Winter Wheat--by District

WINTER WHEAT PRODUCTION PROSPECTS DOWN SLIGHTLY

Montana's winter wheat production forecast now stands at 62.7 million bushels, slightly below the May 1 estimate, and 28% under last year's total, according to the Montana Agricultural Statistics Service. Acres for harvest at 1.9 million are down 200 thousand from the previous month. The May report did not fully reflect all of the abandonment that resulted from dry soils and cold weather last winter.

Yield per acre, at 33 bushels, is up 3 bushels from the May 1 forecast and reflects good rains during May. Many winter wheat fields have bare spots because of winter kill. The production forecast is based on conditions as of June 1.

Winter wheat production for the U.S. is forecast at 1.45 billion bushels, off 3 percent from May 1 and down 29 percent from 1990. Yields are now expected to average 36.0 bushels per acre, down 0.9 and 4.7 bushels per acre from May 1 and 1990, respectively. Sharp declines in most soft red winter yields paved the way for the overall decline in winter wheat production.

1990 COUNTY BARLEY ESTIMATES

The 1990 barley county estimates will soon be available for distribution. We're publishing the "all barley" figures in this publication, but estimates by class and cropping practice are available from the office upon request. These estimates are the only county figures published for Montana. They are based on acreage and production surveys conducted last fall. Nearly 6,099 questionnaires were tabulated including 4,000 completed by telephone to ensure better coverage in each county. Thanks to those who provided information!

MAY PRICES RECEIVED

Montana farm prices continue to be strong for livestock. Compared with a month earlier, mid-May prices were higher for lambs, hogs, steers and heifers. Calves and sheep were unchanged. Higher prices during mid-May were also noted for all wheat and barley, but all hay and oats were lower. When compared to prices received a year ago, most crop prices were lower.

Compared with the previous month, May's prices were as follows: all wheat was $2.79 a bushel--up 14 cents; barley was $2.61 a bushel--up 9 cents; oats were $1.30 a bushel--down 1 cent; all hay was $58 a ton--down $2.00; steers and heifers were $86.70 a cwt.--up $1.60; cows were $55.10 a cwt.--up $1.20; calves were $101 a cwt.--unchanged, lambs were $52--up $2.00.

The May Montana prices received index for all farm products was 168 (1977=100), 3 points higher than last month but 8 points below May 1990. The all crops index was 125, up 5 points from April but 21 points below last year. The livestock and products index, at 206, was unchanged from April and up 4 points from May 1990.

The **U.S.** May all farm products index of prices received increased 3 points from April to 152 percent of its January-December 1977 average. Increases in the prices of potatoes, lettuce, and hogs were partially offset by lower prices for cattle, eggs, and corn.

The index was 2 points below a year ago. Lower prices for milk, wheat, hogs, and corn were the major contributors to the decline from May 1990. Higher prices for cattle, tomatoes, lettuce, and apples were partially offsetting.

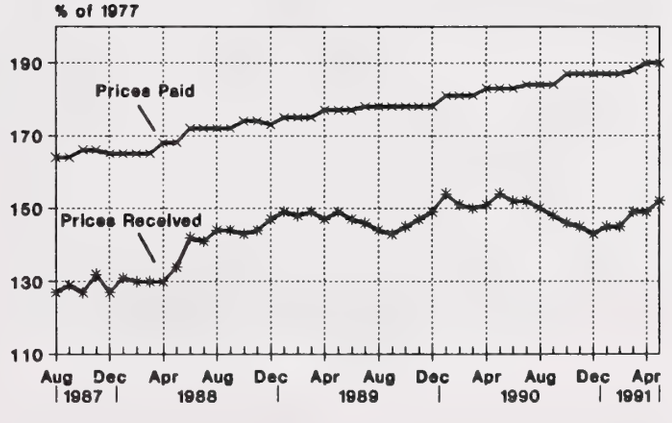
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



JUNE 1 PASTURE & RANGE FEED CONDITION

Montana's pasture and range feed condition rating, of 91 percent of normal is the best June rating since 1978. Rains, which fell over much of the state during May, allowed grasses to grow and develop much better than in recent years. The effects of persistent drought during past years is still evident in north eastern Montana where ranges are green but growth has been slower.

CATTLE ON FEED IN 7 STATES UP 6 PERCENT FROM LAST YEAR

Cattle and calves on feed May 1, 1991, for slaughter market in the 7 states preparing monthly estimates totaled 8.68 million head, up 6 percent from a year ago and 7 percent above May 1, 1989. This is the largest May number on feed since 1973.

Marketings of fed cattle during April totaled 1.72 million, up 10 percent from last year and 9 percent above two years ago. This is the largest number of April marketings on record.

Placements of cattle and calves on feed in the 7 states during April totaled 1.46 million, up 6 percent from last year but 5 percent below April 1989. Net placements of 1.33 million for April were up 7 percent from last year but 6 percent below 1989.

Other disappearance totaled 128 thousand head compared to 125 thousand in April 1990 and 124 thousand in April 1989.

PLEASE RETURN

APRIL MILK PRODUCTION

Milk production in the 21 major states during April totaled 10.9 billion pounds, 1 percent above production in these same states in April 1990. March revised production at 11.1 billion pounds was 1 percent above March 1990.

Production per cow in the 21 major states averaged 1,294 for April, 21 pounds more than April 1990.

The number of cows on farms in the 21 major states was 8.43 million head, 36 thousand head less than March 1991 and 69 thousand less than April 1990.

During the January-March period, the 21 major states produced 31.7 billion pounds of milk, 84.6 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 states, the U.S. production would be 12.9 billion pounds for April 1991.

FARM WAGES FOR APRIL

There were 2.95 million people working on the Nation's farms and ranches during the week of April 7-13, 1991. Self-employed farm operators accounted for 1.48 million of the total, along with 436 thousand unpaid workers, and 826 thousand workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 206 thousand workers.

Farm operators in the Mountain I region, which includes Montana, Idaho and Wyoming, paid their hired workers an average of $5.11 per hour during the April 1991 survey week. This rate was up 27 cents from a year earlier. Workers paid on an hourly basis earned $5.23 per hour compared with $5.10 last April. Field workers received an average of $4.96 per hour, down 4 cents from the April 1990 survey week. Livestock workers in the Mountain I region earned $4.93 per hour, compared with $4.34 a year earlier.

In the U.S., self-employed farm operators worked an average of 36.7 hours, nine-tenths of an hour more than the comparable week in 1990. Unpaid workers averaged 34.3 hours, 1.3 hours above last year. Hired employees worked 40.0 hours, two-tenths of an hour more than in April of last year.

Benefits, such as housing and meals, were provided to 41 percent of the hired workers in the U.S. during the survey week. This compares with 44 percent last year.

POTATO STOCKS

Potato stocks on hand May 1, 1991, in Montana, nearing the end of the seed season, totaled 230,000 cwt, representing 9 percent of total production. This is 130,000 cwt more than a year ago. For the Nation, May 1 potato stocks totaled 54.4 million cwt, up 7 percent from last year but 8 percent below two years ago. Stocks contain 16 percent of fall potato production in the 15 storage states, the same as last year.

Disappearance for the season so far in the U.S. is a record 282 million cwt of potatoes, 6 percent above last year. Processors used 132 million cwt, a gain of 8 percent over last year and 21 percent above two years ago. Disappearance from the start of harvest through April totaled a record high 282 million cwt of potatoes, up 6 percent from last year and 14 percent above two years ago. Shrinkage and loss to date was estimated at 26.0 million cwt, 11 percent above the 23.4 million cwt lost last year and 9 percent above two years ago when losses were 23.9 million cwt.

Western potato stocks totaled 42.1 million cwt in six states, up 5 percent from last year but 14 percent below two years ago. Idaho stocks were up 7 percent from last year and accounted for over half the western holdings. Oregon holdings were down 10 percent and Washington stocks were up 25 percent. Colorado was down 14 percent from a year ago while California stocks were off 9 percent.

1990 MILK PRODUCTION, DISPOSITION, & INCOME

Montana's 1990 milk production at 338 million pounds is up 11 million from last year. The rate per cow, at 14,083 pounds, increased 3 percent from 1989. The number of milk cows averaged 24,000 for 1990, unchanged from a year ago.

Cash receipts from milk marketings during 1990 totaled $44.5 million, compared with $42.0 million last year. Producer returns averaged $13.70 per hundredweight, up $.08 from 1989 returns. Returns were $3.90 per pound of milkfat in 1990, compared with $3.84 per pound in 1989.

U.S. milk production increased 3 percent in 1990 to 148 billion pounds. The rate per cow at 14,642 was 398 pounds above 1989. The annual average number of cows on farms at 10.1 million head was 1 thousand more than the 1989 average.

Cash receipts from marketings of milk during 1990 at $20.2 billion, was 4 percent above 1989. Producer returns averaged $13.81 per hundredweight, 20 cents per hundredweight above the 1989 average. Marketings totaled 146 billion pounds 3 percent above 1989. Marketings include whole milk and producer separated cream sold to plants and dealers as well as milk sold directly to consumers.

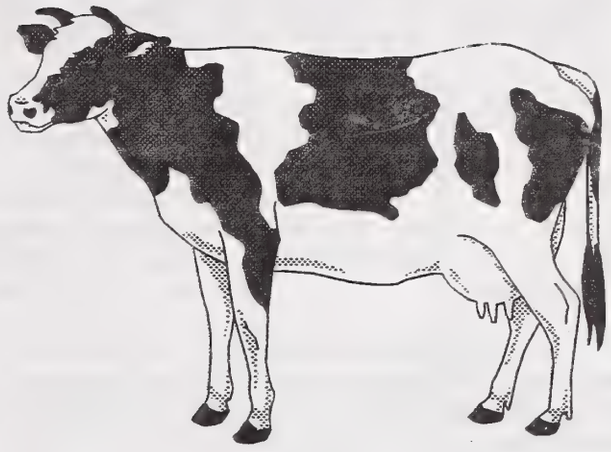
An estimated 2.05 billion pounds of milk were used on farms where produced, 1 percent below 1989. Calves were fed 74 percent of this milk with the remainder consumed in producer households as milk, cream, and butter.

APRIL EGG PRODUCTION DOWN 1 PERCENT

U.S. egg production totaled 5.59 billion during April 1991, down 1 percent from the 5.65 billion produced a year ago. Production included 4.78 billion table eggs, 744 million broiler-type hatching eggs, and 65.0 million egg-type hatching eggs. The total number of layers during April averaged 270 million, down 1 percent from a year ago. April egg production per 100 layers was 2,070 eggs, compared with 2,080 in April 1990.

All layers in the U.S. on May 1, 1991, totaled 269 million, down slightly from a year ago. The 269 million layers consisted of 225 million layers producing table or commercial type eggs, 41.3 million layers producing broiler-type hatching eggs, and 2.77 million layers producing egg-type hatching eggs. Rate of eggs laid per day on May 1, 1991, averaged 68.2 eggs per 100 layers, down 1 percent from last year's 68.9 eggs per 100 layers.

Laying flocks in the 20 major egg production states produced 4.62 billion eggs during April, down 2 percent from the 4.71 billion eggs produced a year ago. The number of layers during April 1991 averaged 223 million, down 1 percent from the 226 million a year ago.



APRIL RED MEAT PRODUCTION

Montana slaughter plants produced 1.3 million pounds of red meat in April 1991. This production is up 24 percent from April 1990, and up 30 percent from last month's production.

The number of cattle slaughtered, at 1,500 head is up 300 head over last year. Average liveweight of cattle slaughtered was 1,180 pounds, compared with 1,114 pounds last April. Hog slaughter, at 2,400 head was up 700 head from a year ago. Average liveweight was 233 pounds, up 3 pounds from last year.

Commercial red meat production for the United States totaled 3.29 billion pounds, 8 percent above a year earlier. Beef production totaled 1.87 billion pounds. This was up 7 percent from a year earlier. The head kill totaled 2.74 million, up 5 percent. The average liveweight increased 8 pounds to 1,145. Veal production at 23.0 million pounds was up 4 percent. Calf slaughter totaled 109 thousand head, down 17 percent. The average liveweight increased 85 pounds to 362.

Pork production at 1.36 billion pounds was up 9 percent. Hog kill totaled 7.49 million head, up 8 percent from last year. The average liveweight increased 3 pounds to 252.

Lamb and mutton production at 29.0 million pounds was down 5 percent from last year. Slaughter totaled 457 thousand head, down 6 percent. The average liveweight increased 3 pounds to 127.

January-April red meat production was 12.7 billion pounds and was up 1 percent from the comparable period a year earlier. Accumulated beef production was down fractionally, while veal was up 5 percent, pork was up 2 and lamb and mutton was up 3 percent.

featuring...*GLACIER COUNTY*

Glacier County was created in April of 1919. It occupies 1,916,454 acres of north central Montana. The Canadian border defines it's northern boundary, and the crest of the main range of the Rocky Mountains, its western boundary. Cut Bank is the county seat and this area has an annual average precipitation of 11.99 inches. Nearly one half of Glacier National Park lies within the county's boundaries as the western border of Glacier County runs down the center of the park. The rugged mountains in the west give way to sloping plains in the eastern portion of the county. The Blackfeet Indian Reservation occupies all but the extreme eastern edge of the rest of the county. The east-west length of Glacier County is traversed by the Milk River, Cut Bank Creek, and the Two Medicine River.

The main agricultural industries in the county include hog raising--for which the county ranked 1st in December 1, 1988 inventory--also barley and spring wheat production for which Glacier County ranked 4th for both. Some cattle and sheep are also raised, while other crops produced include durum wheat, winter wheat, oats, and hay.

Crops contributed the greatest amount in cash receipts with $16,399,000 in 1988. Livestock and livestock products brought $15,326,000, and government payments added $11,335,000 for a total cash return of $43,060,000 and a rank of 18th for total cash receipts in 1988.

WINTER WHEAT PRODUCTION AND HAY STOCKS

Montana's wheat growers expect to harvest 89 percent of the winter wheat planted last fall. Based on May 1 condition, 2.1 million acres remain for harvest, down 16 percent from the acreage harvested in 1990.

Montana's winter wheat production is forecast at 63.0 million bushels, down 28 percent from last year. This year's winter wheat projected yield, at 30 bushels per acre, is down 5 bushels from last year.

Winter wheat condition was rated in mostly fair to good condition on May 1. April's moisture helped the crop that withstood a very dry fall and winter. Soil moisture is rated short to adequate in the major growing areas of the state, and the eastern part of Montana has serious moisture reserve problems.

For the Nation, winter wheat production is forecast at 1.50 billion bushels, down 26 percent from 1990. Yields are expected to average 36.9 bushels per acre, down 3.8 bushels from last year. The area to be harvested as grain is expected to total 40.5 million acres, down 19 percent from the previous year. Above normal March temperatures pushed the Kansas crop ahead of normal and caused moisture stress in the Central and Western districts.

Hay stocks on Montana farms as of May 1, 1991, totaled 1.1 million tons, 26 percent above a year ago and more than 3.5 times the May 1, 1989 level. Stocks are up because of a good 1990 crop and relatively mild winter. This year's stocks represent 25 percent of 1990 production.

Nationally, hay stocks on farms totaled 27.1 million tons on May 1, 1991. This is about the same as as last year and 55 percent more than on hand May 1, 1989. Disappearance of hay during the December 1, 1991 to May 1, 1991 period totaled 77.9 million tons. This compares with 74.1 million tons during the same period a year ago.

1990 U.S MANUFACTURED DAIRY

U.S. production of butter in the United States during 1990 totaled 1.30 billion pounds, 1/2 percent more than was produced in 1989. Wisconsin, the leading state, accounted for 25 percent of production followed by California with 21 percent and Minnesota with 9 percent.

Total cheese production, excluding cottage cheeses, was 6.06 billion pounds, 8 percent above the 1989 production. Wisconsin was the leading state with 32 percent of production. American type cheese production at 2.89 billion pounds, was 8 percent above, 1989 and accounted for 48 percent of total cheese in 1990. Italian varieties continued their increase to a record 2.21 billion pounds, 8 percent above the 1989 production. Mozzarella accounted for 78 percent of the Italian production followed by ricotta with 9 percent and provolone with 7 percent. Wisconsin was the leading state in Italian cheese production with 31 percent of production. Creamed cottage cheese at 531 million pounds was down 7 percent from 1989, while lowfat cottage cheese at 302 million pounds was up slightly.

Ice cream production totaled 81 million gallons, down 2 percent. Ice milk at 349 million gallons was down 7 percent. Milk sherbet at 49.8 million gallons was down 5 percent. Frozen yogurt production at 119 million gallons was up 44 percent. The 303 million gallons of soft products (ice cream, ice milk, sherbet, and mellorine) made during 1990 accounted for 24 percent of the total frozen dairy products, excluding yogurt. Ice milk made up the major portion of (85 percent) of soft production. Soft frozen dairy products are sold from direct-serve soft freezer and milk shake machines.

Nonfat dry milk for human food production, at 877 million pounds was virtually unchanged from 1989 production. Dry buttermilk production at 55.9 million pounds was down 8 percent.

Whole milk used for dairy products used 60.6 percent of all milk marketed in the United States compared with 59.4 percent in 1989. Whole milk used for manufacturing (based on milk fat content) totaled 88.6 billion pounds 5 percent more than 1989. The milk equivalent used for butter production consumed 31 percent of milk sold while cheese accounted for 50 percent.

MONTANA MAY 1 PASTURE & RANGE CONDITION

Montana's pasture and range feed condition was reported 73% of normal May 1, 1991. This was 7 points below last year and the same as 1989. Grass growth was slow because soil moisture was short in most areas and late April temperatures were cool.

Conditions were at lowest levels in the northeast part of the state where drought conditions persisted since last year.

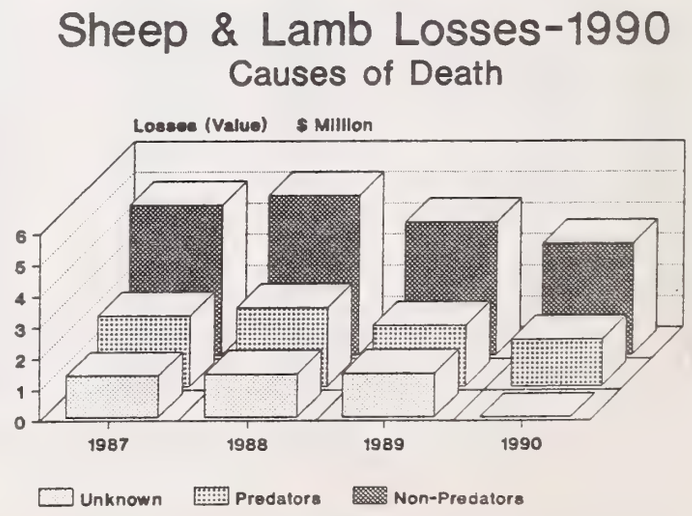
MONTANA SHEEP AND LAMB LOSSES--1990

Montana sheepmen lost 133,000 sheep and lambs to weather, predators, disease and other causes in 1990. Total loss was 6 percent lower than 1989 and represented a value of $5.7 million. The 1990 dollar loss was 25 percent less than the previous year.

Predators caused a $1.5 million loss, non-predator factors caused $3.6 million and unknown causes claimed $0.7 million. Coyote predation remained the single largest cause of death with a $1.1 million loss. This is 20 percent of total value of death losses.

Lambs killed by all predators amounted to 31,500, up 12 percent from last year. Sheep killed by predators totaled 7,600, down 1 percent. Lambs lost to weather, disease, and other non-predator causes totaled 52,900, up 1 percent from 1989. Sheep losses to non-predator factors totaled 27,000, 5 percent less than last year. Lambs lost to unknown causes were 8,600, down 50 percent, and sheep were 5,400, down 23 percent from last year.



MONTANA FARM PRICES STRENGTHEN

Montana farmers received higher prices during mid-April for most of the products they sold compared with a month earlier. Higher prices were received for all wheat, barley, all hay, calves, lambs, and hogs. Lower prices were noted for oats, sheep, milk, eggs, and wool. Steers, heifers, and cows were unchanged.

The April Montana prices received index for all farm products was 174 (1977=100), unchanged from March but 2 points below April 1990. The all crops index, at 124, was up 9 points from March but 23 points below last year. The livestock and products index, at 221, was down 8 points from March but up 19 points from a year ago in April.

The **U.S.** April all farm products index of prices received was unchanged from March at 149 percent of its January-December 1977 average. Increases in the prices of potatoes, onions, cotton, and wheat had the largest upward effect on the index while price decreases for eggs, hogs, cattle, and tomatoes had the greatest effect on the downside.

The index was 2 points below a year ago. Lower prices for milk, wheat, potatoes, and hogs were the major contributors to the decline from April 1990. Higher cattle, tomato, apple, and peanut prices were partially offsetting.

At 111, the April index of food grains was up 3.7 percent from March, but 22 percent lower than April 1990. Wheat averaged $2.63 per bushel, up 10 cents from March.

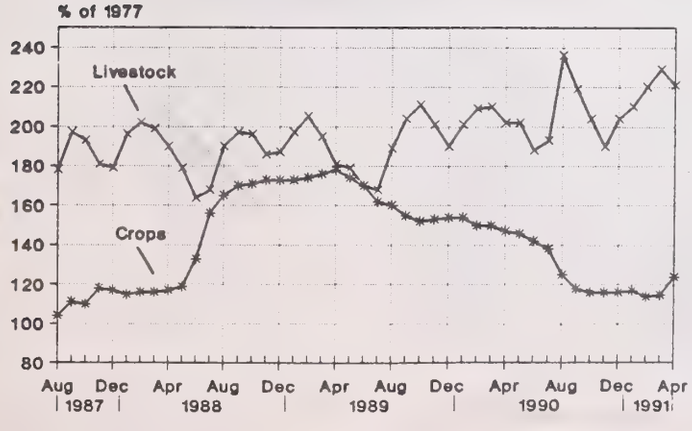
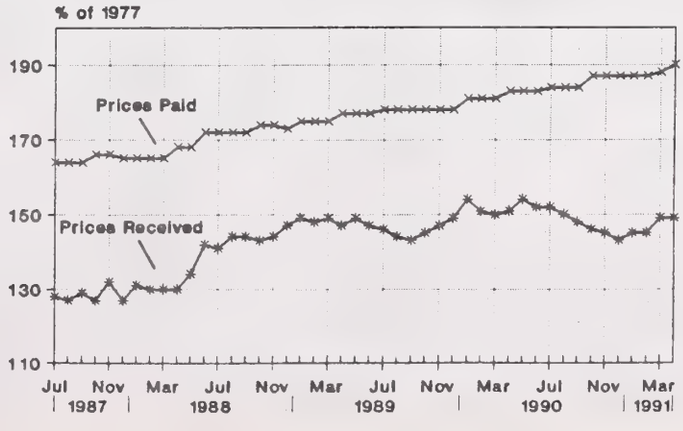
MONTANA CROP & LIVESTOCK PRICES RECEIVED INDEXES



UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



MONTANA EGG RECEIPTS DOWN

Montana egg sales brought 13% less value to producers in 1990 compared with 1989. Value of production at $9.7 million was derived from 172 million eggs produced. Egg production was 4% below 1989. The average price recieved by producers in 1990 was 68 cents per dozen compared with 75 cents last year.

The U.S. combined value of production from broilers, eggs, and turkeys and the value of sales from chickens in 1990, was $14.9 billion, down 1 percent from the $15.0 billion in 1989. Of the combined total, 56 percent was from broilers, 27 percent from eggs, 16 percent from turkeys, and 1 percent from other chickens.

The value of broilers produced during 1990 was $8.37 billion, down 5 percent from the $8.78 billion in 1989. The total number of broilers produced in 1990 was 5.86 billion, up 6 percent from 1989. The increased production was offset by lower prices. The 1990 average price per pound on a live weight equivalent basis was 32.6 cents per pound, compared to 36.6 cents per pound in 1989.

Value of egg production in 1990 was $4.04 billion, up 5 percent from the $3.86 billion in 1989. Egg production totaled 67.8 billion eggs, up 1 percent from the 67.2 billion eggs produced in 1989. In 1990 eggs averaged 71.6 cents per dozen, compared with 68.9 cents in 1989.

The value of sales from chickens (excluding broilers) in 1990 was $94.5 million, down 32 percent from the $138 million a year ago. Prices averaged 9.6 cents per pound compared with 14.9 cents in 1989.

1990 COUNTY WHEAT ESTIMATES

The 1990 wheat county estimates will soon be available for distribution. We're publishing the "all wheat" figures in this publication, but estimates by class and cropping practice are available from the office upon request.

These estimates are the only county figures published for Montana. They are based on acreage and production surveys conducted last fall. Nearly 6,099 questionnaires were tabulated including 4,000 completed by telephone to ensure better coverage in each county. Thanks to those who provided information!

1990 MEAT ANIMAL PRODUCTION, DISPOSITION, AND INCOME

Montana's total marketing of meat animals in 1990 was 1,116 million pounds, 11 percent less than the 1,258 marketed during 1989. Cash receipts from these marketings, at $786.4 million, decreased 8 percent from a year earlier.

Total U.S. marketings of meat animals during 1990 decreased slightly from 1989. Larger cattle and sheep marketings were offset by decreased marketings of hogs and pigs. Higher U.S. prices received for cattle and hogs and lower sheep and lamb prices resulted in total cash receipts increasing to $51.7 billion, up 10 percent from 1989.

The percentage breakdown of contributions to total U.S. cash receipts from marketings of meat animals by species in 1990 were: cattle and calves, 77 percent; hogs and pigs, 22 percent; sheep and lambs, 1 percent.

Production of meat animals during 1990 totaled 62.8 billion pounds, down fractionally from the 1989 production of 63.0 billion pounds. The value of meat animal production was $42.2 billion in 1990 compared with $37.8 billion in 1989.

[1] Winter wheat reseeded to spring wheat.

MARCH RED MEAT PRODUCTION

Montana slaughter plants produced 1.032 million pounds of red meat in March 1991. This production is down 15 percent from March 1990, and down 5 percent from last month's production.

The number of cattle slaughtered, at 1,200 head was down 200 head from last year. Average liveweight of cattle slaughtered was 1,065 pounds, down 30 pounds from a year ago. Hog slaughter, at 2,000 head, was unchanged from last year. Average liveweight of hogs, at 219 pounds, was down 13 pounds from last year.

Commercial red meat production for the **United States** in March 1991 totaled 3.08 billion pounds, down 5 percent from last year. January-March red meat production, at 9.46 billion pounds, was down 1 percent from last year. Percentage changes for 1991 accumulated production by individual components were: beef, down 2; veal, up 5; pork, down fractionally; lamb and mutton, up 6. Commercial red meat production includes slaughter in federally inspected and other plants but excludes animals slaughtered on farms.

FARMLAND VALUE UP 2 PERCENT

Montana farm real estate values rose 2 percent during 1990. On January 1, 1991, the value of farmland and buildings averaged $243 per acre, compared with $238 per acre last year. This year's figure is 22 percent above the 10-year low of $200 dollars per acre recorded in 1987.

U.S. farm real estate values rose 2 percent during 1990, marking the fourth straight increase since their slide in the mid-1980's. On January 1, 1991, the value of farmland and buildings averaged $682 per acre, 14 percent above the 1987 low, but still 17 percent below the record $823 in 1982.

However, after adjusting for inflation of just over 4 percent during 1990, the real value of U.S. farm real estate dropped 2 percent below January 1990 and remained 46 percent below the inflation-adjusted peak in 1981. Because inflation rates of 3 to 4 percent in recent years have partially offset gains in nominal farmland values, a sustained recovery of real farmland values has not yet occurred.

Higher grazing land values and record cattle prices helped support a 7 percent gain in farmland values in the **Mountain States.** Values also advanced 4 percent in the Pacific region. The general economic slowdown in 1990 dampened investor activity, particularly near urban areas. This, in turn, reduced the demand for farmland for nonagricultural uses, putting downward pressure on farmland prices.

MARCH U.S. EGG PRODUCTION UP 1 PERCENT

U.S. egg production totaled 5.88 billion during March 1991, up 1 percent from the 5.83 billion produced a year ago. Production included 5.05 billion table eggs, 759 million broiler-type hatching eggs, and 69.0 million egg-type hatching eggs. The total number of layers during March averaged 272 million, down fractionally from a year ago. March egg production per 100 layers was 2,163 eggs, compared with 2,143 in March 1990.

All layers in the U.S. on April 1, 1991, totaled 270 million, down 1 percent from last year's 272 million layers. The 270 million layers consisted of 227 million layers producing table or commercial type eggs, 40.5 million layers producing broiler-type hatching eggs, and 2.87 million layers producing egg-type hatching eggs. Rate of lay per day on April 1, 1991, averaged 70.0 eggs per 100 layers, up fractionally from last year's 69.7 eggs per 100 layers.

Laying flocks in the 20 major egg production states produced 4.86 billion eggs during March, down slightly from the 4.88 billion produced a year ago. The number of layers during March averaged 225 million, down 1 percent from the 227 million a year ago.

Data for the 30 quarterly states were estimated based on the percent change in the 20 states conducting monthly surveys. These monthly states accounted for about 83 percent of the U.S. egg production during the 3-month period, December 1990 through February 1991.

JANUARY-MARCH MILK PRODUCTION

Milk cows on **Montana** farms produced 84 million pounds of milk in the January-March quarter of 1991. This production is up 4 percent from the comparable period in 1990. The average number of milk cows on farms for the quarter was 24,000 head, unchanged from a year ago. Milk production per cow averaged 3,490 pounds for the three months, up 3 percent from last year.

Montana dairymen fed an average of 16 pounds of grain concentrates per cow on April 1, 1991, up a half-pound from last year. The value of grain fed was $6.90 per cwt, down 40 cents from 1990.

The quarterly production of milk for the U.S. was 37.5 billion pounds, 2 percent above the January-March period last year. The average number of milk cows in the U.S. during the January-March quarter was 10.1 million head, 23 thousand less than the same period last year.

Grain and other concentrates fed to milk cows on April 1 1991, averaged 17.6 pounds, 0.5 of a pound less than April 1, 1990. The value of grain and other concentrates fed to cows on April 1, averaged $7.77 per hundredweight, $0.23 less than that of April 1, 1990.

MONTANA POTATO STOCKS UP 27 PERCENT

There were 1.4 million cwt of potatoes stored in Montana on April 1, 1991, up 27 percent from the 1.1 million cwt on April 1 of last year. These April 1 stocks represent 56 percent of 1990 production.

U.S. potato stocks totaled 91.9 million cwt on April 1, 1991, up 9 percent from last year but 1 percent below two years ago. This is 27 percent of fall potato production in the 15 storage states, the same as last year. Disappearance for the season so far is a record 244 million cwt of potatoes, 5 percent above last year. Processors used 116 million cwt, a gain of 7 percent over last year and 21 percent above two years ago.

Western potato stocks totaled 69.1 Million cwt in six states, up 7 percent from last year but 6 percent below two years ago. Idaho stocks were up 13 percent from last year and accounted for 57 percent of the western holdings. Oregon holdings are up by 2 percent and Washington stocks are up 7 percent. Colorado is down 9 percent from a year ago while California stocks are off 28 percent.

CATTLE ON FEED UP 8 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed April 1, 1991, for slaughter market in the 13 quarterly states totaled 10.9 million head, up 8 percent from April 1, 1990, and 10 percent above 1989. This is the largest April on feed number since 1973.

The cattle on feed inventory included 7.11 million steers and steer calves, 10 percent above last year and 12 percent above 1989. This group represented 65 percent of the total April number on feed, compared to 64 percent for both last year and 1989. Heifers and heifer calves accounted for 3.70 million, 4 percent above last year and 5 percent above 1989.

Placements of cattle and calves on feed during the January-March 1991 quarter totaled 5.89 million, down 3 percent from 1990 and 5 percent below 1989. **Other disappearance** of 462 thousand head leaves net **placements** at 5.43 million. **Marketings** of fed cattle for slaughter during January-March totaled 5.54 million, 1 percent below 1990 and 2 percent below the same period in 1989.

Wool & Mohair

1990 WOOL and MOHAIR PRODUCTION

Montana 1990 wool production amounted to 6.226 million pounds, 8 percent above the 1989 output. Wool growers sheared 630,000 sheep in 1990, 53,000 more than in the previous year. Fleece weight averaged 9.9 pounds per head compared with 10 pounds in 1989. Value of wool produced was $5.7 million, down 28 percent from 1989.

Shorn wool production in the United States during 1990 was 88.3 million pounds, down 1 percent from last year. Sheep and lambs shorn during 1990 totaled 11.2 million head, a decrease of 1 percent from 1989. Average fleece weight of shorn wool was 7.86 pounds per head, down 0.03 pounds from 1989. Total value of shorn wool was $69.7 million, down 37 percent from $111 million in 1989.

Mohair production in the five major producing states during 1990 was 16.3 million pounds, down 6 percent from 1989. Goats and kids clipped, at 2.17 million head, were down 12 percent from 1989. Average weight per head clipped was 7.5 pounds compared with 7.0 pounds a year earlier. Value of mohair production was $15.1 million, down 44 percent from 1989.

Planting intentions, grain stocks, and hog estimates in this issue are are the result of surveying approximately 1,500 Montana farmers and ranchers during March. Names were selected on a statistical probability basis.

For those operators who responded to the survey a SPECIAL THANKS! Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

PROSPECTIVE PLANTINGS FOR 1991

Montana farmers intend to plant 7.1 million acres, about 7 percent less than last year. Farmers were surveyed on March 1. Plans are preliminary, depending on changes in weather, market conditions, etc.

The state's all wheat acreage is expected to be 5.045 million acres, down 12 percent from last year. Winter wheat seeded last fall is down 13 percent from a year ago, at 2.35 million acres. Hard spring wheat, at 2.5 million acres, is expected to be down 11 percent. Durum is down 20 percent with 195,000 acres expected to be planted.

Barley planted acreage is expected to be up 9 percent, at 1.75 million acres. Oats planting intentions are up 6 percent, at 170,000 acres; and they expect to harvest 115,000 acres for grain compared with 70,000 acres in 1990. Sugar beet intended plantings, at 57,000 acres, are up 3 percent; dry beans, at 12,000 acres, are down 11 percent; and corn, at 70,000 acres, is up 8 percent. Farmers expect to harvest 2.2 million acres of all hay which reflects an increase of 2 percent.

U.S. all wheat area planted is expected to total 69.0 million acres, down 11 percent from 1990. Winter wheat seeded area is estimated at 51.0 million acres, down 10 percent. The current total is fractionally higher than that published in the winter wheat and rye seedings report released January 11, 1991.

Washington's winter wheat crop has been badly damaged by December freezes. The extent of the winter kill ranges from none to nearly all in areas of several counties. A small percentage of this acreage was reseeded to winter wheat varieties during February. In Kansas, infestations of army cut worms are widespread; localized damage has been moderate to severe.

U.S. durum wheat area planted is expected to total 3.29 million acres, down 8 percent from 1990. Arizona and California seedings were complete in February. The northern durum states' (Minnesota, Montana, and the Dakotas) acreage is down 7 percent. South Dakota growers plan to increase durum acreage over a year ago.

U.S. other spring wheat seeded area is expected to total 14.7 million acres, off 12 percent from last year. Acreage is down in all states, except Washington.

U.S. barley producers intend to plant 8.71 million acres of barley, up 6 percent from the 8.20 million acres seeded in 1990. Growers in North Dakota expect to plant 2.80 million acres, an 8 percent increase. Acreage to be seeded in Minnesota, at 850 thousand, is the same as last year.

[3] Included in all spring wheat and all wheat. [4] Not included in order to avoid disclosing individual operations. * Some data revised.

MARCH PRICES RECEIVED

Montana farm prices continue to be strong for beef cattle. Mid-March steer and heifer prices hit a record $91.10 per cwt, up $1.40 from February and $10.30 above a year ago. Cows were up $2.70 from February. Calves, at $107.00 per cwt, were up $2.00 from February.

Prices were mixed for other Montana livestock. Mid-March lamb prices were $42.20 per cwt, $1.00 above last month but $22.10 below March 1990. Sheep, at $20.50 per cwt, were unchanged from last month but down $4.10 compared with a year ago. Hog prices for mid-March were down $1.90 from last month and $1.80 below a year ago.

During mid-March, Montana farmers received $2.63 a bushel for all wheat, up 10 cents from last month but 98 cents per bushel below March 1990. Barley prices, at $2.35 per bushel, were up 10 cents from February and 11 cents above a year ago.

The Montana farm price index for all products in March was 176 percent of its 1977 base, up 7 points from February but down 5 points from March 1990. The decrease from 1990 is caused primarily by the food grains index, which, at 115 points, is down 43 points from a year ago.

Nationally, the March all farm products index of prices received increased 3 points from February to 148 percent of its January-December 1977 average. Increases in the prices of eggs, oranges, cattle, and upland cotton were partially offset by lower prices for milk, sweet corn, celery, and strawberries. The index was 2 points below a year ago.

For the U.S., the March cattle price and March calf price were each at record high levels. The cattle price exceeded the previous record in February 1991 by $1.00, while the calf price exceeds its previous record, also set in February, by $2.00. Higher citrus prices reflected shorter supplies caused by the December freeze in California and also higher quality Valencia oranges moving to market. Egg prices reflected a strong seasonal demand. The cotton price was at the highest level since January 1981. Corn, oats, and sorghum prices increased slightly. Rice and wheat prices were also up but soybeans were lower than last month.

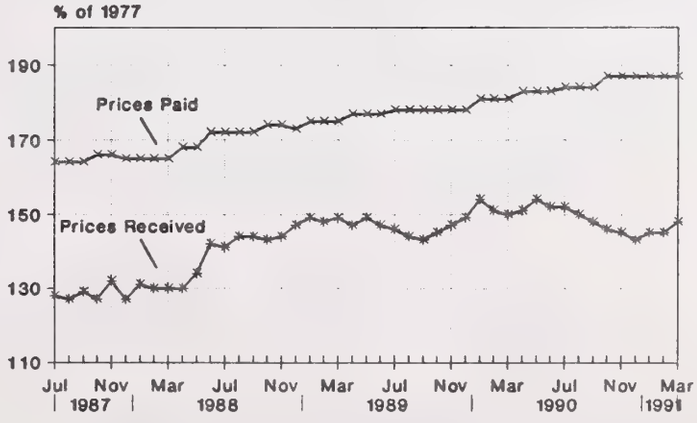
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



MARCH 1 U.S. HOG AND PIG INVENTORY

U.S. inventory of all hogs and pigs was estimated at 52.4 million head on March 1, 1991. This is 2 percent above March 1, 1990, but 4 percent below the December 1, 1990, inventory. Breeding hog inventory, at 6.88 million, was up 1 percent from last year. Market hog inventory, at 45.5 million, was 3 percent above a year ago.

The U.S. pig crop for December 1990-February 1991 totaled 21.0 million head, 3 percent above 1990, but 1 percent below the same period in 1989. A total of 2.67 million sows farrowed during December 1990-February 1991, 3 percent above a year earlier, but 2 percent below the same period two years ago. The litter size during this period averaged 7.87, a new record high for the December-February quarter. This compares to the last two years of 7.83 and 7.77.

There were 2.41 million sows farrowed during the quarter, an increase of 2 percent from last year. Sows farrowing averaged 7.89 pigs per litter, a new record high for the December-February period, compared with 7.83 last year and 7.79 in 1989.

U.S. hog producers intend to have 3.17 million sows farrow during the March-May 1991 period, 1 percent above the actual farrowings for the same period a year ago. Farrowing intentions for the June-August 1991 period of 2.94 million sows, is up 2 percent from the actual farrowings a year earlier.

FEBRUARY RED MEAT PRODUCTION

Montana slaughter plants produced 1.1 million pounds of red meat in February 1991, down 13 percent from last month, but up 4 percent from February 1990.

The number of cattle slaughtered, at 1,300 head, is up 100 head from last year. Average live weight of cattle slaughtered was 1,080 pounds, down 24 pounds from a year ago. Hog slaughter totaled 1,800 head, unchanged from a year ago. Average live weight, at 215 pounds, was down 15 pounds from a year ago.

Commercial red meat production for the United States in February 1991 totaled 2.95 billion pounds, down 1 percent from last year. January-February red meat production, at 6.38 billion pounds, was up 1 percent from last year. Percentage changes for 1991 accumulated production by individual components were: beef, up 1; veal, up 12; pork, up 1; lamb and mutton, up 3. Commercial red meat production includes slaughter in federally inspected and other plants but excludes animals slaughtered on farms.

Beef production, at 1.69 billion pounds, was down 1 percent. Head kill totaled 2.47 million, down 1 percent. The average live weight increased 22 pounds to 1,163. Veal production, at 26.0 million pounds, was up 10 percent. Calf slaughter totaled 125 thousand head, down 16 percent, and the average live weight increased 81 pounds to 348. Pork production, at 1.20 billion pounds, was down 1 percent. Hog kill totaled 6.64 million head, down 3 percent from last year. The average live weight increased 2 pounds to 250. Lamb and mutton production, at 30.0 million pounds, was up 4 percent from last year. Slaughter totaled 461 thousand head, up 5 percent. The average live weight decreased 2 pounds to 129.

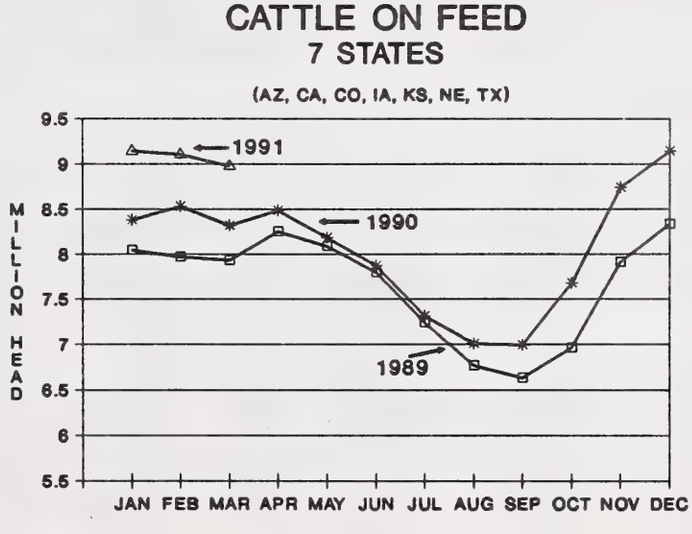
CATTLE ON FEED IN 7 STATES UP 8 PERCENT FROM LAST YEAR

Cattle and calves on feed March 1, 1991, for slaughter market in the 7 states preparing monthly estimates totaled 8.97 million head, up 8 percent from a year ago and 13 percent above March 1, 1989. This is the largest March number on feed since 1974.

Marketings of fed cattle during February totaled 1.48 million, down 1 percent from last year and 3 percent below two years ago.

Placements of cattle and calves on feed in the 7 states during February totaled 1.47 million, up 6 percent from last year but 9 percent below February 1989. Net placements of 1.35 million for February were up 5 percent from last year but 10 percent below 1989.

Other disappearance totaled 113 thousand head compared to 95 thousand in February 1990 and 115 thousand in February 1989.



PLEASE RETURN

1990 RED MEAT PRODUCTION

Montana's 1990 red meat production totaled 20.6 million pounds, up 48 percent from 1989. There were 28,100 cattle slaughtered, up 73 percent from last year. Hog slaughter for 1990, at 25,100 head, was down 8 percent from a year ago. There were 3,600 head of sheep and lambs slaughtered, up 44 percent from 1989.

Red meat production for the United States during 1990 totaled 38.8 billion pounds, down 2 percent from 1989. Production included beef, veal, pork, and lamb and mutton slaughter in commercial plants and on farms. Beef production was 22.7 billion pounds, down 2 percent from 1989. Veal production was 327 million pounds, down 8 percent from 1989. Pork production was 15.4 billion pounds, down 3 percent from 1989. Lamb and mutton production totaled 362 million pounds, up 4 percent from 1989.

Commercial cattle slaughter during 1990 totaled 33.2 million head, down 2 percent from 1989, with federal inspection comprising 97.4 percent of the total. Calf slaughter, at 1.79 million head, was down 18 percent from the previous year with 97.3 percent under federal inspection. Hog kill totaled 85.1 million head, down 4 percent from 1989 with federal inspection comprising 97.4 percent. Commercial sheep and lamb slaughter at 5.65 million head, was up 3 percent from 1989 with federal inspection comprising 96.7 percent.

Average live weight of cattle slaughtered commercially in 1990 was 1,136 pounds, up 2 pounds from 1989. The calf average live weight was 284 pounds for 1990, an increase of 19 pounds from the previous year. Average live weight for hogs increased 1 pound to 249. Sheep and lambs averaged 125 pounds live weight, up 1 pound from 1989.

CHEMICAL USE SERIES NOW AVAILABLE FOR U.S.

The first of a series of NASS publications covering on-farm fertilizer and agricultural chemical use is now available. The data presented in this publication were funded through the President's Water Quality Initiative and begin the process of developing a data series on chemical use.

The Water Quality Initiative is a multi-agency program designed to provide farmers, ranchers, and foresters the knowledge and technical means to respond independently and voluntarily to on- and off-farm environmental concerns. In the past, farm level data have been inadequate to determine the magnitude of water quality problems or the benefits and costs of alternative solutions for the farmer and other affected parties. These data will help fill some of the data needs that analysts require to find solutions to the complex environmental issues of the 1990's.

On-farm fertilizer and chemical use data for 1990 corn, cotton, potatoes, rice, soybeans, winter wheat, other spring wheat, and durum wheat are included in this publication.

Wheat Highlights

- Winter wheat was surveyed in 12 states. Herbicides were used on 34 percent of the acreage. Insecticide and fungicide use were also collected, although these pesticides were not used on significant acreages at the 12 state level. Nitrogen was applied on 83.7 percent of the acreage. Phosphorous and potassium were applied on 47.8 and 18.1 percent of the acreage, respectively. The two most commonly used herbicides were 2,4-D and chlorsulfuron, which were used on 16 percent and 13 percent of the acreage, respectively.

- Herbicides were used on 89 percent of the other spring wheat acreage in the 4 states surveyed (MN, MT, ND, SD). Insecticides and fungicides were used by growers, but not on a significant portion of the acreage. A total of 68.4 percent of the acreage was treated with nitrogen fertilizer. Phosphorous and potassium were applied on 61.0 and 24.3 percent of the acreage, respectively. The two most commonly used herbicides were 2,4-D and MCPA, which were used on 53 percent and 32 percent of the acreage, respectively.

- In North Dakota, durum wheat growers applied herbicides to 90 percent of the acreage. Data about insecticides and fungicides were collected but amount of acreage receiving these chemicals was not significant. A total of 58.0 percent of the acreage received a nitrogen fertilizer treatment and phosphorous was applied on 56.0 percent of the acreage. Relatively little potassium was applied. The two most commonly used herbicides were also 2,4-D and MCPA, which were used on 50 and 34 percent of the acreage, respectively.

If you would like additional information, call or write our office.

EGG PRODUCTION

Montana laying flocks produced 38 million eggs in the December 1990 through February 1991 quarter, compared with 44 million during the same quarter last year. Layers for the 1991 quarter averaged 580,000 compared with 670,000 in 1990.

The **Nation's** laying flocks produced 17.0 billion eggs during the December through February quarter, up 2 percent from the corresponding quarter a year ago. Production included 14.7 billion table eggs, 2.10 billion broiler-type hatching eggs, and 180 million egg-type hatching eggs. Layers for the quarter averaged 273 million, up 1 percent from the 271 million a year ago.

All layers in the **U.S.** on March 1, 1991, totalled 273 million, compared with 271 million a year ago. The 273 million layers consisted of 230 million layers producing table or commercial type eggs, 40.1 million layers producing broiler-type hatching eggs, and 2.95 million layers producing egg-type hatching eggs. Rate of lay per day on March 1, 1991, averaged 69.5 eggs per 100 layers compared with 68.5 for March 1, 1990, and 68.2 on February 1, 1991.

U.S. POTATO STOCKS UP 8 PERCENT

Potato stocks on hand March 1,1991 in **Montana** totaled 1.9 million cwt, compared with 1.8 million cwt held a year earlier. Stocks in storage represent 76 percent of production.

For the **U.S.**, March 1, 1991 potato stocks totaled 126 million cwt, up 8 percent from last year and 1 percent above two years ago. This is 38 percent of fall potato production in the 15 storage States, compared with 37 percent last year. Disappearance for the season so far is a record 210 million cwt of potatoes, up 5 percent from last year and 16 percent above 2 years ago. Shrinkage and loss to date was 22.3 million cwt, 13 percent above last year. Processors used 101 million cwt, a gain of 7 percent over last year.

Western potato stocks totaled 92.4 million cwt in six States, up 7 percent from last year but 3 percent below two years ago. Idaho stocks were up 16 percent from last year and accounted for 56 percent of the western holdings. **Montana**, with seed potatoes, is up 6 percent; Oregon holdings are up by 3 percent. Washington stocks are off 1 percent and Colorado is down 6 percent from a year ago. California stocks are off 26 percent.

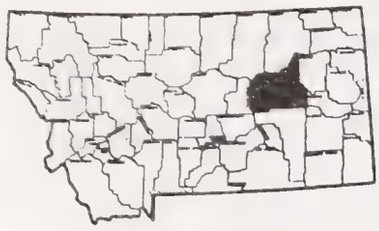
U.S. FEBRUARY MILK PRODUCTION

Milk production in the 21 major states during February totaled 9.96 billion pounds, 2 percent above production in these same states in February 1990. January revised production, at 10.7 billion pounds, was 3 percent above January 1990.

Production per cow in the 21 major states averaged 1,174 pounds for February, 33 pounds more than February 1990. The number of cows on farms in the 21 major states was 8.49 million head, 22 thousand less than January 1991 and 35 thousand head less than February 1990.

During the October-December period, the 21 major states produced 30.7 billion pounds of milk, 84.6 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 states, the U.S. production would be 11.8 billion pounds for February 1991.

featuring...GARFIELD COUNTY



Garfield County lies in east central Montana and the landscape is generally rolling. The entire northern and half of the eastern boundaries are comprised of the Fort Peck Lake. The Mussellshell River makes up the western boundary. Portions of the Charles M. Russell National Wildlife Refuge lie along the banks of Fort Peck Lake within the county. The Fort Peck Dam makes up a section of the extreme northeastern boundary.

Sheep raising is a main agricultural interest in the county as it ranked 2nd in sheep numbers in the January 1, 1989 inventory. The cattle count for the same date showed Garfield County ranked 14th place among the counties for cattle raising. Some hogs are also produced as the county ranked 35th in the December 1, 1988 hog inventory.

Crops grown in the county include oats, winter wheat, spring wheat, and barley, with the county ranking 14th, 15th, 17th, and 23rd, respectively, for those crops.

Cash receipts in 1988 netted Garfield County a total of $29,275,000. The livestock portion of that total amounted to $17,183,000, while crops added $3,575,000. Government payments made up the difference with $8,517,000.

MONTANA WHEAT and BARLEY MOVEMENT

Montana **wheat** shipped to out-of-state destinations in June-November 1990, at 58.5 million bushels, was 30 percent above the same period last year.

Shipments to western destinations (primarily export facilities of Washington and Oregon) were 26 percent above the previous June-November period. Wheat movement to eastern destinations was up 115 percent. Shipments to other destinations (primarily Colorado and Arizona) were up 280 percent.

Rail movement amounted to 52.3 million bushels, up from 39.3 million shipped by rail during the same period in 1989. Trucks carried 6.3 million bushels compared with 5.6 million the previous June-November period.

Montana **barley** shipped to out-of-state destinations in June-November 1990 was 17.9 million bushels, up 60 percent from the same period last year. Barley shipped west amounted to 14.9 million bushels, up 54 percent from the 9.7 million bushels in the June-November 1989 period. Eastern shipments totalled 2.7 million bushels, up 136 percent from the 1.2 million bushels the previous year. Movement to other destinations, totalling 242,000 bushels, was down 22 percent from the same period last year.

MONTANA'S RANK HIGHLIGHTS

♠ Income from cash receipts, excluding Government payments, for crops and livestock gained in rank from 1988 to 1989: crops rose from 34 in 1988 to 31 in 1989; and livestock rose from 31 to 30.

♠ Several commodities ranked higher in 1991. They are: all cows from 10 to 9; beef cows from 7 to 6; milk cows from 43 to 42; cattle on feed from 21 to 20; winter wheat from 11 to 6; durum wheat from 4 to 3; and all hay from 15 to 14.

♠ The following commodities fell from 1990 to 1991: hogs and pigs from 25 to 35; all chickens from 41 to 42; all wheat from 4 to 5; spring wheat other than durum from 3 to 4; oats from 15 to 17; dry beans from 13 to 14; and corn for silage from 20 to 24.

MONTANA'S RANK IN THE NATION'S AGRICULTURE

FEBRUARY PRICES RECEIVED

Montana farm prices continue strong for beef cattle and hogs, but weak for wheat.

The February 1991 index of prices received by Montana farmers for all products, at 169 points (1977=100), is down 11 points from a year ago. The decrease is mainly due to a 35 point drop in the crops index. The food grain index, at 112, compares with 158 a year ago, while the feed grain index, at 128, is up from last year's 123. By contrast, the livestock and products index, at 218, is 9 points above last year in spite of decreases for dairy and wool.

During mid-February, Montana farmers received $2.55 for all wheat compared with $3.62 last year. Steer and heifer prices were $88.90, compared with $81.70 a year ago; lamb prices, at $42.50, were down from $67.30. Montana's all hay price was $59.00, compared with $70.00 last February.

Nationally, the February all farm products index of prices received decreased 1 point from January to 144 percent of its January-December 1977 average. Decreases in the prices of eggs, lettuce, oranges, and onions were partially offset by higher prices for cattle, tomatoes, sweet corn, and hogs. The index was 7 points below a year ago.

U.S. corn prices continued unchanged from January, wheat prices were up slightly, but soybean prices were down from a month earlier. Market egg prices dropped off sharply from the previous month. Cattle and hog prices increased moderately from January. Steers and heifers, cows, and calf prices were all at record-high levels. The average price for oranges was down. The high price commanded for California fresh oranges was offset by an unusually large proportion of freeze-damaged oranges moving to processors.

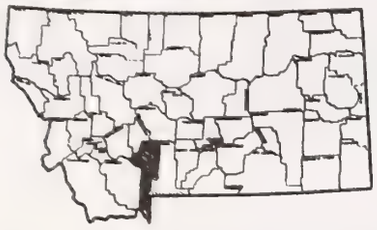
*featuring...*GALLATIN COUNTY



Gallatin County is located on the headwaters of the Missouri River in southern Montana, at the northwest corner of Yellowstone National Park. Between one-third and one-half of the county is contained within the Gallatin National Forest. Created in February of 1865 and covering 1,606,259 acres of land, Gallatin County is a prime agricultural area. The county seat is Bozeman and this area has an annual average precipitation of 18.63 inches.

Cash receipts from the sale of livestock and livestock products turned in $42,793,000 for Gallatin County in 1988. Crops returned $29,537,000 and government payments added $3,552,000. Total cash receipts for the county in 1988 amounted to $75,882,000.

Being one of the larger cattle raising areas, Gallatin County ranked 8th in the January 1, 1989 cattle inventory. The county was in 21st place in the 1989 sheep inventory, and 20th in the December 1, 1988 hog count. Major crops raised in the area include hay, barley, and wheat. Gallatin County was in 4th place in the county rankings for 1989 all hay production, 8th in barley production, and 22nd in all wheat production for 1989.

JANUARY RED MEAT PRODUCTION

Montana slaughter plants produced 1.3 million pounds of red meat in January 1991. This production is down 6 percent from January 1990 and down 40 percent from last month.

The number of cattle slaughtered, at 1,500 head, was down 100 head from a year ago. Average liveweight of cattle slaughtered was 1,075 pounds, up 9 pounds from last year. Hog slaughter, at 2,200 head, was down 100 head from last year, while average liveweight at 220 pounds, was down 26 pounds from January 1990.

Commercial red meat production for the United States in January 1991 totaled 3.43 billion pounds, up 2 percent from last year.

Comparing January 1991 with January 1990:

- Beef production, at 1.97 billion pounds, was up 2 percent. Head kill totaled 2.88 million, up 1 percent. The average liveweight decreased 1 pound to 1,143.
- Veal production, at 31.0 million pounds was up 14 percent. Calf slaughter totaled 154 thousand head, down 14 percent, and the average liveweight increased 65 pounds to 317.
- Pork production, at 1.40 billion pounds, was up 2 percent. Hog kill totaled 7.65 million head, up slightly from last year. The average liveweight increased 2 pounds to 251.
- Lamb and mutton production, at 33.0 million pounds, was up 2 percent from last year. Slaughter totaled 508 thousand head, up 4 percent from last year. The average liveweight decreased 2 pounds to 127.

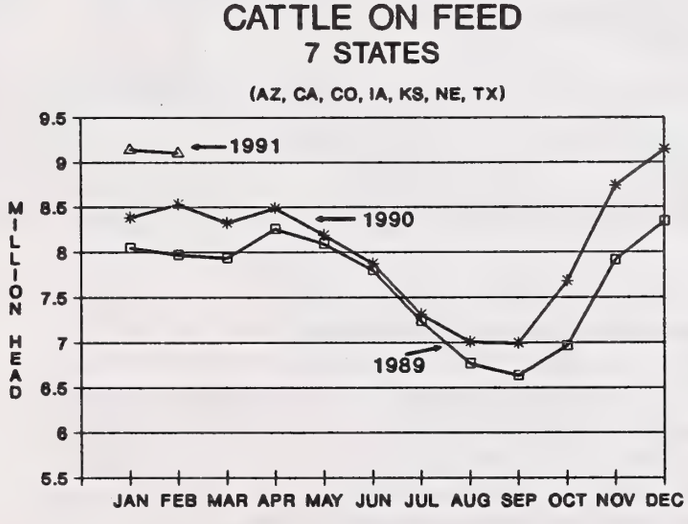
CATTLE ON FEED IN 7 STATES UP 7 PERCENT FROM LAST YEAR

Cattle and calves on feed February 1, 1991, for slaughter market in the 7 states preparing monthly estimates totaled 9.10 million head, up 7 percent from a year ago and 14 percent above February 1, 1989. This is the largest February number on feed since 1974.

Marketings of fed cattle during January totaled 1.71 million, up 4 percent from last year and 2 percent above two years ago.

Placements of cattle and calves on feed in the 7 states during January totaled 1.79 million, down 6 percent from last year but 5 percent above January 1989. Net placements of 1.67 million for January was down 7 percent from last year but 4 percent above 1989.

Other disappearance totaled 118 thousand head compared to 114 thousand in January 1990 and 104 thousand in January 1989.



U.S. FARM WAGES AVERAGED $6.00 PER HOUR

There were 2.61 million people working on the nation's farms and ranches during the week of January 6-12, 1991. Self-employed farm operators accounted for 1.40 million of the total, along with 339,000 unpaid workers, and 706,000 workers hired directly by farm operators. Agricultural service employees working on farms and ranches made up the remaining 168,000 workers.

Farm operators paid their hired workers an average wage of $6.00 per hour during the January 1991 survey week. This rate was up 30 cents from a year earlier. Workers paid on an hourly basis earned $5.62 per hour compared with $5.30 last January. Field workers received an average of $5.69 an hour, up 35 cents from the January 1990 survey week. Livestock workers earned $5.32 compared with $4.99 per hour a year earlier.

Self-employed farm operators worked an average of 30.5 hours, 0.1 hour less than the comparable week in 1990. Unpaid workers averaged 32.5 hours, 0.2 hours above last year. Hired employees worked 37.9 hours, the same number of hours as last January.

Benefits, such as housing and meals, were provided to 45 percent of the hired workers during the survey week. This compares with 46 percent during the January 1990 survey week. Six percent of the workers received both housing and meals, and another 15 percent received housing, but no meals.

JANUARY MILK PRODUCTION

Milk production in the **21 major states** during January totaled 10.7 billion pounds, 3 percent above production in these same states in January 1990. December revised production, at 10.5 billion pounds, was 4 percent above December 1989.

Production per cow in the 21 major states averaged 1,252 pounds for January, 35 pounds more than January 1990.

The number of cows on farms in the 21 major states was 8.51 million head, 36 thousand less than December 1990 and 25 thousand head less than January 1990.

During the October-December period, the 21 major states produced 30.7 billion pounds of milk, 84 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 states, the U.S. production would be 12.6 billion pounds for January 1991.

FEBRUARY 1 POTATO STOCKS

Montana potato producers had 2 million cwt of potatoes on hand February 1, up 0.1 million cwt from a year ago. Most of the potatoes will be utilized as seed for the 1991 potato crop. The stocks represent 80 percent of Montana's 1990 production.

Western states potato stocks totalled 111 million cwt on February 1, 1990, up 6 percent from last year but 1 percent below 2 years ago. Idaho stocks are up 14 percent from last year and accounted for 55 percent of the western holdings. Washington stocks are off 2 percent and Colorado stocks are down 3 percent from a year ago. California stocks, off the greatest amount of any western state, are 25 percent below a year earlier.

Disappearance from the start of harvest through January for the **U.S.** totalled a record high 182 million cwt of potatoes, up 6 percent from last year and 18 percent above two years ago. Shrinkage and loss to date was 20.1 million cwt, 11 percent above the 18.1 million cwt lost last year and 6 percent above two years ago when losses were 19.0 cwt.

Processing in the 8 major states claimed 86.8 million cwt of potatoes from the 1990 crop so far, 7 percent above a year ago and 27 percent above 1988. January usage was 14.4 million cwt compared with 14.0 million cwt last year and 11.2 million cwt two years ago.

JANUARY EGG PRODUCTION UP 2 PERCENT

U.S. egg production totalled 5.81 billion during January 1991, up 2 percent from the 5.70 billion eggs produced a year ago. Production included 5.02 billion table eggs, up 1 percent from last year; 727 million broiler-type hatching eggs, up 8 percent from last year; and 64 million egg-type hatching eggs, down 6 percent from last year. The total number of layers during January averaged 273 million, up 1 percent from the 272 million in January 1990. January 1991 egg production per 100 layers was 2,127 eggs, compared with 2,098 in January 1990.

All layers in the **U.S.** on February 1, 1991, totalled 274 million, slightly above a year ago. The 274 million layers consisted of 230 million layers producing table or commercial type eggs, 40.8 million layers producing broiler-type hatching eggs, and 2.90 million layers producing egg-type hatching eggs. Rate of lay per day on February 1, 1991, averaged 68.2 eggs per 100 layers, up 1 percent from last year's 67.2 eggs per 100 layers.

Laying flocks in the 20 major egg production states produced 4.82 billion eggs during January 1991, up 2 percent from the 4.75 billion produced a year ago. The number of layers during January averaged 227 million, up fractionally from the 226 million a year ago.

MONTANA & U.S. 1990 HONEY PRODUCTION UP

Montana beekeepers produced 7.7 million pounds of honey in 1990, up 22 percent from last year's level. There were 95,000 colonies producing honey in 1990, down 5000 colonies from 1989. Yield per colony, at 81 pounds, was up 29 percent.

Montana honey producers received an average of 48 cents per pound last year, up a penny from 1989. The total value of the 1990 crop is estimated at $3.7 million, up 25 percent from 1989. Honey stocks held by producers on December 15, 1990 totaled 1.2 million pounds, up 41 percent from December 15, 1989. Honey stocks held by producers does not include stocks under loan.

U.S. honey production in 1990 from producers with 5 or more hives, totaled 196 million pounds, up 11 percent from 1989. There were 3.19 million colonies producing honey, down 7 percent from 1989. Yield per colony averaged 61.5 pounds, up from the unusually low 51.4 pounds in 1989. Colonies that produced in more than one state were counted in each state, and yields may be understated at the state level. Producer honey stocks were 30.7 million pounds on December 15, 1990. Weather conditions for honey production were highly variable between regions in 1990. Bee populations were reduced significantly in some areas due to adverse weather, disease, and mite infestations.

Prices for the 1990 crop averaged 52.8 cents per pound, up 3 cents from the 1989 price of 49.8 cents per pound. Prices are based on retail sales by producers and sales to private processors and co-ops. At the U.S. level, prices for each color are derived by weighting state average prices by the state quantities sold. Prices increased for most types of honey in 1990 except for the extra light amber and amber honey retailed by producers. Government payments are excluded from the honey prices quoted in this article.

HIGHLIGHTS:

Cattle and Calves Inventory
Sheep and Lambs Inventory
January Ag Prices Received

PLEASE RETURN

A SPECIAL THANKS to all livestock producers responding to our January 1 cattle and sheep inventory survey. Field and telephone enumerators contacted nearly 1,700 Montana farmers and ranchers early in January. Names were selected on a statistical probability basis. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics for a more efficient production and marketing system.

CATTLE INVENTORY--JANUARY 1, 1991

Montana's January 1, 1991, cattle and calf inventory of 2.4 million head is up 4 percent from the revised January 1, 1990, inventory of 2.3 million. The inventory included 1.428 million beef cows, up 8 percent from January 1, 1990, and 323,000 beef cow replacement heifers, down 1 percent from last January.

Milk cow numbers remained unchanged at 24,000 head, and milk cow replacement heifers increased to 8,000 head--up from 7,000 last year. Other heifers weighing 500 pounds or more, at 168,000 head, were up 1 percent from 1990; steers weighing 500 pounds or more increased from last January to 190,000 on hand, up 5 percent. There were 180,000 calves on hand weighing less than 500 pounds, down 7 percent from the 193,000 on hand January 1, 1990. The 1990 calf crop was 1,400,000 head, up 4 percent from 1989. The average value per head in the 1991 inventory was $755 compared with $675 a year earlier.

All cattle and calves in the **United States** as of January 1, 1991, totaled 99.4 million head, up 1 percent from the revised 98.2 million on January 1, 1990, and up 1 percent from the revised 98.1 million two years ago. This continues the recent upward trend in cattle inventories showing the second January increase since 1982.

All cows and heifers that have calved, at 43.8 million, were up 1 percent from both the 43.4 million a year ago and the 43.3 million of two years ago.

- Beef cows, at 33.6 million, were 1 percent above January 1, 1990, and 2 percent above two years ago.
- Milk cows, at 10.2 million, were virtually unchanged from January 1, 1990, but 1 percent below two years ago.

Other class estimates on January 1, 1991, and the percentage changes from January 1 last year and two years ago, respectively, are as follows:

- All heifers 500 pounds and over, 18.2 million, up 3 percent and up 6 percent.
- Beef replacement heifers, 5.59 million, up 3 percent and up 4 percent.
- Milk replacement heifers, 4.19 million, down 1 percent but up 1 percent.
- Other heifers, 8.38 million, up 4 percent and up 10 percent.
- Steers weighing 500 pounds and over, 16.5 million, up 4 percent and up 7 percent.
- Bulls weighing 500 pounds and over, 2.23 million, up 1 percent and up 2 percent.
- Calves under 500 pounds, 18.7 million, down 2 percent and down 6 percent.
- All cattle and calves on feed for slaughter, 12.7 million, up 10 percent and up 11 percent.

The nation's calf crop was 39.9 million head, down 1 percent from the 40.1 million born in 1989.

JANUARY 1, 1991 SHEEP INVENTORY

The number of sheep and lambs on Montana farms and ranches totaled 683,000 head on January 1, 1991. This inventory is up 3 percent from last year and represents the largest inventory since 750,000 head were recorded January 1, 1974. Ewes one year and older, at 504,000 head, were up 3 percent from last year, while ewe lambs 3 months old and older were down 6 percent. The 1990 lamb crop, at 535,000 head, is up 7 percent from a year ago. Sheep and lambs on feed, at 33,000 head, jumped 43 percent over last year's level and is the largest number since 1985 when 45,000 head were fed. The average value of sheep and lambs on January 1, 1991, was $64.00 per head, down $21.00 from last year.

All sheep and lamb inventory in the United States on January 1, 1991, totaled 11.2 million head, down 1 percent from a year earlier. The value of sheep and lambs on hand totaled $735 million, 18 percent below a year earlier. The average value per head was $65.60, down 17 percent from a year earlier. Stock sheep inventory decreased to 9.47 million head on January 1, 1991, down 1 percent from 9.60 million last year. Ewes one year old and older, at 7.43 million head, was down 2 percent. Ewe lamb inventory totaled 1.34 million head, up 1 percent from a year earlier. Sheep and lambs on feed January 1, 1991, for the slaughter market in the 25 major feeding states totaled 1.73 million head, down 2 percent from a year earlier. The 1990 lamb crop of 7.70 million head decreased slightly from the 1989 lamb crop. The 1990 lambing rate was 101 per 100 ewes one year old and older on hand January 1, 1990, compared with 107 in 1989.

JANUARY AGRICULTURAL PRICES RECEIVED BY FARMERS

The January 1991 index of prices received by Montana farmers and ranchers was unchanged from December 1990 at 162 percent of the 1977 January-December average. The all crops index was down 2 points while the livestock and products index moved up 1 point from last month. Compared with last year, the all crops index was down 40 points while the livestock index was up 4 points.

Individual commodity prices show all wheat at $2.50, down 9 cents per bushel from December and $1.24 below January a year ago. Barley was $2.30 per bushel, up 8 cents from last month and 13 cents above the previous year. Oats, at $1.34 per bushel, was up 7 cents from December but remained 3 cents below January 1990. Hay prices slipped $3.00 per ton below December and averaged $8.00 below last year.

January cow, steer and heifer prices moved down from December, but with marketings expected to consist of more steers and heifers, the all beef cattle price moved up $1.40 per hundredweight. Calves were unchanged from the previous month at $101.00 per hundredweight.

Sheep prices advanced $1.90 and lambs were up $1.30 per hundredweight, but remained substantially below last year. Hog prices were up $1.00, reaching a level $5.90 per hundredweight above last year. Milk prices eased down 5 cents per hundredweight, to average $3.45 below January 1990. Eggs were down from last month and last year. Wool showed no change at 45 cents below a year ago.

The January U.S. all farm products index of prices received increased 1 point from last month to 144 percent of its January-December 1977 average. Increases in the prices of hogs, broilers, and eggs were partially offset by lower prices for soybeans, milk, and tomatoes. The index was 10 points below a year ago. The index of prices paid by farmers for commodities and services, interest, taxes, and farm wage rates for January was 187 percent of its 1977 average. The index was unchanged from October and was up 6 points from last year. Since last surveyed in October 1990, prices were significantly lower for fuels while feeder cattle and calf prices were slightly higher.

MONTANA'S 1990 PRODUCTION HIGHLIGHTS

Montana's all wheat production in 1990, at 145.9 million bushels, was 16 percent above the 20-year average, about the same as a year ago. Even though year to year fluctuations in production have been significant, total wheat production has been mostly static the last two decades.

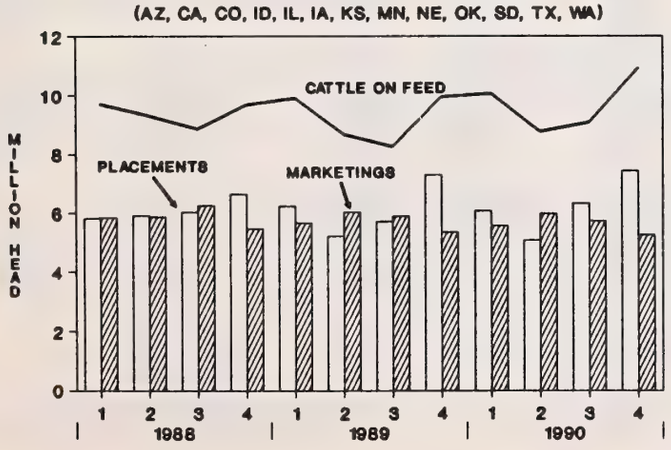
For barley, production in 1990 was 3 percent below the 20-year average, down sharply from a year ago. Barley acreage increased dramatically during the early part of the 1980's but has been mostly decreasing since 1986.

Montana's 1990 crop season was characterized by abnormal dryness in the eastern third of the state and relatively good growing conditions elsewhere.

SEE ANNUAL CROP SUMMARY TABLE ON INSIDE PAGE.

CATTLE ON FEED, PLACEMENTS, MARKETING
BY QUARTERS FOR 13 STATES

(AZ, CA, CO, ID, IL, IA, KS, MN, NE, OK, SD, TX, WA)



DECEMBER RED MEAT PRODUCTION

Montana slaughter plants produced 2.1 million pounds of red meat in December 1990. This production is down 46 percent from last month, but up 92 percent from last year. The number of cattle slaughtered, at 3,200 head, is up 1,800 head from last year. Average live weight of cattle slaughtered was 1,060 pounds, up 168 pounds from a year ago. Hog slaughter, at 2,200 head is up 300 head from last year while average live weight was 224 pounds, down 4 pounds from December 1989.

Commercial red meat production for the **United States** in December 1990 totaled 3.08 billion pounds, down 3 percent from last year. January-December red meat production, at 38.6 billion pounds was down 2 percent from last year. Percentage changes for 1990 accumulated production by individual components were: beef, down 2; veal, down 7; pork, down 3; lamb and mutton, up 5. Commercial red meat production includes slaughter in Federally inspected and other plants, but excludes animals slaughtered on farms.

CATTLE ON FEED UP 10% IN 13 QUARTERLY STATES

Cattle and calves on feed January 1, 1991, for slaughter market in the 13 quarterly states totaled 10.9 million head, up 10 percent from January 1, 1990, and 13 percent above 1989. This is the largest January number on feed since 1979.

The cattle on feed inventory included 7.07 million steers and steer calves, 9 percent above last year and 14 percent above 1989. This group represented 65 percent of the total January number on feed, the same as last year and 64 percent in 1989. Heifers and heifer calves accounted for 3.80 million, 11 percent above both last year and 1989.

Placements of cattle and calves on feed during the October-December 1990 quarter totaled 7.45 million, up 2 percent from 1989 and 12 percent above 1988. **Other disappearance** of 347 thousand head leaves **net placement** at 7.10 million.

Marketings of fed cattle for slaughter during October-December totaled 5.25 million, 2 percent below 1989 and 4 percent below the same period in 1988. Cattle feeders **expect to market** 5.75 million head during the January-March quarter of 1991. This would be up 3 percent from the first quarter marketings in 1990 and 2 percent above 1989.

VALUE OF MONTANA CROP PRODUCTION DOWN 15 PERCENT

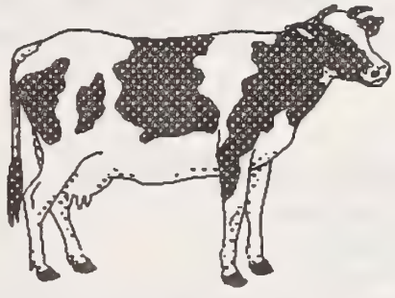
Montana's 1990 crop production is valued at 911.1 million dollars, 15 percent less than a year ago. The decrease is mainly due to sharply lower prices for wheat. The production of wheat, barley, and hay contributed almost 91 percent of total crop value in 1990.

The value of the state's wheat production in 1990, at 398.4 million, was down 25 percent from last year. Hay production, valued at 301.2 million, was down 3 percent, while barley's value, at 127.3 million, was down 16 percent. All production value estimates for 1990 exclude sugar beets which totaled 45 million in 1989, the latest year available.

JANUARY 1 POTATO STOCKS

There were 2.2 million cwt of potatoes stored in **Montana** on January 1, 1991, up 10 percent from a year ago on January 1. The January stocks represent 88 percent of the state's 1990 production.

For the **15 major fall potato states**, there were 186 million cwt of potatoes on January 1, 1991, up 7 percent from last year and 5 percent above two years ago. January storage accounted for 55 percent of fall production this year the same as a year ago. Processors in the 8 major processing states used 72.4 million cwt of fall potatoes so far this season, up 8 percent from last year. Stocks by type are 3 percent reds, 15 percent whites, and 82 percent russets, with more russets and fewer whites than a year ago.



OCTOBER-DECEMBER MILK PRODUCTION

Milk cows on **Montana** farms produced 84 million pounds of milk in the October-December quarter of 1990. This production is up 1 percent from the comparable period in 1989. The average number of milk cows on farms for the quarter was 24,000 head, unchanged from a year ago. Milk production per cow averaged 3,520 pounds for the three months, up 1 percent from last year.

Montana dairymen fed an average of 15 pounds of grain concentrates per cow on January 1, 1991, unchanged from last year. The value of grain fed was $6.95 per cwt, down 55 cents from 1990.

The quarterly production of milk for the U.S. was 36.3 billion pounds, 4 percent above the October-December period last year. The average number of milk cows in the U.S. during the October-December quarter was 10.2 million head, 42 thousand head above the same period last year. Grain and other concentrates fed to milk cows on January 1, 1991, averaged 17.6 pounds, 0.3 pound less than January 1, 1990. The value of grain and other concentrates fed to cows on January 1, averaged $7.84 per hundredweight, $0.18 below the January 1, 1990 price.

1990 EGG PRODUCTION

There were 172 million eggs produced in **Montana** during the year ending November 30, 1990, down 4.5 percent from last year's production. Layer numbers during 1990 averaged 658,000 compared with 702,000 a year earlier. The annual average production per layer on hand in 1990 was 261 eggs, up from 256 eggs per layer in 1989.

There were 760,000 chickens on Montana farms on December 1, 1990, compared with 890,000 on hand last year. The inventory value was $1,748,000, down from $2,270,000 on December 1, 1989.

U.S. egg production during the year ending November 30, 1990, totaled 67.8 billion eggs, up 1 percent from last year's total of 67.2 billion eggs. Layer numbers during 1990 averaged 270 million layers, up slightly from 1989. The annual average production per layer on hand in 1990 was 252 eggs, up from the 1989 average of 250 eggs per layer.

The total number of chickens on hand in the U.S. on December 1, 1990, (excluding broilers) was 352 million head, 1 percent below last year. The total value was $806 million, up from $771 million on December 1, 1989.

DECEMBER EGG PRODUCTION UP 1 PERCENT

All layers in the U.S. on January 1, 1991, totaled 272 million, compared with 271 million a year ago. The 272 million layers consisted of 230 million layers producing table or commercial type eggs, 39.2 million layers producing broiler-type hatching eggs and 2.82 million layers producing egg-type hatching eggs. Rate of lay per day on January 1, 1991, averaged 69.1 eggs per 100 layers, up 1 percent from last year's 68.1 eggs per 100 layers.

Laying flocks in the 20 major egg production states produced 4.86 billion eggs during December, up 1 percent from the 4.82 billion produced a year ago. The number of layers during December averaged 226 million, virtually unchanged from last year.

Data for the 30 quarterly states were estimated based on the percent change in the 20 states conducting monthly surveys. These monthly states accounted for about 83 percent of the U.S. egg production during the 3-month period, September through November 1990.

HIGHLIGHTS:

Winter Wheat Seedings
Hay Stocks
Grain Stocks
December Prices Received
Hogs & Pigs Inventory

Crop acreage, grain stocks and hog and pig estimates included in this issue of the Reporter are the results of surveying approximately 1,800 Montana farmers and ranchers during December. Names were selected on a probability basis. A SPECIAL THANKS to those of you interviewed for this very important end of season survey. Only by your voluntary cooperation can those in agriculture be served with accurate, reliable statistics.

PLEASE RETURN

WINTER WHEAT SEEDED ACRES DECREASE

Montana farmers seeded 2.35 million acres of winter wheat last fall for harvest in 1991. This is down 13 percent from last year, and is 6 percent below the 10-year average.

Winter wheat crop condition was rated mostly fair to good before the abnormally cold weather of late December. Any freeze damage that could have occurred during the first days of very low temperatures, before more snowfall came, cannot be assessed until growth starts in the early spring. There is serious concern that winter damage may be present. Soils remain mostly abnormally dry and stands are spotty in some locations.

Nationally, major hard red winter production states in the Plains plus Montana have seedings totaling 6 percent less than in 1990. Moisture was favorable for seeding in Colorado; the crop is off to a good start, though top growth is short in some areas. Late September rains replenished surface moisture supplies in Kansas allowing rapid seeding progress. Emerged stands in Kansas are rated in good to excellent condition; early November rains boosted secondary root growth.

Dry soils prevented some acreage from being planted in South Dakota; northwestern fields are moisture stressed. Seeding in Oklahoma ran one to two weeks ahead of average. The crop is in good condition with ample soil moisture. Early emergence of the Texas crop was good, since then, windy, dry conditions have slowed growth in parts of the state.

Seeded area in the Pacific Northwest (Idaho, Oregon, and Washington) is off 9 percent from 1990. Michigan seedings are down 31 percent as poor weather limited planting progress.

HAY STOCKS AND 1990 CROP PRODUCTION

Montana farmers and ranchers had 4.0 million tons of hay on hand December 1, 1990, 5 percent more than a year ago. Stocks are up because of open fall grazing. Producers harvested 4.50 million tons of all hay from 2.15 million acres in 1990, up from the 4.47 million tons produced in 1989. There were 3.38 million tons of alfalfa hay and 1.12 million tons of other hay produced in 1990.

The state's total wheat crop for 1990 is now placed at 145.9 million bushels, up slightly from last year's crop of 145.0 million bushels. Production by classes: winter wheat, at 87.5 million bushels, up 62 percent from a year earlier; spring wheat (other than durum), at 53.9 million bushels, down from 85.0 million bushels in 1989; and durum wheat, at 4.47 million bushels, down 1.56 million bushels from last year. Barley production for 1990 was 56.6 million, down from 68.8 million last year. The 1990 oats production was 2.80 million bushels compared with 6.67 million bushels last year.

Sugar beets production for 1990 was 1,240,000 tons, up from the 1,033,000 tons in 1989. Dry bean production, at 220,000 cwt, compares with 130,000 cwt produced in 1989. Potato production for 1990, at 2,492,000 cwt, is up 12 percent from the 2,228,000 cwt harvested last year.

Nationally, hay stocks on farms totaled 105 million tons on December 1, 1990. This is 4 percent more than on hand a year earlier.

MONTANA'S GRAIN STOCKS BELOW LAST YEAR

Stocks of wheat in all storages in Montana on December 1, 1990, totaled 131 million bushels, 8 percent less than a year ago. Farm storages, at 110 million bushels, were down 4 percent, while elevators held 21 million, down 25 percent. On-farm bins held 64 million bushels of winter wheat--up 49 percent, and 46 million bushels of all spring wheat--down 35 percent. In elevators, there were 10 million bushels of winter wheat--the same as last year, and 11 million bushels of all spring wheat--down 39 percent. Durum in all storage positions totaled 7 million bushels, down 13 percent from last year.

Barley stocks totaled 43 million bushels, down 22 percent from a year ago. On farm storages held 34 million, down 24 percent, and elevators held 9 million down 10 percent. Oats stocks in Montana totaled 5.3 million bushels.

Nationally, all wheat stored in all positions on December 1, 1990, is estimated at 1.91 billion bushels, up 34 percent from December 1, 1989. Farm stocks are 762 million bushels, up 29 percent from December 1989. Off-farm stocks, at 1.15 billion bushels, are up 38 percent from last year. The indicated disappearance from all positions for the September-November quarter is 500 million bushels, up 1 percent from the same period in 1989.

DECEMBER PRICES RECEIVED

The Montana farm price index for all products in December was 158 percent of its 1977 base, up 3 points from November, and down 15 points from last year. The all wheat price declined for the twelfth straight month, dropping 2 cents from last month, and $1.22 from a year ago. Prices for most farm products are below last year except for prices for beef cattle which remain high.

The all crops index held steady with last month at 116, but has dropped 38 points from December 1989. Barley prices were up 12 cents from November, and 26 cents from last year. The livestock and products index of 196 compares with 190 for both last month and a year ago. Calf prices, at $100.00 per cwt, were up $2.80 from last month and up $12.40 from December 1989. Steers and heifers, at $87.30, were up $1.80 from November and up $6.70 from December 1989. Lamb prices rose 70 cents from November, and dropped $20.40 from a year ago. Hog prices, at $36.30, declined $8.20 from November and $7.70 from December 1989.

Nationally, the December all farm products index of prices received decreased 1 point from November to 145 percent of its January-December 1977 average. Decreases in the prices of milk, hogs, and lettuce were partially offset by higher prices for cattle, peanuts, and eggs. Fruit and vegetable data for the December report were collected prior to the unseasonably cold weather which hit California about December 21. Consequently, the fruit and vegetable prices in this report do not reflect the effect of the adverse weather.

Steer and heifer prices were at a new record high, up $1.70 from the previous high set in November this year. Prices of cows increased $1.10 from November, reversing a three month decline. The all cattle price was a record high, $1.50 above the previous record set in August 1990. Hog prices were off sharply in November and continued a downward trend in December. Oats and wheat were each at their lowest level for the month of December since 1972, corn increased slightly from November while the soybean price decreased slightly. The all farm products index was 4 points below a year ago. Lower milk and wheat prices were the major contributors to the decline. Higher prices for cattle, peanuts, lettuce, and apples were partially offsetting.

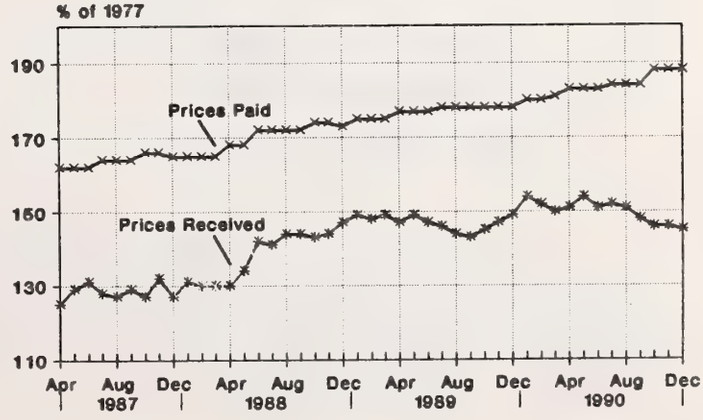
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



DECEMBER 1, 1990 HOG INVENTORY

Montana's hog inventory on December 1, 1990, totaled 185,000 head, down 16 percent from last year. Hogs on hand for breeding, at 24,000 head, were down 20 percent from last year, and market class hogs, at 161,000, were down 15 percent. The 1990 pig crop, at 357,000 head, was down 12 percent from a year ago.

U.S. inventory of all hogs and pigs is estimated at 54.6 million head on December 1, 1990. This is 1 percent above December 1, 1989, but 2 percent below the September 1, 1990, inventory which was revised downward by 360 thousand head.

-- Breeding hog inventory, at 6.87 million, is virtually unchanged from last year but 3 percent below two years ago.

-- Market hog inventory, at 47.7 million, is 2 percent above a year ago but 1 percent below two years ago.

The U.S. pig crop for 1990 totaled 90.1 million head, 2 percent below 1989 and 3 percent below the 1988 pig crop.

-- December 1989-May 1990 pig crop, estimated at 45.3 million head, is 4 percent below a year earlier and 3 percent below the comparable period in 1988.

-- June-November 1990 pig crop, estimated at 44.8 million head, is slightly below last year and 3 percent below the June-November 1988 pig crop.

A total of 5.70 million sows farrowed during June-November 1990, 1 percent below a year earlier and 6 percent below the June-November 1988 period. The litter size during this period averaged a record high 7.86, compared to the previous record of 7.76 in 1989 and 7.62 in 1988.

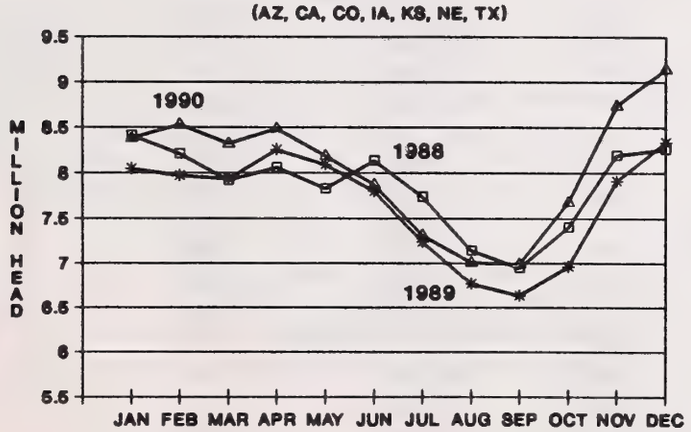
CATTLE ON FEED IN 7 STATES UP 10 PERCENT FROM LAST YEAR

Cattle and calves on feed December 1, 1990, for slaughter market in the 7 states preparing monthly estimates totaled 9.14 million head, up 10 percent from a year ago and 11 percent above December 1, 1988. This is the largest December number on feed since 1978. Marketings of fed cattle during November totaled 1.51 million, up 1 percent from last year but fractionally below two years ago.

Placements of cattle and calves on feed in the 7 states during November totaled 2.01 million, up slightly from last year's record high number and 19 percent above November 1988. Net placements of 1.91 million for November were fractionally above last year and 21 percent above 1988.

Other disappearance totaled 95 thousand head compared to 91 thousand in November 1989 and 112 thousand in November 1988.

CATTLE ON FEED
7 STATES
(AZ, CA, CO, IA, KS, NE, TX)



NOVEMBER RED MEAT PRODUCTION

Montana slaughter plants produced 3.9 million pounds of red meat in November 1990. This production is up 22 percent from last month and up 206 percent from last year. The number of cattle slaughtered, at 6,300 head, is up 4,700 head from last year. Average live weight of cattle slaughtered was 1,076 pounds, 134 pounds above a year ago. Hog slaughter, at 2,200 head, was unchanged from last year while average live weight, at 219 pounds, was down 11 pounds from last year.

Commercial red meat production for the **United States** in November 1990 totaled 3.28 billion pounds, down 4 percent from last year. January-November red meat production, at 35.5 billion pounds was down 2 percent from last year. Percentage changes for 1990 accumulated production by individual components were: beef, down 1; veal, down 8; pork, down 4 and lamb and mutton, up 5. Commercial red meat production includes slaughter in federally inspected and other plants but excludes animals slaughtered on farms.

Kill days in November 1990 included 22 weekdays (including two holidays) and four Saturdays. Kill days in November 1989 consisted of 22 weekdays (including two holidays) and four Saturdays. Comparing November 1990 with November 1989: beef production, at 1.84 billion pounds, was down 3 percent. Head kill totaled 2.70 million, down 3 percent. The average live weight decreased 9 pounds to 1,144.

Veal production, at 29.0 million pounds was up 4 percent. Calf slaughter totaled 155 thousand head, down 15 percent. The average live weight increased 38 pounds to 294. Pork production, at 1.37 billion pounds was down 5 percent. Hog kill totaled 7.54 million head, down 6 percent from last year. The average live weight increased 2 pounds to 253. Lamb and mutton production, at 30.0 million pounds was down 3 percent from last year. Slaughter totaled 481 thousand head, down fractionally. The average live weight decreased 2 pounds to 125.

May you & yours
have a Happy &
Prosperous New Year!

POTATO PRODUCTION AND STOCKS

Producers harvested 8,900 acres of potatoes in Montana and total production was 2,492,000 cwt. Last year, 8,100 acres were harvested providing 2,228,000 cwt of potatoes. Montana producers have 2,300,000 cwt of potatoes in storage as of December 1, compared with 2,100,000 cwt a year ago. The December 1 stocks represent 92 percent of the 2,492,000 cwt produced during 1990.

Fall potato production is estimated at 344 million cwt, up 6 percent from last year and 10 percent above 1988. Area harvested totaled 1.15 million acres, up 6 percent from last year and 7 percent above two years ago. The average yield is 298 cwt per acre, down 1 cwt from last year but 6 cwt above two years ago.

Nine western states produced 239 million cwt of potatoes this year, up 7 percent from last year and 9 percent above two years ago. Farmers harvested 683 thousand acres of potatoes, up 10 percent, while the average yield of 350 cwt per acre was down 3 percent from a year ago. Washington production of nearly 68 million cwt was up 6 percent from last year which is 3 percent better than the November 1 forecast. Idaho production of 112 million cwt was up 10 percent from last year pushed by a substantial increase in acreage. A good crop of potatoes from Colorado's San Luis Valley was 7 percent better than 1989. Montana and Utah had better crops than last year, but both states fell below the November forecast. Oregon, California and Wyoming potatoes were below a year ago.

Storages in the 15 major potato states held 217 million cwt of potatoes on December 1, 1990, up 8 percent from last year and 5 percent above two years ago storage accounted for 65 percent of fall production this year compared with 64 percent a year ago. Processors in the 8 major processing states used 58.0 million cwt of fall potatoes so far this season, up 7 percent from last year. Stocks by type are 3 percent reds, 16 percent whites, and 81 percent russets, the same as a year ago.

Disappearance in the 15 storage states from the start of harvest to December 1 was a record 119 million cwt of potatoes this season, up 4 percent from last year and 20 percent above two years ago. Shrink and loss to date was estimated at 15.6 million cwt, up 7 percent from the 14.5 million cwt lost last year and 3 percent above the 15.1 million cwt lost from the 1988 crop. Processing accounted for a record 58.0 million cwt of fall potatoes so far this season, a gain of 7 percent over a year ago and 28 percent above two years ago.

Six western states held 153 million cwt of potatoes in storage on December 1, a gain of 8 percent from last year and 4 percent above December 1988 stocks. Over half of this storage is in Idaho where 79.5 million cwt are held. Idaho stocks were up 13 percent from a year ago and have gone into storage in good condition. Oregon and Montana stocks are each up 10 percent from last year. Washington holdings are up 3 percent from a year ago showing the effects of heavy movement so far this season. Fall potato stocks in Colorado's San Luis Valley are up 4 percent and appear to be clean after earlier frosted potatoes were sorted out. California stocks are 13 percent below last year.

U.S. NOVEMBER MILK PRODUCTION

Milk production in the 21 major states during November totaled 10.0 billion pounds, 4 percent above production in these same states in November 1989. October revised production, at 10.2 billion pounds, was 4 percent above October 1989.

Production per cow in the 21 major states averaged 1,171 pounds for November, 39 pounds more than November 1989.

The number of cows on farms in the 21 major states was 8.55 million head, 12 thousand more than October 1990 and 23 thousand head more than November 1989.

During the July-September period, the 21 major states produced 31.2 billion pounds of milk, 85.0 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 states, the U.S. production would be 11.8 billion pounds for November 1990.

SEPTEMBER-NOVEMBER EGG PRODUCTION

Montana laying flocks produced 41 million eggs in the September-November quarter, 9 percent less than the same quarter last year. The number of layers for the quarter averaged 635,000 compared with 690,000 in 1989. The rate of lay in the 1990 quarter was 70.6 eggs per 100 layers compared with 71.3 in the 1989 quarter.

The **nation's** laying flocks produced 17.0 billion eggs during the September through November quarter, up 2 percent from the corresponding quarter a year ago. Production included 14.8 billion table eggs, 2.07 billion broiler-type hatching eggs and 181 million egg-type hatching eggs. Layers for the quarter averaged 273 million, up 2 percent from the 269 million a year ago.

All layers in the U.S. on December 1, 1990, totaled 275 million, up 2 percent from the 271 million layers a year ago. The 275 million layers consisted of 234 million layers producing table or commercial type eggs, 38.1 million layers producing broiler-type hatching eggs and 2.78 million layers producing egg-type hatching eggs. Rate of lay per day on December 1, 1990, averaged 69.7 eggs per 100 layers.

Laying flocks in the 20 major egg production states produced 4.75 billion eggs during November, up 2 percent from the 4.63 billion produced a year ago. The number of layers during November averaged 227 million, up 1 percent from a year ago.

MORE DOLLARS GO FOR CONSERVATION

Conservation expenditures by USDA and related state and local conservation efforts may top $3.4 billion this year. That's up over $500 million from 1989 and over 2.5 times the 1986 level.

The $1.8 billion spent by USDA on the Conservation Reserve Program (CRP) is up almost $1.1 billion from 1987 and accounts for most of the increase. However, the net cost of the CRP is less than this amount because of its supply control benefits that cut back USDA expenses on commodity price support programs.

State and local government appropriations to promote soil and water conservation have increased steadily in recent years. Ins some states, these increases have been used to supplement federal CRP rental payments and to help landowners defray the cost of establishing vegetative cover.

IN REVIEW

* Food prices should average 5-7% higher this year. Double-digit price gains in the first half of the year for fruits, pork, eggs, and dairy products are behind the gains. However, gains in the second half of this year are expected to be modest. This assumes that most of the evolving oil price shock will take until next year to hit food prices.

* Global conditions now point to a bumper wheat crop. For the marketing year beginning June 1, average farm prices for U.S. farmers should average about $2.65-$3.05/bushel, down from the $3.72 average of the past 2 years.

* For 45% of all U.S. farm operators, farming is a second job. Off-farm income growth has been critical to boosting farm operator household incomes. Off-farm income has exceeded net farm business income (net cash farm income less depreciation) since 1973.

* Thirty-eight percent of all direct government farm payments went to farm households with a farm net worth of $500,000 or more. Over 85% of all direct payments went to farm households with over $100,000 in net worth.

* The general trade embargo will significantly cut Iraq's food supplies. Because imports usually supply more than 75% of Iraq's caloric needs, its citizens will see very tight food markets in coming months. Last year, about one-fourth of Iraq's ag imports came from the U.S.

featuring...FLATHEAD COUNTY

Flathead County lies in the extreme northwestern portion of Montana. It was created in February of 1893 and has a land area of 3,271,910 acres. Major portions of the Flathead National Forest lie within the boundaries of the county. The northeastern corner of Flathead County is occupied by 577 majestic square miles of Glacier National Park. Several of Montana's beautiful lakes are also within the boundaries of Flathead County. The northern half of Flathead Lake, famous for the cherry orchards that line its shore, is one of those lakes. Timber is the county's biggest natural resource. Kalispell is the county seat, and this area has an average annual precipitation of 15.93 inches and 135 frost-free days.

In 1988, Flathead County ranked 29th in the state for all cash receipts from farming with $27,691,000. The breakdown of this total shows that livestock and livestock products brought in $14,675,000, and crops generated $13,016,000 for rankings of 26th and 16th, respectively. Government payments account for the remaining $1,343,000.

In 1989 crop production, Flathead County ranked 10th in barley, 21st in spring wheat, and 22nd in all hay production. The county is high in fruit production with apples, cherries, plums, and berries being profitable crops. On the livestock side, Flathead County ranked 11th in hog numbers in December 1, 1988. Some cattle and sheep are also raised.

SEASON'S GREETINGS!

Carol Carlson

Ann Bissell

Wendy B.

Merry Christmas from the Ag Stats to you,
The New Year is approaching--1990 just flew,

The older we get, the faster they go,
Each one is a challenge to learn and to grow.

Violet

Ray Stack

The harvest is done, the crops are in the bin,
Prices are terrible, but they'll go up again.

The drought is still with us as we see the dust blow,
It seems Old Mother Nature forgot how to snow.

Although we often dwell on the dark side of things,
We're thankful for food when the dinner bell rings.

Curt

Billye

Vicki McCall

Carol Steffy

Livestock is like gold over mountain and pass,
They fertilize fields and harvest the grass.

The check from the calves fills us with cheer,
In hopes of a new pickup--maybe next year!

We thank you for helping us gather yields and counts,
'Cause when you say "No" our anxiety mounts.

Linda

Bonnie Heller

Our staff hopes this finds you all in good health,
And may '91 bring your family new wealth.

To good crops and good prices we'll all raise a cheer,
And to peace and God's blessings throughout the New Year.

U.S. MANUFACTURED DAIRY PRODUCTS

Butter production was 105 million pounds in October, 10 percent above October 1989 and 24 percent above September 1990.

American type cheese production totaled 237 million pounds, 13 percent above October 1989 and 7 percent above September 1990.

Total cheese output (excluding cottage cheese) was 504 million pounds, 9 percent above October 1989 and 6 percent above September 1990.

Creamed cottage cheese production was 44.5 million pounds, 1 percent below October 1989 but 4 percent above September 1990.

Lowfat cottage cheese production was 25.0 million pounds, 3 percent above October 1989 and 4 percent above September 1990.

Canned evaporated and condensed milk production at 49.1 million pounds was 37 percent above October 1989 and 5 percent above September 1990.

Frozen desserts: (comparisons with October 1989) ice cream (hard)--61.9 million gallons, up 6 percent. Ice milk--26.4 million gallons, down 7 percent. Sherbet (hard)--3.09 million gallons, up 2 percent.

U.S. 1989/90 WHEAT EXPORTS BY CLASS

Tight supplies of Hard Red Winter (HRW), ample supplies of Soft Red Winter (SRW), declines in Chinese and Indian imports, and relatively high prices for certain classes, led to a change in the mix of wheat exported and the destinations of the exports in 1989/90. Hard Red Spring (HRS) and SRW exports expanded to pick up part of the slack created by the tight HRW supplies. Durum exports rebounded to a more typical share of the export market.

The sharpest decline in exports was due to India's absence from the U.S. market (78 million bushels in 1988/89), and a decline of over 90 million bushels in Chinese imports. Soviet imports also declined by 13 percent from a year earlier. The decline in exports was partially offset by a 15 million bushel increase in Japanese imports. There was little change in total exports to Egypt, our fourth largest buyer in 1989/90.

Drought and winter kill limited the availability of HRW for export. HRW exports comprised 29 percent of total wheat exports in 1989/90 compared to almost 45 percent a year earlier. Since 1954/55 at least 40 percent of wheat exports have been HRW.

U.S. HARD RED SPRING WHEAT EXPORTS 1/

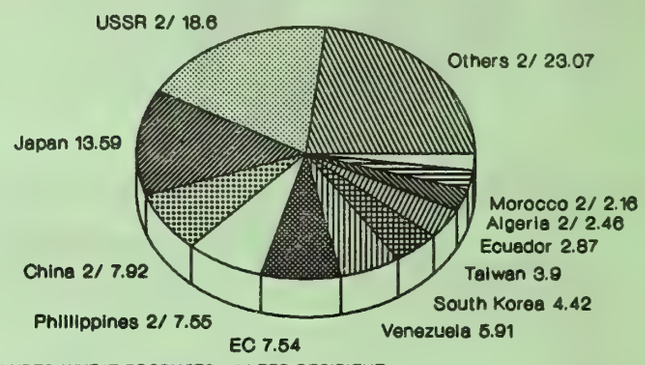
(PERCENTS)



1/ EXCLUDES WHEAT PRODUCTS. 2/ EEP RECIPIENT.
SOURCE: WHEAT SITUATION OUTLOOK--AUGUST 1990.

While both China and the USSR decreased total imports from the United States, their reductions in HRW imports were even larger. China reduced HRW imports by almost 100 million bushels, while increasing HRS imports by about 10 million bushels. The USSR reduced HRW imports by about 90 million bushels. However, the Soviets substituted HRS and SRW for the HRW imports. Soviet imports of HRS increased by 35 million bushels and the Soviets imported almost 30 million bushels of SRW. This is the first time that the Soviets imported SRW from the United States since 1977/78.

With the recovery of the North Dakota durum crop in 1989, durum exports returned to a more normal share of total wheat exports. Exports to Algeria accounted for almost 53 percent of durum exports. Over three-quarters of Algerian sales occurred with Export Enhancement Program (EEP) bonuses averaging about $18.60 per ton. Durum exports to Italy, Turkey, and Venezuela combined to account for over 60 percent of the remaining durum grain exports.

NOVEMBER AG PRICES RECEIVED

Montana farmers have received lower prices for their wheat for the eleventh straight month. November's all wheat price, at $2.53 a bushel, is down 8 cents from October and down $1.17 from a year ago. Wheat prices have not been near $2.50 a bushel since September 1987. The sagging prices are mainly due to an increase in global supplies coupled with a weakened export demand. Barley prices increased slightly during November reflecting increased marketings of malt barley in relation to feed barley. The November price, at $2.32, compares with $2.17 a year ago.

Livestock price changes were mixed from a month ago but generally remain above year ago levels. Steers and heifers, at $86.40 per cwt during November, were up $1.40 from October and $2.70 above a year ago. Calves, at $96.40, were up $1.70 from October and $8.80 above a year ago. Cows were down $3.00 from the previous month but up $1.40 from last year. Hogs, at $49.10 in November, were $1.60 under October but $9.60 above a year ago.

The Montana index of prices received for all farm products in November, at 160 (1977=100), compares with 162 in October and 178 a year ago. The all crops index, at 115, is down 1 point from last month and down 37 points from last year. The livestock and products index, at 201 is down 3 points from October but the same as a year ago.

For the nation, the November all farm products index of prices received decreased 1 point from October to 145 percent of its January-December 1977 average, decreases in the prices of hogs, milk, soybeans, and corn were partially offset by higher prices for oranges, lettuce, and strawberries. Steer and heifer prices were at an all time record high, up 1 percent from the previous record of $80.20 a month earlier. Hog prices moved up in October but dropped off sharply in November. Wool was at the lowest price level since January of 1986. Milk moved to the lowest level since July of 1989.

The November soybean price was at the lowest level since November of 1987, while the all wheat price was the lowest since August of 1987. The corn price continued a downward trend which began in July. The all farm products index was 2 points below a year ago. Lower milk, wheat, and corn prices were the major contributors to the decline from November 1989. Higher prices for cattle, lettuce, and hogs were partially offsetting.

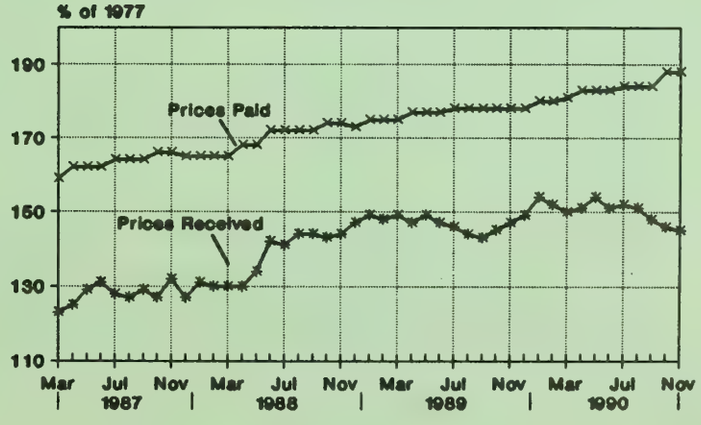
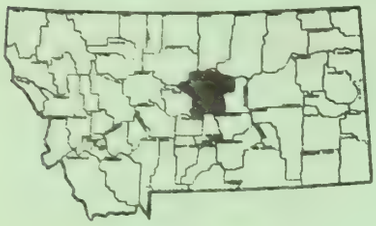
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



*featuring...*FERGUS COUNTY



Prior to 1925, Fergus County was known as the largest county in the United States. Judith Basin and Petroleum counties were created in 1920 and 1925, respectively, from portions of the area known as Fergus County. This still left Fergus County with a land area of approximately 2,777,689 acres.

The entire northern border of the county is formed by a portion of the Missouri River. The land along the river is known as the Missouri Breaks. The Judith Mountains lie in the center of the county, while the Big Snowy and Little Snow Mountains lie along the southern boundary.

Fergus County is a major livestock producing area in the state. In the January 1, 1989 cattle inventory the county ranked 5th, and came up 14th for the January 1 sheep inventory. The December 1, 1988 hog count showed Fergus County in 14th place for number of hogs.

In 1989 crop production, the county ranked 9th in the state for oats and 3rd for all hay; 5th in barley production; 4th in winter wheat production; and 12th in all wheat production. Cash receipts for livestock in 1988 totaled $26,040,000, while crops contributed $24,406,000. Government payments added $10,937,000 for a total cash return of $61,383,000 and a rank of 8th among the counties.

CATTLE ON FEED IN 7 STATES UP 10 PERCENT FROM LAST YEAR

Cattle and calves on feed November 1, 1990, for slaughter market in the 7 states preparing monthly estimates totaled 8.74 million head, up 10 percent from a year ago and 7 percent above November 1, 1988. This is the largest November number on feed since 1978.

Marketings of fed cattle during October totaled 1.61 million, down 1 percent from last year but 2 percent above two years ago.

Placements of cattle and calves on feed in the 7 states during October totaled 2.75 million, up 4 percent from last year and 12 percent above October 1988. Net placements of 2.66 million for October were 3 percent above last year and 13 percent above 1988.

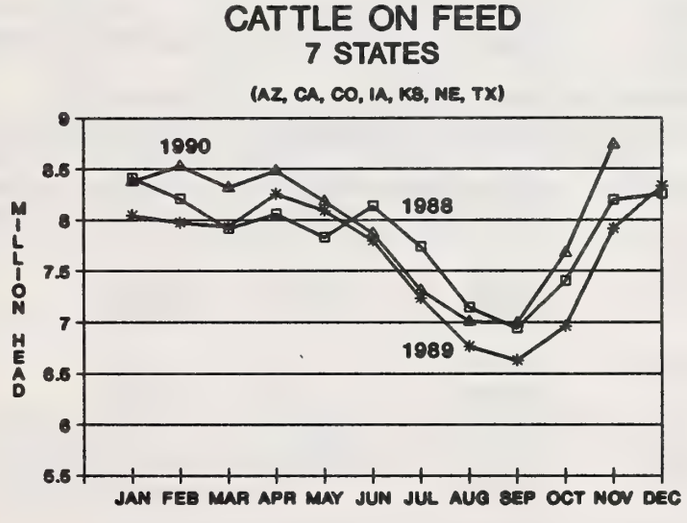
Other disappearance totaled 87 thousand head compared to 71 thousand in October 1989 and 84 thousand in October 1988.

PLEASE RETURN

OCTOBER RED MEAT PRODUCTION

Montana slaughter plants produced 1.2 million pounds of red meat in October 1990. This production is up 159 percent from last month and up 163 percent from last year. The number of cattle slaughtered, at 5,000 head, is up 3,600 head from last year. Average live weight of cattle slaughtered was 1,015 pounds, up a pound from a year ago. Hog slaughter, at 2,600 head, was up 200 head from last year while average live weight, at 223 pounds, was down 9 pounds from last year.

Commercial red meat production for the United States in October 1990 totaled 3.49 billion pounds, down 1 percent from last year. January-October red meat production, at 32.2 billion pounds was down 2 percent from last year. Percentage changes for 1990 accumulated production by individual components were: beef, down 1; veal, down 10; pork, down 3; lamb and mutton, up 6. Commercial red meat production includes slaughter in federally inspected and other plants, but excludes animals slaughtered on farms.

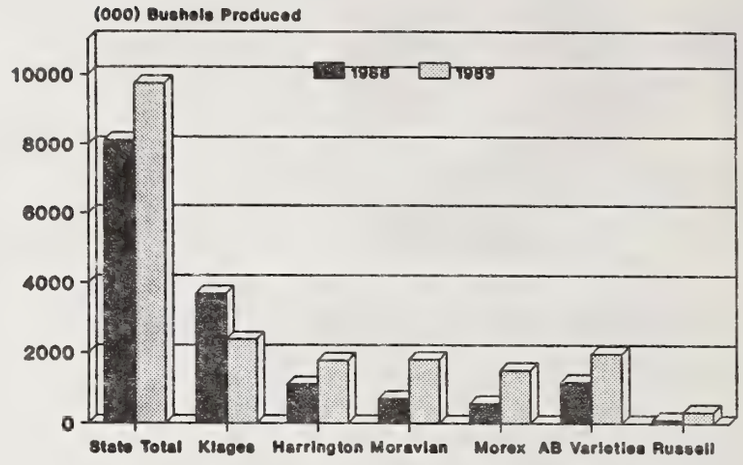


MONTANA MALTING BARLEY–1989 CROP

Maltsters and brewers purchased 9.8 million bushels of Montana's 1989 barley crop to make malt. This was 20 percent more than 1988, but 10 percent less than 1987. The 1989 barley utilization represented 14 percent of the total 1989 barley crop compared with 27 percent in 1988 and 11 percent in 1987.

Montana growers planted 1.7 million acres of barley in 1989. Of the total, about 659 thousand acres were planted to approved malting varieties. If the yield for malting varieties equaled the 66 bushels state average for irrigated barley then nearly 44 million bushels of malting type barley were produced. Since only 9.8 million bushels were used for malt the remaining 34 million bushels either did not make the malting grade or exceeded the demand for malting barley. The top four approved malting varieties for seeded acreage reflect the following malting utilization percentage to production: Harrington 10%, Klages 22%, Clark 3%, Morex 59%.

MONTANA BARLEY VARIETIES USED TO PRODUCE MALT



This survey was requested and funded by the Montana Wheat and Barley Committee.

A special thanks to the maltsters, brewers, and grain firms who cooperated in furnishing data.

NUMBER OF WORKERS DOWN, WAGE RATES INCREASE

A total of 3.32 million persons worked on the nation's farms and ranches during the week of October 7-13, 1990. This compares with 3.38 million workers in October 1989. The workforce was comprised of 1.56 million self-employed farm operators, 528,000 unpaid workers, and 935,000 workers hired directly by farm operators. Rounding out the total were 296,000 agricultural service employees doing work on farms and ranches during the survey week.

The all hired farm worker wage rate for the October 1990 survey week averaged $5.64 per hour, up 22 cents from a year earlier. Workers paid on an hourly basis earned $5.44 per hour compared with $5.23 In October 1989. Wage rates for field and livestock workers were $5.41 And $5.00, respectively. During October 1989, field workers made $5.22 while livestock workers averaged $4.76 per hour.

During the current survey week, self-employed persons worked an average of 40.0 hours, 2.5 fewer hours than in the comparable week in 1989. Unpaid workers, who worked 15 hours or more during the week, put in 37.5 hours compared with 40.2 hours a year earlier. Hired workers spent an average of 41.3 hours doing agricultural work, down one hour from October of last year.

Benefits, in addition to cash wages, such as housing and meals, were provided to 42 percent of the hired workers during the survey week both this year and last year. This year, 5 percent of the workers received both housing and meals, and another 14 percent received housing but no meals.

OCTOBER MILK PRODUCTION

Milk production in the 21 major states during October totaled 10.2 billion pounds, 4 percent above production in these same states in October 1989. September revised production, at 10.0 billion pounds, was 4 percent above September 1989.

Production per cow in the 21 major states averaged 1,199 pounds for October 38 pounds more than October 1989. The number of cows on farms in the 21 major states was 8.54 million head, 1 thousand more than September 1990 and 31 thousand head more than October 1989.

During the July-September period, the 21 major states produced 31.2 billion pounds of milk, 85 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 states, the U.S. production would be 12.0 billion pounds for October 1990.

OCTOBER EGG PRODUCTION UP 2 PERCENT

The nation's laying flocks produced 5.76 billion eggs during October 1990, up 2 percent from the 5.65 billion eggs produced a year ago. Production included 5.00 billion table eggs, 701 million broiler-type hatching eggs and 60.0 million egg-type hatching eggs. The average number of layers during October was 270 million, up slightly from the 268 million birds a year ago. The October 1990 egg production averaged 2,137 eggs per 100 layers, compared with 2,104 eggs per 100 layers in October 1989.

All layers in the U.S. on November 1, 1990 totaled 270 million, compared with 269 million a year ago. The 270 million layers consisted of 231 million layers producing table or commercial type eggs, 36.6 million layers producing broiler-type hatching eggs, and 2.67 million layers producing egg-type hatching eggs. Rate of lay per day on November 1, 1990 averaged 69.4 eggs per 100 layers, up 3 percent from last year's 67.7 eggs per 100 layers.

END-OF-YEAR SURVEYS UNDERWAY

The Montana Agricultural Statistics Service began contacting farmers and ranchers across the state in early November for final 1990 acreage, yield, and production totals and end-of-year livestock and poultry inventories.

Insects and variable weather conditions again this year have had an impact on Montana agriculture, and these surveys will help our office summarize where the industry stands at the end of 1990.

Information from these confidential surveys conducted by mail, telephone, or in person will also help producers make their plans for the coming year. Sound production and marketing decisions require good, reliable information and advanced planning. These reports provide producers with solid facts and figures they can incorporate into their plans.

These are sample surveys, so if you are contacted, it is important to provide the requested information, since one producers represents similar operations of the same type and size. Our estimates can be no better than the numbers producers provide.

MONTANA NOVEMBER 1 PASTURE & RANGE FEED CONDITION

Montana pasture and range feed condition on November 1, at 67 percent of normal, compares with 84 percent last year and the 5 year average of 68 percent. Drought in most of the eastern third of the state is mainly responsible for the decrease from a year ago. Grazing in Montana is being supplemented with crop and hay land residue.

MONTANA, November 1, 1990
Pasture & Range Feed Condition

U.S. MANUFACTURED DAIRY PRODUCTS

Butter production was 84.8 million pounds in September, 4 percent above September 1989 and 1 percent above August 1990.

American type cheese production totaled 221 million pounds, 8 percent above September 1989 but 4 percent below August 1990. Total cheese output (excluding cottage cheese) was 477 million pounds, 6 percent above September 1989 but 2 percent below August 1990.

Creamed cottage cheese production was 42.8 million pounds, 7 percent below September 1989 and 11 percent below August 1990. Lowfat cottage cheese production was 24.2 million pounds, 4 percent below September 1989 and 11 percent below August 1990.

Canned evaporated and condensed milk production at 46.9 million pounds, was 26 percent above last September but 8 percent below August 1990.

Frozen desserts: (compared with September 1989) ice cream (hard)--62.9 million gallons, down 1 percent. Ice milk--27.8 million gallons, down 14 percent. Sherbet (hard)--3.35 million gallons, down 12 percent.

1990 AVERAGE CROP YEAR

The 1990 crop season is about over--yields and Montana production were about average--except in the east where drought took it's toll.

A look at the moisture situation through October for the past three years provides some interesting comparisons. For example, accumulated moisture through October 1990 was above average in only 6 of the 43 reporting stations. A year ago, 23 stations were above average and in 1988--5 stations. It looks as if 1990 was more like 1988--when drought devastated crops and pastures.

A closer look by districts shows the western two-thirds of the state received less moisture in 1990 than in 1989, but remained above 1988 totals. Precipitation in the eastern third was also below 1989 totals and was only slightly better than in 1988.

This means good winter precipitation is urgently needed to rebuild soil moisture reserves to protect the 1991 winter wheat crop and rejuvenate pastures.

U.S. HIGHLIGHTS, NOVEMBER 1, 1990

U.S. weather was nearly ideal for winter wheat seedings early in October and favorable for growing wheat later in the month. Dry weather was prevalent early in the month, with favorable moisture later in the month. At the beginning of October, wheat planting was 60 percent complete, 2 points below the 5-year average. By month's end, wheat was in mostly good condition, with 91% of the crop planted, 1 point ahead of normal. Seventy-nine percent of the crop was emerged, 1 point ahead of normal.

U.S. corn production is forecast to be 7.93 billion bushels, down 1 percent from last month but 5 percent above the 1989 production. The U.S. average yield per acre is forecast at 119.0 bushels, down 1.3 bushels from last month but 2.8 bushels above the 1989 average yield.

Fall potato production for the U.S. is forecast at 342 million cwt this season, up 5 percent from last year and 9 percent above two years ago. Acreage for harvest is estimated at 1.15 million acres, up 6 percent from last year and 7 percent above 1988. The average yield is forecast at 298 cwt per acre, down 1 cwt from last year but 6 cwt above two years ago. Montana's fall potato production is forecast at 2.6 million cwt, up 16 percent from 1989.

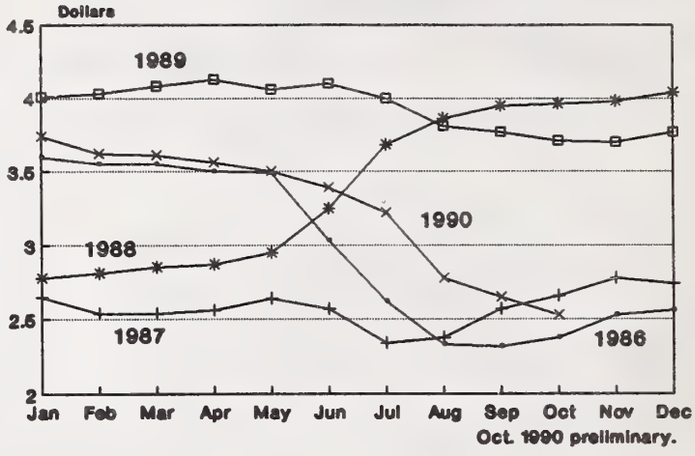
The sugar beet production forecast of 27.0 million tons is down fractionally from the October 1 forecast but 8 percent above last year's harvest. The increase from a year ago is the combination of higher yields and a 6 percent increase in acreage. Yields are expected to average 19.7 tons per acre, nationally, compared with 19.4 tons in 1989. Production is expected to be up in all states except California and Minnesota. Montana sugar beet production is forecast at 1.2 million tons, up 17 percent from last year. Yields are expected to average 22.0 tons per acre compared with 19.9 last season.

MONTANA ALL WHEAT, LAMB AND CALF PRICES

A look at prices over the past few years leads one to appreciate the difficulties of "topping the market." You may recall not so many years ago when a change of 5 cents over a year was normal. With worldwide markets and modern communications systems, markets react faster to many bits and pieces of information.

We charted monthly Montana wheat, lamb and calf prices from 1986 through October 1990. These are prices producers received a the point of first sale. The charts show since April 1990, calf prices moved to their highest levels in 5 years and, in fact, hit a record high in August. In contrast, lamb prices have dropped sharply since April and are at their lowest levels in 5 years. October 1990 wheat prices are averaging $2.53, near the 1986 and 1987 levels and sharply below the January-May levels. We have seen big swings in wheat prices during three of the past 5 years--1986, 1988, and 1990; 1987 and 1989 were relatively stable.

All Wheat Prices Received
By Montana Farmers 1986-1990



Lamb Prices Received

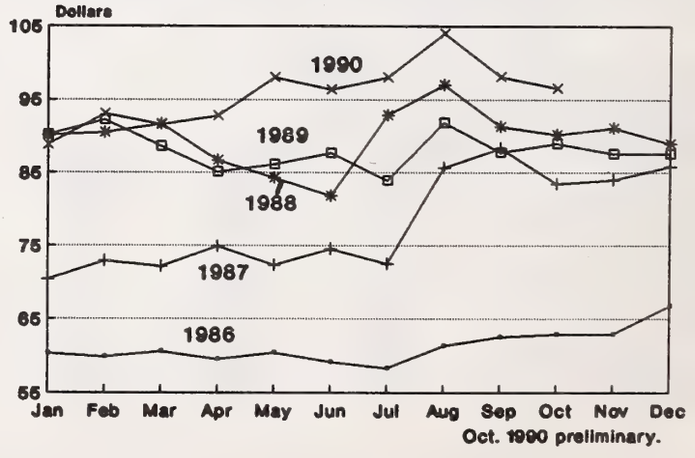
Calf Prices Received
By Montana Farmers 1986-1990



OCTOBER PRICES RECEIVED

Montana wheat prices were down in October compared with September, continuing a decline that started last December. The winter wheat mid-October price of $2.47 per bushel is the lowest since September 1987, and compares with $3.76 a bushel in October 1989. The mid-October barley price of $2.09 a bushel compares with $2.06 a year ago, but is down from the $2.46 peak reached two months ago.

Steer and heifer prices at $85.30 per cwt were up 10 cents from last month and a dollar above October 1989. Cow prices at $51.10 per cwt declined $1.80 from September but they are $4.90 above October 1989. Hog prices in October at $54.70 were well above both last month's $49.00, and last October's $42.20 prices.

The Montana index of prices received for all farm products in October at 168 (1977=100) compares with 171 in September and 182 in October 1989. The all crops index at 113 is down 5 points from September and down 39 points from a year ago. The livestock and products index at 218 is down 1 point from September but up 7 points from last year.

For the nation, the October all farm products index of prices received decreased 1 point from September to 147 percent of its January-December 1977 average. Decreases in the prices of broilers, milk, corn, and apples were partially offset by higher prices for hogs, tomatoes, strawberries and eggs.

Prices of most food and feed grains were down from September. Oats, rice, and durum wheat countered the trend with price increases. Soybean and sunflower prices decreased while peanut prices increased. The October all hog price increased moderately over September while the all cattle price was up slightly. The steer and heifer price was at a record high for October. Broiler prices decreased sharply from September due partially to large supplies and weaker seasonal demand.

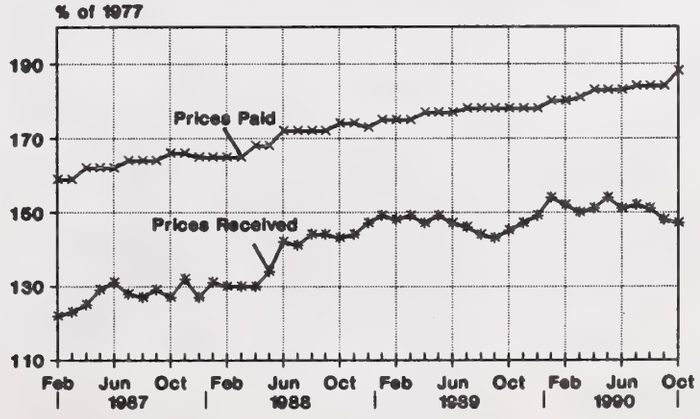
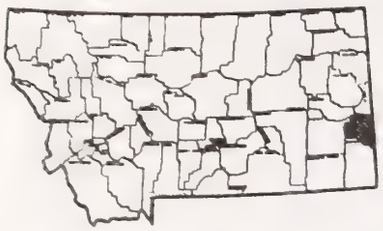
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



*featuring...*FALLON COUNTY



Fallon County occupies 1,038,630 acres of prairie land in eastern Montana along the Montana/North Dakota border. It was created December 9, 1913 and has an average annual precipitation of 13.21 inches, based on observations at Plevna, Montana, located near the center of Fallon County.

Dryland farming is the main interest in the county and a wide variety of crops are raised in the area. In 1989 crop production, Fallon County ranked 24th in oats production, 22nd in spring wheat, 26th in durum wheat, and 40th in winter wheat production. Barley, hay and corn are also grown in the area.

Cattle and hogs are the major livestock interests in the county. The January 1, 1989 cattle and calves inventory showed Fallon County ranked 31st and the December 1, 1988 hog inventory showed them at 24th place in the hog producing counties. Sheep are also raised in Fallon County and ranked 23rd in the January 1, 1989 inventory.

Cash receipts in 1988 for crops produced in the county came to $1,585,000. Livestock and livestock products receipts turned in $11,255,000, while government payments added $6,380,000 for a total cash return of $19,220,000 in 1988.

CATTLE ON FEED UP 10 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed October 1, 1990, for slaughter market in the 13 quarterly states totaled 9.10 million head, up 10 percent from October 1, 1989, and 3 percent above 1988.

The cattle on feed inventory included 5.92 million steers and steer calves, 13 percent above last year and 3 percent above 1988. This group represented 65 percent of the total October number on feed, compared to 63 percent last year and 65 percent in 1988. Heifers and heifer calves accounted for 3.14 million, 5 percent above last year and 2 percent above 1988.

Placements of cattle and calves on feed during the July-September 1990 quarter totaled 6.34 million, up 11 percent from 1989 and 5 percent above 1988. Other disappearance of 261 thousand head leaves net placements at 6.08 million.

Marketings of fed cattle for slaughter during July-Sept totaled 5.74 million, 3 percent below 1989 and 8 percent below the same period in 1988.

Cattle feeders expect to market 5.50 million head during the October-December quarter of 1990. This would be up 2 percent from the fourth quarter marketings in 1989 and 1 percent above 1988.

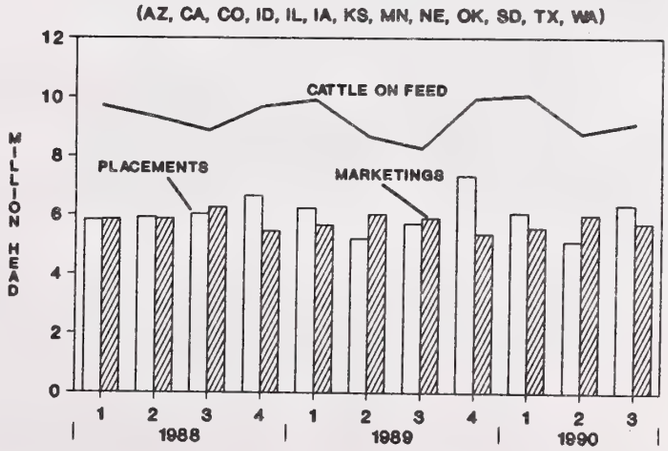
SEPTEMBER RED MEAT PRODUCTION

Montana slaughter plants produced 1.2 million pounds of red meat in September 1990. This production is down 29 percent from last month, but up 12 percent from last year. The number of cattle slaughtered, at 1,400 head, is up 200 head from a year ago. Average live weight of cattle slaughtered was 1,061 pounds, up 73 pounds from last year. Hog slaughter, at 2,000 head, was down 400 head from September 1989. Average live weight was 223 pounds, down 3 pounds from a year ago.

Commercial red meat production for the United States in September 1990, totaled 3.09 billion pounds, down 7 percent from last year. January-September red meat production, at 28.7 billion pounds was down 2 percent from last year. The percentage changes from 1990 accumulated production by individual components were: beef, down 1; veal, down 11; pork, down 4; lamb and mutton, up 6. Commercial red meat production includes slaughter in federally inspected and other plants, but excludes animals slaughtered on farms.

CATTLE ON FEED, PLACEMENTS, MARKETING BY QUARTERS FOR 13 STATES

(AZ, CA, CO, ID, IL, IA, KS, MN, NE, OK, SD, TX, WA)



NATION'S SEPTEMBER EGG PRODUCTION UP 2 PERCENT

The nation's laying flocks produced 5.53 billion eggs during September 1990, up 2 percent from the 5.44 billion produced a year ago. Production included 4.78 billion table eggs, 689 million broiler-type hatching eggs and 62.0 million egg-type hatching eggs. The average number of layers during September 1990 was 268 million, up fractionally from the 267 million birds a year ago. The September 1990 egg production averaged 2,062 eggs per 100 layers, compared with 2,037 eggs per 100 layers in September 1989.

All layers in the U.S. on October 1, 1990 totaled 269 million, compared with 267 million a year ago. The 269 million layers consisted of 228 million for table or commercial type eggs, 37.9 million for broiler-type hatching eggs and 2.87 million for egg-type hatching eggs. Rate of lay per day on October 1, 1990 averaged 68.5 eggs per 100 layers, up 1 percent from the 68.0 eggs per 100 layers on October 1, 1989, but down 1 percent from the 68.9 eggs per 100 layers on September 1, 1990.

JULY-SEPTEMBER MILK PRODUCTION

Milk cows on **Montana** farms produced 90 million pounds of milk in the July-September quarter of 1990. This production is up 6 percent from the comparable period in 1989. The average number of milk cows on farms for the quarter was 24,000 head, unchanged from a year ago. Milk production per cow averaged 3,740 pounds for the three months, up 5 percent from last year.

Montana dairymen fed 15 pounds of grain concentrates per cow on October 1, 1990, 3 percent more than a year ago. The value of grain and concentrates fed to milk cows was $6.95 per cwt, 15 cents more than last year.

The quarterly production of milk for the **U.S.** was 36.7 billion pounds, 4 percent above the July-September period last year. The average number of milk cows in the U.S. during the July-September quarter was 10.1 million head, 26 thousand head below the same period last year.

Grain and other concentrates fed to milk cows on October 1, 1990, averaged 17.1 pounds, 0.2 of a pound above October 1, 1989.

The value of grain and other concentrates fed to cows on October 1, averaged $8.04 per hundredweight, $0.04 below the October 1, 1989 price.

AMERICAN DIET CHANGES OVER 2 DECADES

If "you are what you eat," the consumer of the 1990s probably has broccoli sticking out of his or her ears and a pocketful of oat bran.

Diets have changed a lot in 20 years as health and dietary concerns become more important to consumers. That's changed the mix of food products purchased by consumers. Also, consumer income is generally higher and new food products (particularly convenience foods) have changed eating habits.

Looking at demographics, we have an aging population (which is consuming more cereals, bakery products, and beverages); smaller households, more two-earner households, more single-person households; and an increasing proportion of ethnic minorities in the U.S. population (whites, blacks, and others allocate their food dollar very differently), all of which affects food consumption. Some food consumption highlights:

**Meat, poultry, fish:* Last year, total consumption hit a record 187 pounds per person. Pork consumption averaged 44 pounds per person (boneless basis), about the same amount since 1970. At 65 pounds per capita, beef was down 24 pounds from the high of 89 pounds in 1976 when supplies were a record high. Americans consumed 70% more chicken last year than the early 1970's. Turkey consumption rose to 14.2 pounds, gaining an average of almost 10% annually between 1985 and 1990. Consumption of fish rose 4.2 pounds per person since 1971 to 15.7 pounds annually.

* *Eggs:* Back in 1971, the average American consumed 310 eggs. Last year, that number dropped to 235. However, consumption of eggs in the form of egg products rose from 36 eggs per capita in 1971 to 45 in 1989. That's because more food service establishments (fast food and others) are using eggs and food products with eggs like pasta and baked goods.

* *Dairy products:* Total fluid milk consumption has declined steadily from 271 pounds in 1971 to 229 pounds in 1988. That's mostly because whole milk consumption has dropped. Lowfat and skim milk, on the other hand, gained from 20% of all milk consumed to 54%. Cheese consumption has nearly doubled during the same period. Awareness of the need for calcium in the diet has been partly responsible for the recent upturn in consumption of dairy products.

* *Fresh fruits and vegetables:* In 1988, total per capita consumption of 9 major commercial fresh vegetables reached a record high. Americans ate more onions, lettuce, tomatoes, carrots, broccoli, asparagus, cauliflower, and celery. Fruit consumption totaled 94 pounds per person in 1988, 19 pounds per person in 1988, 19 more pounds than the 1971-73 average.

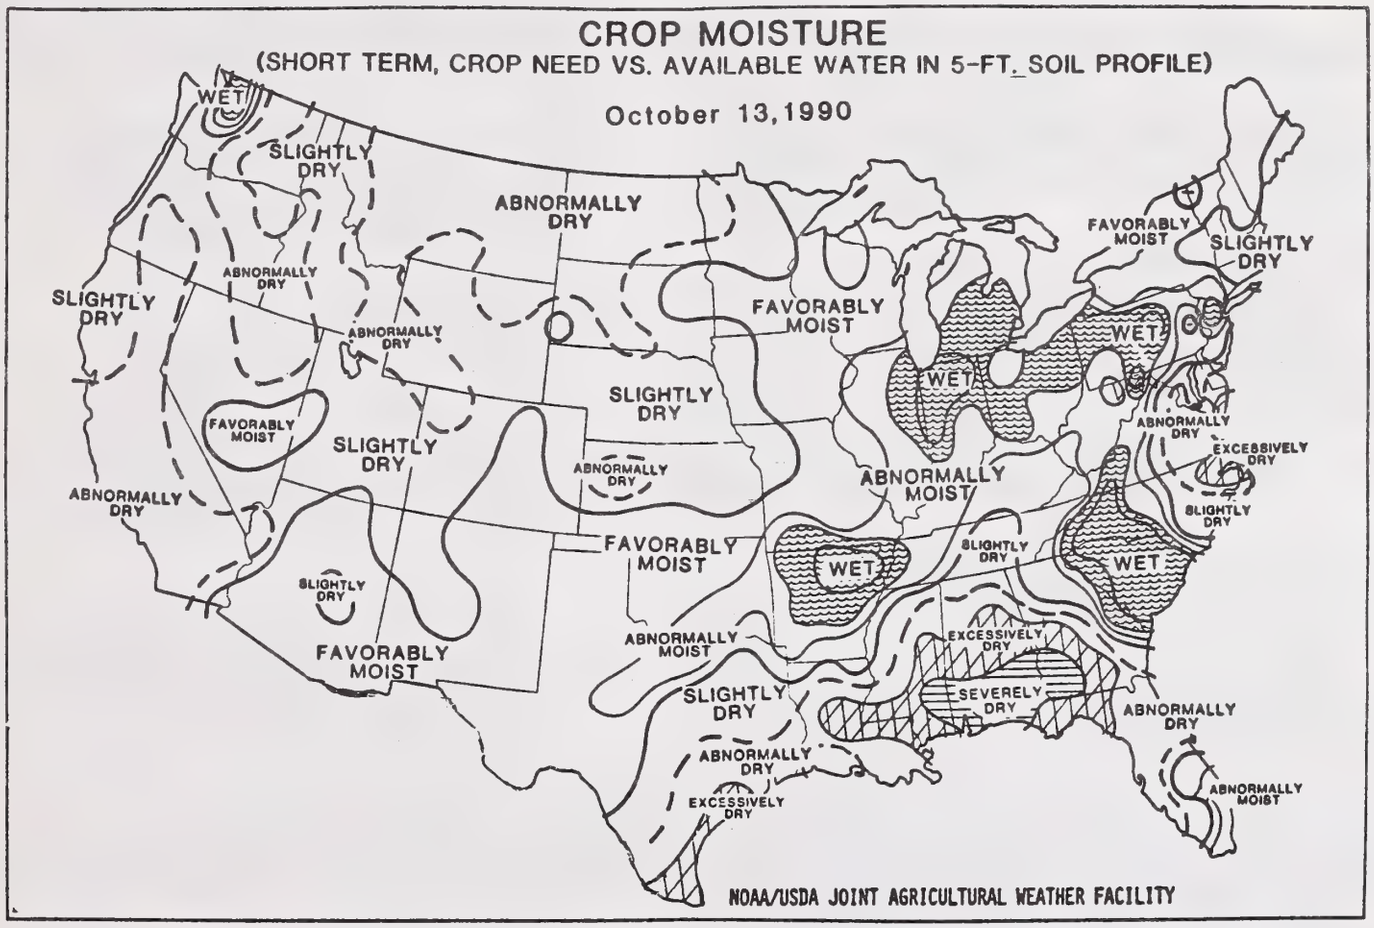
Convenience seems to be the trigger for many new food products. Developments in packaging, for example, have encouraged higher consumption of some dairy products. Consumers can now buy individually wrapped cheese slices, packaged shredded cheese, and frozen prepared dairy products like quiche.

MOISTURE SITUATION FOR MONTANA

This week's crop-weather report showed some improvement in the moisture situation. Some precipitation was reported in all divisions although coverage was spotty. Cooler temperatures kept soils from drying out and helped the winter wheat make optimum use of moisture.

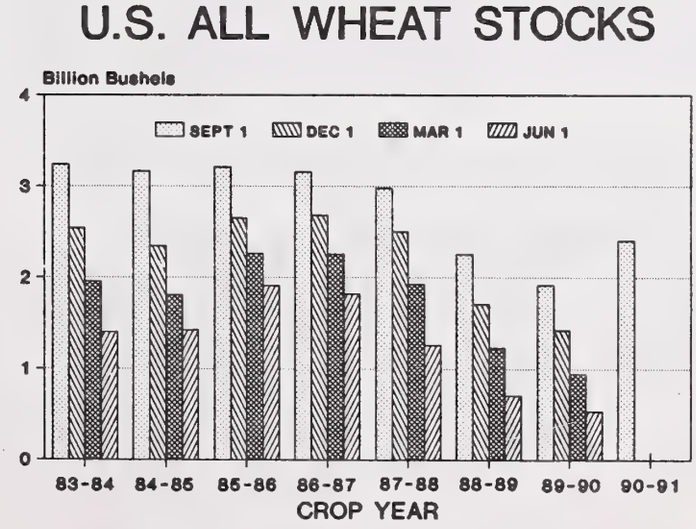
Seeding of winter wheat is virtually complete, ahead of normal for this date. Poor germination in some areas has resulted in poor to marginal stands; even so, emergence is about 80 percent--well ahead of the normal average of 65 percent. Condition is rated over 70 percent fair to poor. More moisture is the key to improvement. Dry bean, corn silage, and sugar beet harvest is about done. Potato harvest is nearing 90 percent completion.

The livestock situation shows pasture and range condition is mostly fair to good. Cattle and sheep are 2/3 to 3/4 moved from summer ranges--a little later than average. The forecast through October 29 calls for above normal temperatures and normal precipitation west, below normal east.



U.S. ALL WHEAT STOCKS

U.S. all wheat stored on September 1, 1990, is estimated at 2.40 billion bushels, up 25 percent from September 1, 1989. On-farm stocks total 995 million bushels, up 20 percent from a year ago. Off-farm stocks, at 1.41 billion bushels, are up 30 percent from last year. The indicated first quarter disappearance from all positions is 890 million bushels, up 9 percent from the same period in 1989.



featuring...*DEER LODGE COUNTY*

Deer Lodge County is located in western Montana and occupies approximately 473,734 acres. Most of the terrain is mountainous, being covered by parts of the Deer Lodge, and Beaverhead National Forests. A section of the Anaconda-Pintlar Wilderness lies along the western boundary. The Continental Divide makes up a portion of the eastern border of Deer Lodge County, cuts through the center, and runs along most of the western boundary. The Big Hole River defines the county's border to the south.

Because of the mountainous landscape, Deer Lodge County is, understandably not a large agricultural area. In spite of this, spring wheat, barley, oats, and hay, as well as some potatoes are all grown in the county. The major part of the cropland is irrigated. Cash receipts for crops in 1988 totaled $533,000.

Livestock interests include cattle, sheep, and hog raising. Receipts from the sale of livestock and livestock products came to $3,315,000 in 1988. Total cash receipts for Deer Lodge County in 1988 amounted to $4,046,000.

September 1 U.S. Hog Inventory

AUGUST U.S. MANUFACTURED DAIRY

U.S. butter production was 83.8 million pounds in August, 4 percent above August 1989 but 2 percent below July 1990.

American type cheese production totaled 229 million pounds, 9 percent above August 1989 but 3 percent below July 1990. Total cheese output (excluding cottage cheese) was 488 million pounds, 7 percent above August 1989 but 3 percent below July 1990. Creamed cottage cheese production was 48.1 million pounds, 8 percent below August 1989 but was 4 percent above July 1990. Lowfat cottage cheese production was 27.1 million pounds, 1 percent above August 1989 and 3 percent above July 1990.

Canned evaporated and condensed milk production at 50.8 million pounds was 23 percent above August 1989 and 3 percent above July 1990. Frozen desserts: (Comparisons with August 1989) Ice cream (hard)--76.5 million gallons, down 1 percent. Ice milk--37.1 millon gallons, down 6 percent. Sherbet (hard) 4.43 million gallons, down 6 percent.

WHEAT CROP DOWN FROM SEPTEMBER

Montana's 1990 all wheat crop was estimated on October 1 at 147.8 million bushels, 2.2 million bushels less than the September 1 estimate. The reduction is due to 250 thousand fewer spring wheat and 100 thousand fewer winter wheat acres harvested, but was partially offset by higher spring wheat and durum wheat yields.

Total winter wheat production is estimated at 87.5 million bushels, durum at 4 million, and hard spring wheat at 56.4 million. The per acre yield of winter wheat is 35 bushels, spring wheat is 23 bushels, and durum is 17. Both spring wheat and durum yield estimates increased from the previous estimate. Harvest data from the September Ag Survey was used to estimate the end of season acreage and production for Montana and U.S. small grains.

Barley production, at 55.8 million, is up 3.2 million bushels from earlier forecasts. The average barley yield was 39 bushels. Oats production, at 3.60 million bushels, is unchanged from September 1 and had an average yield of 45 bushels. Montana's hay production estimate of 5.2 million tons is 19 percent higher than the August forecast. The increase is due mainly to favorable late season growing and harvesting weather.

For the Nation, all wheat production for 1990 is estimated at 2.74 billion bushels, down slightly from the September 1 forecast but up 35 percent from 1989. Yields averaged a record high 39.6 bushels per acre, up 6.9 bushels per acre from a year ago. Area harvested, at 69.4 million acres, was up 12 percent from last year. The U.S. barley production is estimated at 419 million bushels, 4 percent above last year's crop of 404 million bushels. Average yield per acre, at 55.2 bushels, was up 6.6 bushels from the 1989 yield. The area harvested for grain is estimated at 7.59 million acres, 9 percent less than last year.

OCTOBER 1 PASTURE & RANGE FEED CONDITION

Montana's pasture and range feed condition, at 72% of normal on October 1, is 5 points lower than September 1, and 13 points under a year ago. Dry and unseasonally warm weather during September stopped grass growth and caused grasses to be brittle in the drier areas. Where previous grass growth was more lush the dry fall weather gave concern for fire. Regardless of the relatively low feed condition, ranges and pastures in much of Montana were still providing good grazing for livestock.

[1] Preliminary. [2] Planted for all purposes. [3] Production forecast available November 8, 1990.

SEPTEMBER PRICES RECEIVED

The September 1990 Index of Prices Received by Montana farmers and ranchers was down 6 points from the previous month and 3 points below last year's September index. The index was 178 percent of the January-December 1977 average.

The all crops index led the decline, falling off 9 points, and the livestock and products index was down 1 point. Compared with last year, the crops index is down 39 points, while the livestock and products index is up 31 points.

Mid-September individual commodity prices were down for all items except oats, beef cattle, and milk. Durum was down 56 cents; other spring wheat, down 43 cents; and winter wheat was 9 cents below August. These changes pulled the all wheat price down 25 cents from August and $1.24 below September 1989.

The mid-September barley price is 1 cent below August but is 24 cents above the previous year. Oats are up 1 cent from last month but 39 cents below September 1989. Steers and heifers were down slightly, cows down $1.00, and calves were down $2.00 per cwt from last month. Sheep fell off $3.70 and lambs $2.80 from the previous month.

The September all farm products index of prices received decreased 3 points from August to 148 percent of its January-December 1977 average. Decreases in corn, hogs, potatoes, and cattle prices more than offset higher prices for apples, tobacco, broilers, and eggs.

Milk prices were at a record high for September. After reaching record-high levels in August 1990, cattle prices were down slightly in September. September hog prices were off sharply from August. The 25 cents per bushel drop in the corn price from August to September was the largest month to month decrease since a 28 cent decline during the same two months in 1986. Wheat declined 10 cents in September after dropping 21 cents in August, 29 cents in July, and 32 cents in June.

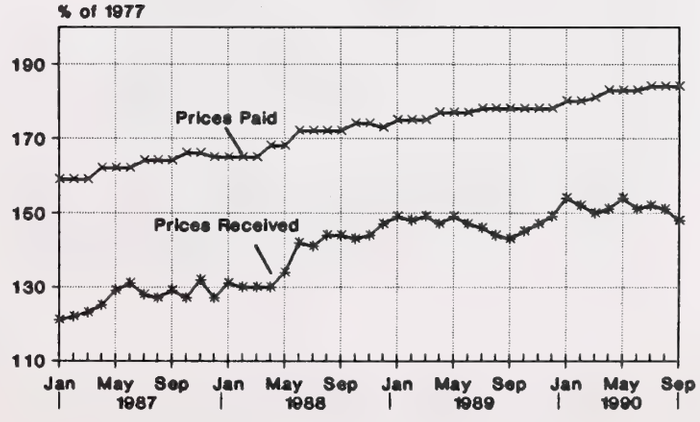
UNITED STATES INDEX NUMBERS OF PRICES PAID & PRICES RECEIVED



SEPTEMBER 1 U.S. HOG INVENTORY

Inventory of all hogs and pigs in the U.S. on September 1, 1990, is estimated at 56.3 million head. This estimate is 2 percent below September 1, 1989 but 4 percent above the June 1, 1990 inventory which was revised downward by 240 thousand head.

--- Breeding inventory at 6.86 million head is down slightly from September 1, 1989, and down 4 percent from June 1, 1990.

--- Market hog inventory at 49.4 million head is 3 percent below September 1, 1989, but 5 percent above June 1, 1990.

The June-August 1990 U.S. pig crop was 22.9 million head, 2 percent less than 1989. Sows farrowing during this period totaled 2.91 million head, 3 percent below a year earlier. Pigs saved per litter was 7.88 compared to 7.79 during the same period in 1989.

U.S. hog producers intend to have 2.85 million sows farrow during the September-November quarter, 2 percent more than the actual farrowings during the same period last year but 4 percent below 1988.

U.S. farrowing intentions for the December 1990-February 1991 quarter, at 2.63 million sows, is 2 percent above 1990 but down 3 percent from the 1989 period.

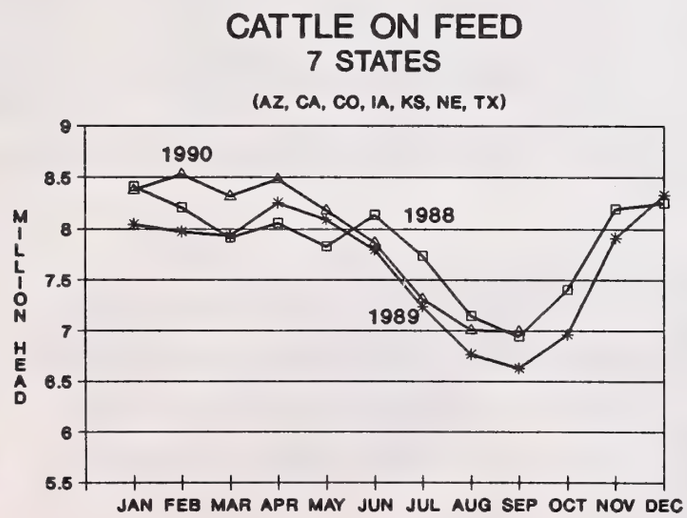
CATTLE ON FEED IN 7 STATES UP 5 PERCENT FROM LAST YEAR

Cattle and calves on feed September 1, 1990, for slaughter market in the 7 States preparing monthly estimates totaled 6.99 million head, up 5 percent from a year ago and 1 percent above September 1, 1988.

MARKETINGS of fed cattle during August totaled 1.67 million, down 2 percent from last year and 7 percent below two years ago. PLACEMENTS of cattle and calves on feed in the 7 States during August totaled 1.74 million, up 6 percent from last year and 5 percent above August 1988. NET PLACEMENTS of 1.65 million for August was 6 percent above last year and 4 percent above 1988.

OTHER DISAPPEARANCE totaled 82 thousand head compared to 76 thousand in August 1989 and 66 thousand in August 1988.



JUNE-AUGUST EGG PRODUCTION

Montana laying flocks produced 43 million eggs in the June-August quarter, 9 percent less than the same quarter last year. The number of layers for the quarter averaged 670,000 compared with 710,000 in 1989. The rate of lay in the 1990 quarter was 69.1 eggs per 100 layers compared with 71.3 eggs per 100 layers in the 1989 quarter.

The **Nation's** laying flocks produced 16.9 billion eggs during the June through August quarter, up 1 percent from the corresponding quarter a year ago. Production included 14.6 billion table eggs, 2.16 billion broiler-type hatching eggs, and 205 million egg-type hatching eggs. Layers for the quarter averaged 267 million, up slightly from the 266 million a year ago.

All layers in the U.S. on September 1, 1990 totaled 267 million, up slightly from a year ago. The 267 million layers consisted of 226 million layers producing table or commercial type eggs, 37.6 million layers producing broiler-type hatching eggs and 2.93 million layers producing egg-type hatching eggs. Rate of lay per day on September 1, 1990 averaged 68.9 eggs per 100 layers, compared with 67.7 eggs per 100 layers on September 1, 1989. Laying flocks in the 20 major egg production states produced 4.76 billion eggs during August, up 3 percent from the 4.64 billion produced a year ago. The number of layers during August averaged 222 million, up slightly from a year ago.

AUGUST RED MEAT PRODUCTION

Montana slaughter plants produced 1.7 million pounds of red meat in August 1990. This production is up 32 percent from last month, and up 4 percent from last year. The number of cattle slaughtered, at 2,000 head, is up 200 head from a year ago. Average live weight of cattle slaughtered was 1,077 pounds, up 26 pounds from last year. Hog slaughtered, at 2,600 head, is up 500 head from August 1989. Average live weight was 221 pounds, down 9 pounds from last year.

U.S. commercial red meat production in August 1990 totaled 3.43 billion pounds, down 2 percent from last year. January-August red meat production, at 25.6 billion pounds, was down 1 percent from last year. Percentage changes for 1990 accumulated production by individual components were: beef, down slightly; veal, down 11; pork, down 3; lamb and mutton, up 7. Commercial red meat production includes slaughter in Federally inspected and other plants, but excludes animals slaughtered on farms.

SEPTEMBER 1 GRAIN STOCKS

Montana's stocks of all wheat on September 1, 1990 totaled 162 million bushels, 7 percent less than a year ago. Stocks of wheat held on farms, at 140 million bushels, were down 7 percent, while off-farm stocks, at 22 million, were down 9 percent. Winter wheat stocks in all positions, at 93 million, were up 45 percent from last year. Hard spring wheat stocks, at 60 million, were down 41 percent, and durum stocks, at 9 million, were unchanged. Barley stored, in Montana on September 1, at 57 million bushels, was down 16 percent. There were 6.5 million bushels of oats in all storage positions on September 1.

Nationally, all wheat stored on September 1, 1990 is estimated at 2.40 billion bushels, up 25 percent from September 1, 1989. On-farm stocks total 995 million bushels, up 20 percent from a year ago. Off-farm stocks, at 1.41 billion bushels, are up 30 percent from last year. The indicated first quarter disappearance from all positions is 890 million bushels, up 9 percent from the same period in 1989. Durum wheat stocks on September 1, 1990, are 131 million bushels, up 8 percent from last year.

Farm stocks are placed at 99.8 million bushels, up 26 percent from September 1989. Barley stored in all positions on September 1, 1990, is estimated at 411 million bushels, down 1 percent from September 1, 1989. Of the total barley stocks on hand, 258 million are stored on farms, 2 percent above a year earlier. Off farm stocks, at 152 million, are 7 percent below last year. Oat stocks in all positions on September 1, 1990, totaled 353 million bushels. Of the total stocks, 236 million bushels are stored on farms.

AUGUST MILK PRODUCTION

Milk production in the 21 major states during August totaled 10.5 billion pounds, 4 percent above the production in these same states in August 1989. July revised production, at 10.7 billion pounds, was 5 percent above July 1989.

Production per cow in the 21 major states averaged 1,232 pounds for August, 48 pounds more than August 1989.

The number of cows on farms in the 21 major states was 8.53 million head, 19 thousand head more than August 1989 and 16 thousand head more than July 1990.

During the April-June period, the 21 major states produced 32.8 billion pounds of milk, 85.0 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 states , the U.S. production would be 12.4 billion pounds for August 1990.

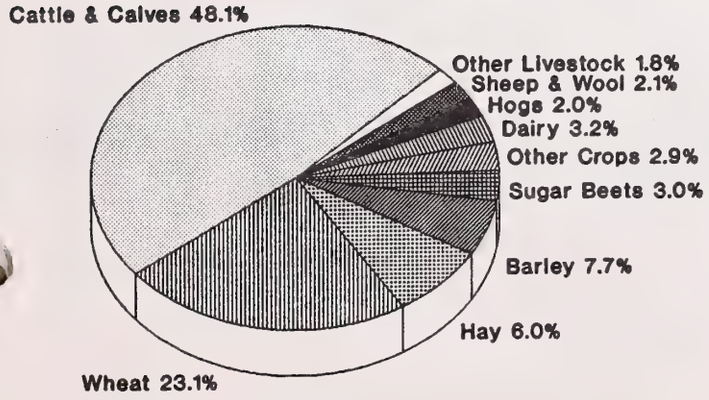
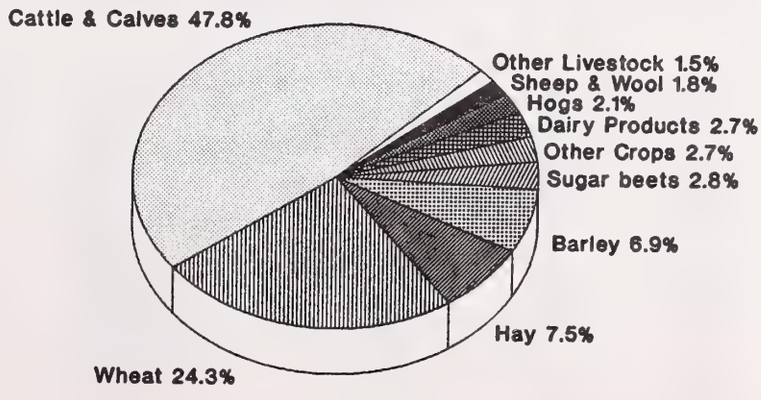
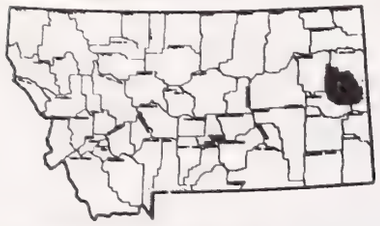
Cash Receipts 1985-88 Average



Cash Receipts 1989



featuring...*DAWSON COUNTY*



Dawson County occupies approximately 1,519,379 acres of land in east central Montana. The Yellowstone River flows through the southern half of the county. The land immediately adjacent to the river and its tributaries is hilly and broken, while a portion of the Big Sheep Mountain range is situated in the northwestern section.

Most of the acres for harvest in the county are non-irrigated. Crop production provides the largest share of cash receipts from the sale of agricultural products. The county ranked 15th for winter wheat, 16th for hard spring wheat, 17th for durum wheat, and 24th for oats production in 1988. Corn, sugar beets, and dry beans are also produced in this county.

Cattle, sheep, and hogs are raised in Dawson County. The January 1, 1988 livestock inventories shows the county ranking 31st and 38th in cattle and sheep numbers, respectively. Hog numbers for December 1987 put the county 32nd among the hog producing counties.

Cash receipts from the sale of crops totaled $13,144,000, and livestock receipts came to $10,108,000. Government payments added $7,935,000 for a total of $31,187,000 in cash receipts for Dawson County in 1988.

HIGHLIGHTS:

- U.S. Manufactured Dairy Products
- Crop Production Forecast
- Pasture & Range Feed Condition
- August Prices Received
- Grain Movement

JULY U.S. MANUFACTURED DAIRY

Butter production was 85.1 million pounds in July, 17 percent above July 1989 but 11 percent below June 1990.

American type cheese production totaled 236 million pounds, 7 percent above July 1989 but 6 percent below June 1990. Total cheese output (excluding cottage cheese) was 503 million pounds, 10 percent above July 1989 but 5 percent below June 1990. Creamed cottage cheese production was 46.3 million pounds 2 percent below July 1989 but 2 percent above June 1990. Lowfat cottage cheese production was 26.3 million pounds, 5 percent above July 1989 but 1 percent below June 1990.

Canned evaporated and condensed milk production at 49.3 million pounds was 18 percent above July 1989 but 8 percent below June 1990. Frozen desserts: (comparisons with July 1989) ice cream (hard)--83.6 million gallons, up 9 percent. Ice milk--36.4 million gallons, down 4 percent. Sherbet (hard)--5.25 million gallons, up 6 percent.

SEPTEMBER 1 CROP PRODUCTION

Montana's 1990 wheat crop was forecast on September 1 to be 150.0 million bushels, up 2 percent from the August 1 forecast and 4% larger than 1989. Winter wheat production is expected to be 91.0 million bushels with a yield of 35 bushels. Hard spring wheat production is forecast at 56.7 million bushels, up from 54.0 million bushels forecast last month but still way below 1989 production. The average yield for hard spring wheat is 21.0 bushels per harvested acre, one bushel higher than anticipated in August but still below 7 of the past 10 years. Producers in northeastern Montana were the most affected by summer's drought conditions and many fields were not cut for grain. Yields for grain crops are based upon the acreage harvested for grain and excludes acreages cut for hay, pastured, or abandoned. Durum wheat production, at 3.29 million bushels, was unchanged from August, but is down from 6.03 million bushels harvested last year. Barley in Montana is forecast at 52.5 million bushels, the same as the August estimate and 24 percent less than last year. Other crop estimates for Montana are: Oats, 4.2 million bushels, 37 percent less than last year; all hay, at 4.37 million tons, is down 2 percent from 1989; and sugar beets, at 1.1 million tons, is up 6 percent. Harvesting was right on schedule on September 1 with winter wheat harvest nearly completed and other small grains about 80 percent harvested. Harvest progress was interrupted by heavy rains in late August which caused some crop damage including sprouting of malting barley.

For the nation, all wheat production is forecast at 2.76 billion bushels, up 2 percent from August 1 and 35 percent more than the 1989 production. Average yield is forecast at 39.4 bushels per acre, equalling the record high of 1983, and 6.6 bushels per acre more than last year. Harvested area is still expected to total 69.9 million acres, up 12 percent from 1989. Durum wheat production is now forecast at 121 million bushels, up 12 percent from last month and up 31 percent from 1989. Other spring wheat production for 1990 is now forecast at a record 581 million bushels, 7 percent more than the August 1 forecast and 19 percent more than the 1989 production. Barley production is forecast at 409 million bushels, up 2 percent from last month and 1 percent above 1989. The expected yield per acre is forecast at 52.9 bushels.

SEPTEMBER 1 PASTURE & RANGE FEED CONDITION

Montana's pasture and range feed condition, at 77 percent of normal on September 1, is 2 points higher than August 1, but 12 points under a year ago. Good rains the last of August, together with warm days, greened ranges in many areas of Montana. Even though the eastern areas improved, they are still in the severe drought category. Condition in the rest of Montana is mostly good to excellent.

AUGUST PRICES RECEIVED

Montana grain prices fell in August to their lowest level since early 1988. The State's all wheat price during mid-August, at $2.79 per bushel, was down 43 cents from July, and $1.02 below August 1989. Barley, at $1.96 per bushel, was down 46 cents from a month earlier and 67 cents below last year.

Cattle prices in Montana continue at high levels. The mid-August calf price, at $99.00 per cwt, is a record high and compares with $91.80 for August 1989. Cows, at $54.40, are down slightly from July but are $5.90 above last year. Steers and heifers, at $81.60, are the highest since February and are $5.20 above last year.

Montana's August all farm products index, at 165, is down 2 points from July and is 11 points under a year ago, mainly due to falling grain prices. The all crops price index, at 119, compares with 138 in July and 160 last August. The livestock and products index, at 207, compares with 193 in July and 189 a year ago. The rise in the livestock index was tempered by lower prices for hogs.

Nationally, the August all farm products index of prices received decreased 2 points from July to 150 percent of its January-December 1977 average. Lower prices for hogs, grapefruit, and corn were partially offset by higher prices for cattle, eggs, and milk. The beef cattle price, at $75.40 per cwt, was a record high. The milk price was a record for August.

The all crops index was 126, down 3.1 percent from July and 1.6 percent below a year earlier. Wheat and feed grains were below the previous month. Soybeans were up from July.

The livestock and products index, at 174, was up 0.6 percent from July and increased 8.1 percent from August 1989. Compared with July, higher prices for beef cattle, calves, milk, and eggs more than offset lower prices for hogs and broilers.

MONTANA WHEAT AND BARLEY MOVEMENT

Montana **wheat** shipped to out-of-state destinations in December 1989-May 1990, at 57.2 million bushels, was 42 percent above the same period last year. Shipments to eastern destinations totaled 1.0 million bushels, 2.8 times more than last year. Movement to the west was up 41 percent, at 55.7 million bushels. Other destinations, mostly south and southeast of Montana, received .5 million bushels--up 9 percent from last year.

Rail movement amounted to 50.6 million bushels--88 percent of total shipments compared with 86 percent in the 1988-89 period.

Montana **barley** shipped to out-of-state destinations, December 1989-May 1990, was 21.9 million bushels, up 27 percent from the same period last year. Shipments to western destinations were up 77 percent and eastern destinations were down 30 percent. Barley hauled by rail was 91 percent of total movement, one percent more than the 1988-89 period.

JULY RED MEAT PRODUCTION

Montana slaughter plants produced 1.3 million pounds of red meat in July 1990. This production is 8 percent more than last month and 21 percent more than July 1989.

The number of cattle slaughtered, at 1,500 head, is up 200 head from last year. Average liveweight of cattle slaughtered was 1,094 pounds, up 156 pounds from a year ago. Hog slaughter at 2,100 head, was down 100 head from last year. Average liveweight was 228 pounds, down 5 pounds from last year.

Commercial red meat production for the United States in July 1990 totaled 3.10 billion pounds, up 2 percent from last year. January-July red meat production, at 22.2 billion pounds, was down 1 percent from last year. Percentage changes for 1990 accumulated production by individual components were: Beef, down slightly; veal, down 12; pork, down 3; lamb and mutton, up 8. Commercial red meat production includes slaughter in Federally inspected and other plants, but excludes animals slaughtered on farms.

7 STATE CATTLE ON FEED

Cattle and calves on feed August 1, 1990, for slaughter market in the 7 States preparing monthly estimates totaled 7.00 million head, up 4 percent from a year ago but 2 percent below August 1, 1988.

MARKETINGS of fed cattle during July totaled 1.75 million, up 3 percent from last year but 2 percent below two years ago.

PLACEMENTS of cattle and calves on feed in the 7 States during July totaled 1.52 million, up 18 percent from last year and 22 percent above July 1988. NET PLACEMENTS of 1.44 million for July were 18 percent above last year and 21 percent above 1988.

OTHER DISAPPEARANCE totaled 77 thousand head compared to 63 thousand in July 1989 and 62 thousand in July 1988.

NUMBER OF WORKERS DOWN, WAGE RATES INCREASE

There were 3.69 million people working on the Nation's farms and ranches during the week of July 8-14, 1990. This number was down 3 percent from the 3.80 million workers during the comparable week in 1989. Self-employed farm operators accounted for 1.62 million of the total, along with 605,000 unpaid workers, and 1.11 million workers hired directly by the farm operators. Agricultural service employees made up the remaining 356,000 workers.

Farm operators paid their workers an average rate of $5.30 per hour during the July 1990 survey week. This rate was up 7 cents from a year earlier. Workers paid an hourly wage earned $5.06 compared with $5.08 last July. Field workers received an average of $5.05 per hour, up 9 cents from the July 1989 week. Livestock workers earned $4.90 compared with $4.79 per hour a year earlier.

Self-employed operators worked an average of 40.7 hours, 1.0 hour less than the comparable week in 1989. Unpaid workers averaged 37.9 hours, 0.5 hour below last year. Hired employees worked 39.9 hours compared with 39.6 hours last July.

Benefits, such as housing and meals, were provided to 43 percent of the hired workers during the survey week. This compares with 45 percent during the July 1989 survey week. The Farm Costs and Returns Survey, conducted in February 1990, showed that the value of Social Security taxes, insurance, and retirement benefits was 12 percent of the $11.3 billion spent on farm labor during 1989. This compares with 12 percent of the $10.2 billion labor expenditure in 1988. In addition, workers received housing, food, transportation, and other non-cash benefits during 1989 valued at $468.7 million.

JULY EGG PRODUCTION UP 2 PERCENT

U.S. egg production totaled 5.72 billion during July 1990, up 2 percent from the 5.63 billion produced a year ago. Production included 4.93 billion for table eggs, 727 million for broiler-type hatching eggs, and 69 million for egg-type hatching eggs. The total number of layers during July averaged 266 million, up fractionally from a year ago. July egg production per 100 layers was 2,150 eggs, compared with 2,117 in July 1989.

All layers in the U.S. on August 1, 1990 totaled 267 million, up 1 percent from a year ago. The 267 million layers consisted of 226 million layers producing table or commercial type eggs, 37.7 million layers producing broiler-type hatching eggs, and 3.08 million layers producing egg-type hatching eggs. Rate of lay per day on August 1, 1990 averaged 69.5 eggs per 100 layers, up 2 percent from last year's 67.9 eggs per 100 layers.

Laying flocks in the 20 major egg production states produced 4.72 billion eggs during July, up 1 percent from the 4.66 billion produced a year ago. The number of layers during July averaged 220 million, down fractionally from a year ago.

Data for the 30 quarterly states were estimated based on the percent change in the 20 states conducting monthly surveys. These monthly states accounted for about 83 percent of the U.S. egg production during the 3-month period, March through May 1990.

JULY MILK PRODUCTION

Milk production in the 21 major States during July totaled 10.7 billion pounds, 5 percent above production in these same states in July 1989. June revised production, at 10.7 billion pounds, was 4 percent above June 1989.

Production per cow in the 21 major States averaged 1,258 pounds for July, 59 pounds more than July 1989. The number of cows on farms in the 21 major States was 8.51 million head, 4 thousand less than June 1990 but 17 thousand head more than July 1989.

During the April-June period, the 21 major states produced 32.8 billion pounds of milk, 85.0 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 12.6 billion pounds for July 1990.

WHEAT and BARLEY VARIETIES

Montana's wheat and barley varieties report was made possible with funds provided by the **Montana Wheat & Barley Committee** and the American Malting Barley Improvement Association, Inc. A more detailed varietal report may be obtained from our office upon request.

AUGUST 1 PASTURE & RANGE FEED CONDITION

Montana's pasture and range feed condition on August 1, at 75 percent of normal, was down 8 points (10 percent) from a month earlier. This was 13 points under last year. Hot and dry weather during July was hard on ranges and except for high elevation pastures, grass growth deteriorated. Where grass growth had been lush earlier, fire danger became a major concern.

AUGUST 1 CROP PRODUCTION FORECAST

Montana's all wheat August 1 forecast is 148.3 million bushels, down 2 percent from the July estimate. Hot and dry weather conditions along with some hail damage reduced winter wheat production to 91.0 million bushels, down 3 percent from the July estimate. Spring wheat, however, remains unchanged at 54.0 million bushels. Forecast durum wheat production is holding steady from the July 1 estimate at 3.29 million bushels. The state's all wheat crop forecast is up 2 percent from last year's final production figures. Yield prospects on August 1 were 35 bushels for winter wheat, 20 bushels for spring wheat, and 14 bushels for durum wheat.

The state's barley crop is forecast at 52.5 million bushels, unchanged from July 1. Barley yield is estimated to be 35 bushels per acre. Oats production is forecast at 4.2 million bushels, down 2 percent from last month. Hay production in Montana, at 4.37 million tons, is down 2 percent from last year. Alfalfa hay is forecast at 2.9 million tons, while other hay is estimated to be 1.47 million tons.

United States all wheat production is forecast at 2.71 billion bushels, up 33 percent from 1989 and up fractionally from July 1. Average yield is 38.7 bushels per acre, 0.1 of a bushel higher than July 1 and 5.9 bushels more than last year.

Winter wheat production is forecast at 2.05 billion bushels, up 41 percent from 1989 and up 1 percent from July 1. Durum wheat production is now forecast at 108 million bushels, up 17 percent from 1989 but down 7 percent from the July 1 forecast. Other spring wheat production for 1990 is now forecast at 543 million bushels, down 1 percent from July 1 but up 11 percent from 1989.

Barley production is forecast at 403 million bushels, down 3 percent from last month, but virtually unchanged from the 1989 crop. The expected yield per acre is forecast at 52.0 bushels, compared with last season's 48.6 bushels. Area harvested and to be harvested, at 7.75 million acres, is 7 percent below last year's 8.30 million acres. Yields in Minnesota and North Dakota are up 5 and 11 bushels, respectively, from last year.

All hay production, at 148 million tons, is up 2 percent from 1989. Higher yields, partially offset by lower acreage, have resulted in the larger hay crop.

JULY AGRICULTURAL PRICES RECEIVED BY FARMERS

The July index of prices received by **Montana** farmers and ranchers was down 5 points from the previous month. The index was 3 points below a year ago, at 162 percent of its January-December 1977 average.

The all crops index dropped 16 points from June and is 36 points below the July 1989 index. Winter wheat led the month to month decline, falling off 56 cents per bushel; durum was down 42 cents; other spring wheat, down 36 cents; barley, down 28 cents and oats, off 8 cents. Alfalfa hay was up $1.00 per ton from June and averaged $68.00--the same as July 1989.

The livestock and products index only partially offset the crops decline as advancing livestock prices pushed the livestock index up 6 points over June. Mid-July cow prices were up $1.30 per cwt, calves were up $2.40, sheep were up $.30 per cwt, and milk was up $.85 per cwt.

Steer and heifer prices were down $.20 per cwt but were still $5.90 per cwt above a year ago. Lambs were down $1.60 from June and down $7.40 from last years July level. Hogs were down $.10 from June but $20.60 above July last year. Eggs were down 7 cents per dozen and 15 cents below a year ago.

The July all farm products index of prices received by **U.S.** farmers was unchanged from June, at 151 percent of its January-December 1977 average. Lettuce, apples, and milk increased in price while cattle, wheat, and eggs were lower. The index was 4 points above a year ago. Higher hog, cattle, and milk prices contributed to the increase over a year earlier while wheat, soybeans, and potatoes were lower.

The July index of prices paid for commodities and services, interest, taxes, and farm wage rates was 184 percent of its 1977 average. The index was 1 point above April of this year and 6 points above July 1989. Since surveyed in April, higher prices for feeder cattle and calves, corn and commercial feeds, and gasoline were partially offset by lower prices for feeder pigs, diesel fuel, alfalfa hay, and building materials.

JUNE U.S. MANUFACTURED DAIRY PRODUCTS

Butter production was 95.9 million pounds in June, 1 percent below June 1989 and 20 percent below May 1990. American-type cheese production totaled 253 million pounds, 8 percent above June 1989 but 5 percent below May 1990.

Total cheese output (excluding cottage cheese) was 529 million pounds, 9 percent above June 1989 but 3 percent below May 1990.

Creamed cottage cheese production was 45.4 million pounds, 11 percent below June 1989 and 9 percent below May 1990.

Lowfat cottage cheese production was 26.6 million pounds, virtually unchanged from June 1989 but 5 percent below May 1990.

Canned evaporated and condensed milk production, at 53.7 million pounds, was 3 percent above June 1989 and 7 percent above May 1990.

Frozen desserts: (comparisons with June 1989)
Ice cream (hard)--78.4 million gallons, down 3 percent.
Ice milk--35.8 million gallons, down 13 percent.
Sherbet (hard)--4.81 million gallons, down 14 percent.

U.S. CATTLE INVENTORY UNCHANGED

All cattle and calves in the **United States** as of July 1, 1990, totaled 108.9 million head, virtually unchanged from the July 1 level of both a year ago and two years ago. This is the second consecutive year that the inventory level has shown a small increase in number.

All cows and heifers that have calved, at 44.4 million, were up fractionally from 44.3 million on both July 1, 1989, and two years ago.

- Beef cows, at 34.3 million, were up slightly from July 1, 1989, and 1 percent above July 1988.
- Milk cows, at 10.1 million, were unchanged from July 1, 1989, but 1 percent below two years ago.

Other class estimates on July 1, 1990, and the changes from July 1 last year and two years ago, respectively, are as follows:

- All heifers 500 pounds and over, 16.8 million, up 1 percent and 2 percent.
- Beef replacement heifers, 5.20 million, up 4 percent and 8 percent.
- Milk replacement heifers, 4.30 million, down 4 percent and 2 percent.
- Other heifers, 7.30 million, up 1 percent and unchanged.
- Steers weighing 500 pounds and over, 14.7 million, up 1 percent from both years.
- Bulls weighing 500 pounds and over, 2.20 million, unchanged from both years.
- Calves under 500 pounds, 30.8 million, down fractionally and 1 percent.

U.S. CALF CROP DOWN FRACTIONALLY

The 1990 calf crop is expected to be 40.0 million, down fractionally from 1989 and 1 percent below 1988. Calves born during the first half of the year are estimated at 28.9 million, down 1 percent from a year ago and 1988.

CATTLE & CALVES: NUMBER BY CLASS & CALF CROP, UNITED STATES, JULY 1, 1988-90

CLASS	1988	1989	1990	1990 AS % 1989
		1,000 Head		Percent
Cattle and Calves	108,500	108,600	108,900	100

CATTLE ON FEED UP 1 PERCENT IN 13 QUARTERLY STATES

Cattle and calves on feed July 1, 1990, for slaughter market in the 13 quarterly states totaled 8.76 million head, up 1 percent from July 1, 1989, but 6 percent below 1988.

The cattle on feed inventory included 5.63 million steers and steer calves, 3 percent above last year but 6 percent below 1988. This group represented 64 percent of the total July number on feed, compared to 63 percent last year and 64 percent in 1988. Heifers and heifer calves accounted for 3.09 million, 3 percent below last year and 6 percent below 1988.

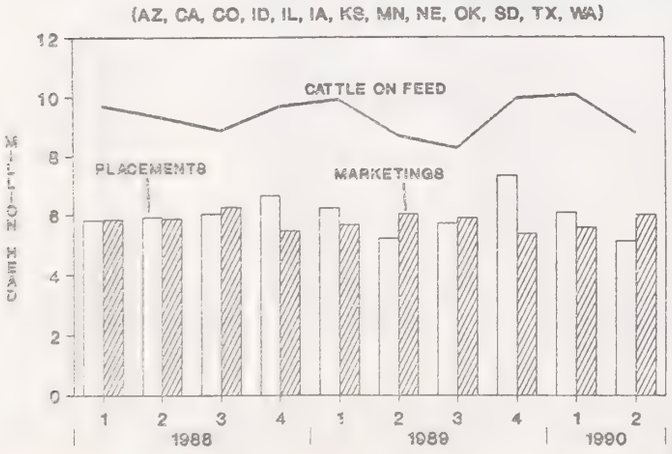
Placements of cattle and calves on feed during the April-June 1990 quarter totaled 5.11 million, down 2 percent from 1989 and 14 percent below 1988. This is the lowest April-June placement total since 1975. Other disappearance of 400 thousand head leaves net placements at 4.71 million.

Marketings of fed cattle for slaughter during April-June totaled 6.01 million, slightly below 1989 but 2 percent above the same period in 1988.

EXPECTED MARKETINGS FOR JULY-SEPTEMBER UP SLIGHTLY

Cattle feeders expect to market 5.91 million head during the July-September quarter of 1990. This would be up fractionally from the third quarter marketings in 1989 but 6 percent below 1988.

CATTLE ON FEED, PLACEMENTS, MARKETING
BY QUARTERS FOR 13 STATES
(AZ, CA, CO, ID, IL, IA, KS, MN, NE, OK, SD, TX, WA)



JUNE RED MEAT PRODUCTION

Montana slaughter plants produced 1.2 million pounds of red meat in June 1990. This production is down 9 percent from last month and down 5 percent from June 1989.

The number of cattle slaughtered, at 1,500, is down 100 head from last year. Average liveweight of cattle slaughtered was 1,079 pounds, up slightly from a year ago. Hog slaughter, at 1,600 head, was down 600 head from last year. Average liveweight was 239 pounds, up 3 percent from last year.

Commercial red meat production for the **United States** in June 1990 totaled 3.17 billion pounds, down 5 percent from last year. January-June red meat production, at 19.1 billion pounds, was down 2 percent from last year. Percentage changes for 1990 accumulated production by individual components were: beef, down 1; veal, down 13; pork, down 3; lamb and mutton, up 8. Commercial red meat production includes slaughter in Federally inspected and other plants, but excludes animals slaughter on farms.

APRIL-JUNE MILK PRODUCTION

Milk cows on **Montana** farms produced 86 million pounds of milk in the April-June quarter of 1990. This production is up 2 percent from the comparable period in 1989. The number of milk cows on farms for the quarter was 24,000 head, unchanged from a year ago. Milk production per cow averaged 3,600 pounds for the three months, up 3 percent from last year.

Montana dairymen fed 15 pounds of grain concentrates per milk cow daily for the quarter, up a half pound from the same quarter last year. The value of grain and concentrates fed to milk cows was $7.00 per cwt, down 40 cents from last year.

The quarterly production of milk for the **U.S.** was 38.5 billion pounds, 2 percent above the April-June period last year. The average number of milk cows in the U.S. during the April-June quarter was 10.1 million head, 8 thousand head above the same period last year.

Grain and other concentrates fed to milk cows on July 1, 1990, averaged 17.3 pounds, 0.2 pound above July 1, 1989.

The value of grain and other concentrates fed to cows on July 1 averaged $8.11 per cwt, $0.11 below the July 1, 1989 price.

MONTANA FARM NUMBERS UNCHANGED--U.S. DOWN 1 PERCENT

The number of **Montana** farms, at 24,700, remained unchanged from 1989. This discontinues a trend of slightly increased numbers of farms that began in 1975. Montana has 60.5 million acres in farms and ranches in 1990, down from 60.6 million in 1989. The average size of operation declined slightly to 2,449 acres, down from 2,453 acres last year.

The number of farms in the **United States** in 1990 is estimated at 2.14 million, down 1 percent from 1989. Total land in farms is 988 million acres, fractionally below last year. Since the number of farms has declined faster than land in farms, the average farm size increased from 457 acres in 1989 to 461.

	MONTANA			UNITED STATES		
Year	Number of Farms	All Land in Farms	Average size of Farms	Number of Farms	All Land in Farms	Average size of Farms
	Thousands	Million Acres	Acres	Thousands	Million Acres	Acres
1983	24.1	61.3	2,544	2,378.6	1,023.4	430
1984	24.2	61.1	2,525	2,333.8	1,017.8	436
1985	24.3	61.0	2,510	2,292.5	1,012.1	441
1986	24.4	60.9	2,496	2,249.8	1,005.3	447
1987	24.5	60.8	2,482	2,213.0	998.9	451
1988	24.6	60.7	2,467	2,197.1	994.5	453
1989	24.7	60.6	2,453	2,170.5	991.2	457
1990	24.7	60.5	2,449	2,173.2	987.7	461

MINK PELT PRODUCTION UP 3 PERCENT

Mink pelt production in the United States in 1989 totaled 4.60 million pelts, up 3 percent from 1988. Wisconsin, the major mink producing state, produced 1.16 million pelts.

By color class, the number of pelts as a percent of the total U.S. production was: standard--46 percent; ranch wild--12.7 percent; mahogany--11.5 percent; demi-buff--9.6 percent; and gunmetal--6.8 percent. The remaining color classes accounted for 13.4 percent.

Mink pelts sold during the 1989 crop year were valued at $118.7 million dollars, down 17 percent from 143.8 million a year ago. The average price per pelt for the 1989 crop year was $25.80, compared with $32.30 in 1988 and $43.00 in 1987.

Female mink bred to produce kits in 1990 totaled 921 thousand, down 23 percent from 1989. Many mink producers reported the low mink price motivated them to "pelt out" and reduce or close out their mink operation.

Percent of total females bred to produce kits in 1990 by color class are: standard--54.7 percent; ranch wild--10.5 percent; demi-buff--7.9 percent; gunmetal--7.8 percent; and mahogany--5.6 percent. The remaining color classes accounted for 13.5 percent.

There were 952 mink farms producing pelts in 1989, down 7 percent from a year ago. Leading states were Wisconsin with 204 farms, Utah with 175 farms, and Minnesota with 119.

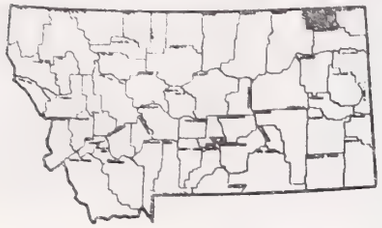
JUNE U.S. EGG PRODUCTION UP 1 PERCENT

U.S. egg production totaled 5.54 billion during June 1990, up 1 percent from the 5.49 billion produced a year ago. Production included 4.76 billion for table eggs, 710 million for broiler-type hatching eggs, and 69.0 million for egg-type hatching eggs. The total number of layers during June averaged 267 million, up fractionally from a year ago. June egg production per 100 layers was 2,072 eggs, compared with 2,059 in June 1989.

All layers in the U.S. on July 1, 1990 totaled 266 million, down fractionally from a year ago. The 266 million layers consisted of 225 million layers producing table or commercial type eggs, 37.9 million layers producing broiler-type hatching eggs, and 3.13 million layers producing egg-type hatching eggs. Rate of lay per day on July 1, 1990 averaged 69.2 eggs per 100 layers, up 1 percent from last years 68.5 eggs per 100 layers.

Laying flocks in the 20 major egg production states produced 4.57 billion eggs during June, up 1 percent from the 4.54 billion produced a year ago. The number of layers during June averaged 221 million, down fractionally from a year ago.

featuring...*DANIELS COUNTY*



Daniels County is situated in the northeastern corner of Montana, bordered on the south by the Fort Peck Indian Reservation and to the north by Canada. It was created in May of 1920 and covers approximately 913,216 acres of land. The land is characterized mainly by rolling prairie. The Poplar River, which eventually empties into the Missouri River, cuts through the middle of the county. The West Fork of the Poplar River crosses the southwestern corner of the county. Scobey is the county seat.

Daniels County has become a major spring and durum wheat producing area, ranking 6th for both crops in 1988 production. Other crops grown include barley and oats, along with some winter wheat and hay. Livestock raising is also a major part of the agricultural industry in Daniels County as it ranked 19th in hog numbers in the December 1, 1987 hog inventory. Sheep and cattle are also raised in the area.

Wheat and other crops produced in Daniels County brought in $10,392,000 in 1987 cash receipts. Livestock returned $4,479,000 the same year, while government payments added $11,176,000. The total cash return for Daniels County in 1987 was $26,047,000.

JULY 1 CROP PRODUCTION FORECAST

Montana's all wheat crop was forecast at 150.9 million bushels on July 1, the sixth largest crop on record and up 4 percent from last year. This production level forecast is based on conditions as of July 1 and does not reflect conditions which have occurred since the first of the month in the major wheat growing areas.

A projected 73 percent increase in winter wheat harvested acreage resulted in the higher wheat crop production. By class, winter wheat production is forecast at 93.6 million bushels, up 73 percent from last year. Spring wheat production is estimated at 54.0 million bushels, down 36 percent from last year. Durum wheat production is estimated at 3.29 million bushels, down 45 percent from last year. Yield prospects on July 1 were 36 bushels per acre for winter wheat, 20 bushels for hard spring wheat, and 14 bushels for durum wheat.

Barley, second only to wheat as the State's most important crop, is forecast to be 52.5 million bushels, down 24 percent from last year. Barley yield is estimated to be 35 bushels to the acre. Oats production is forecast at 4.3 million bushels, 35 percent less than last year. Acres of hay for harvest, at 2.5 million acres, are up 6 percent from last year.

Winter wheat production for the **U.S.** is forecast as of July 1, at 2.04 billion bushels, up 40 percent from 1989. Yields are expected to average 40.6 bushels per acre, up 5.5 bushels from last year.

Other spring wheat production is forecast at 549 million bushels, up 12 percent from 1989. If realized, this would be a record high production. Yields are forecast at 33.5 bushels per acre. This is 4.7 bushels per acre higher than last season's average yield.

Barley production is forecast at 414 million bushels. This is 3 percent above the 1989 production of 403 million bushels. Yields are expected to average 53.5 bushels per acre, 4.9 bushels more than last year.

Oat production is forecast at 375 million bushels, virtually the same as the 374 million bushels harvested last season. The expected yield per acre is forecast at 60.1 bushels compared with last season's average of 54.4 bushels.
(Tables on inside and back)

JULY 1 PASTURE & RANGE FEED CONDITION

Montana's pasture and range feed condition was rated good to excellent (83 percent of normal) on July 1. This is a slight decrease from June 1. However, in the northeast district condition was rated severe drought. Compared with a year earlier, condition was down 11 points and reflect the dry condtions in the eastern part of the state. Cool and wet weather during most of June was conducive to good grass growth on pastures and ranges.

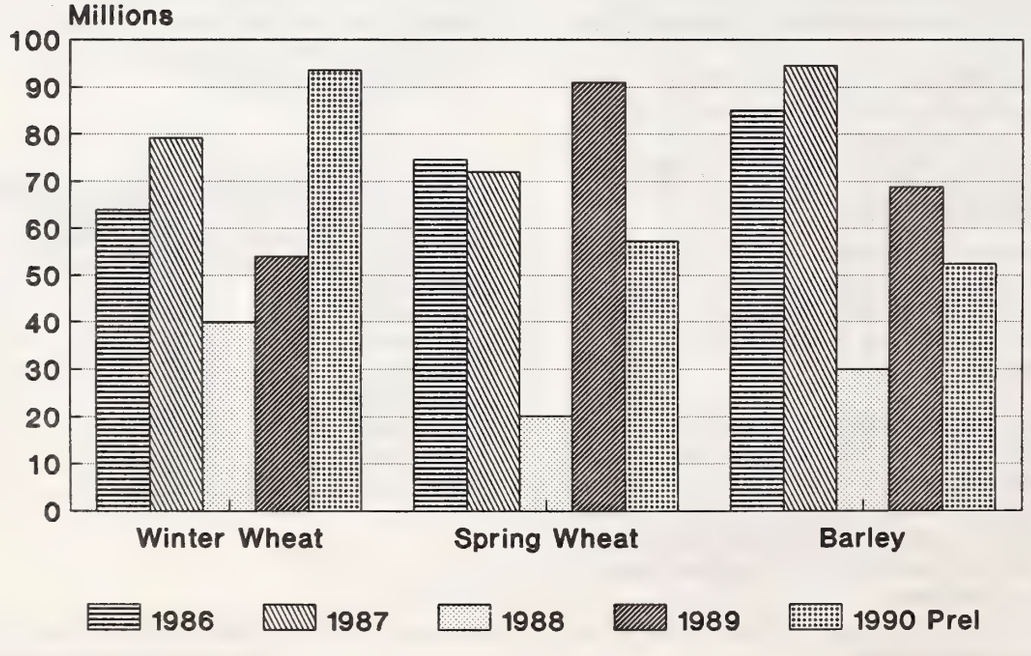
Montana Small Grains Production
July 1, 1990



JUNE AG PRICES RECEIVED

Montana wheat prices have continued a downward trend which started last December. The mid-June all wheat price of $3.32 per bushel is 78 cents under June 1989. Montana farmers also received less for barley in June than a year ago--$2.22 per bushel compared with $2.41.

Livestock prices in Montana are mostly above last year's level. All beef cattle in June, at $63.00 per cwt, are $7.90 above last year and hogs, at $58.10 per cwt, are $21.30 higher than June 1989. Sheep, lambs, and wool are all down in price.

The Montana June index of prices received by farmers for all farm products was 168 percent of the 1977=100 base, down 2 points from last year. The all crops index was 140 compared with 170 a year ago, while the livestock and products index at 194 compares with 170 last year.

Nationally, the June all farm products index of prices received decreased 2 points from May to 152 percent of its January-December 1977 average. Decreases in the prices of oranges, wheat, hay, and soybeans were partially offset by higher prices for tomatoes, corn, eggs, and grapefruit.

Cattle, calf, hog, and lamb prices were lower than a month earlier but eggs and milk were higher. Wheat, oilseeds, and barley were lower while corn and sorghum increased in price from May.

The index was 4 points above a year ago. Higher hog, cattle, milk, and grapefruit prices were the major contributors to the increase over 1989. Soybeans, wheat, oranges, and broilers were lower.

MAY U.S. MANUFACTURED DAIRY

U.S. Butter production was 120 million pounds in May, 1 percent below May 1989 but was unchanged from April 1990. American type cheese production totaled 265 million pounds, 7 percent above May 1989 and 6 percent above April 1990.

Total cheese output (excluding cottage cheese) was 545 million pounds, 9 percent above May 1989 and 6 percent above April 1990. Creamed cottage cheese production was 50.1 million pounds, 2 percent below May 1989 but was 12 percent above April 1990. Lowfat cottage cheese production was 28.1 million pounds, 3 percent above May 1989 and 10 percent above April 1990.

Canned evaporated and condensed milk production at 50.3 million pounds was 5 percent below May 1989 but 7 percent above April 1990.

Frozen desserts: (comparisons with May 1989) Ice cream (hard)--74.6 million gallons, down 2 percent. Ice milk--34.9 million gallons, down 9 percent. Sherbet (hard)--4.79 million gallons, down 7 percent.

HIGHLIGHTS:

1990 Crop Acreages
Cattle on Feed
Grain Stocks
Milk Production
Quarterly Egg Production
May Red Meat Production

The Montana crop acreage and grain stocks estimates in this issue of the Reporter are the result of surveying approximately 2,200 Montana farmers and ranchers during June. Names were selected on a statistical probability basis. For those operators that were interviewed and responded to the survey a SPECIAL THANKS. Only by your voluntary cooperation can those involved in agriculture be served with accurate, reliable statistics.

1990 CROP ACREAGES

Montana farmers intend to harvest the largest winter wheat acreage since 1978. **Winter wheat** acres to be harvested are forecast at 2.6 million acres, up 73 percent from last year when severe winter kill reduced the crop. Farmers planted 2.8 million acres of **spring wheat**, down 20 percent from last year but up 40 percent from two years ago. **Durum wheat** planted acreage came in at 245,000 acres, down 28 percent from last year. Montana farmers planted 1.6 million acres of **barley**, down 6 percent from last year. **Oats** planted, at 160,000 acres, is down 36 percent from last year.

U.S. all wheat seeded area for 1990 is estimated at 77.3 million acres, up 1 percent from 1989. Area for grain is expected to total 70.0 million acres, up 13 percent from last year. This would be the largest harvested acreage since 1982. Winter wheat area planted for 1990 is estimated at 57.0 million acres, up 4 percent from 1989. Acreage for grain is expected to total 50.1 million acres, up 21 percent from a year ago, but off 1 percent from the June 1 forecast. Durum wheat seeded acreage for 1990 is estimated at 3.57 million acres, down 6 percent from 1989. Acres for grain is placed at 3.50 million acres, off 5 percent from last year. Area for harvest is down sharply in Arizona, California, Montana and South Dakota, being off 48, 46, 30, and 29 percent, respectively. Harvested area is up 50 thousand acres in North Dakota and is unchanged in Minnesota from 1989. Other spring wheat growers have seeded 16.7 million acres for 1990, down 6 percent from 1989. Plans are to harvest 16.4 million acres for grain, down 4 percent.

CATTLE ON FEED IN 7 STATES UP 1 PERCENT

Cattle and calves on feed June 1, 1990, for slaughter market in the 7 States preparing monthly estimates totaled 7.87 million head, up 1 percent from a year ago but 3 percent below June 1, 1988. MARKETINGS of fed cattle during May totaled 1.80 million, up 3 percent from last year and 4 percent above two years ago. This is the largest May total since the 7 State series began in 1972. PLACEMENTS of cattle and calves on feed in the 7 States during May totaled 1.63 million, up fractionally over last year but 25 percent below the record high of May 1988. NET PLACEMENTS of 1.48 million for May is 2 percent above last year but 27 percent below 1988. OTHER DISAPPEARANCE totaled 150 thousand head compared to 164 thousand in May 1989 and 146 thousand in May 1988.

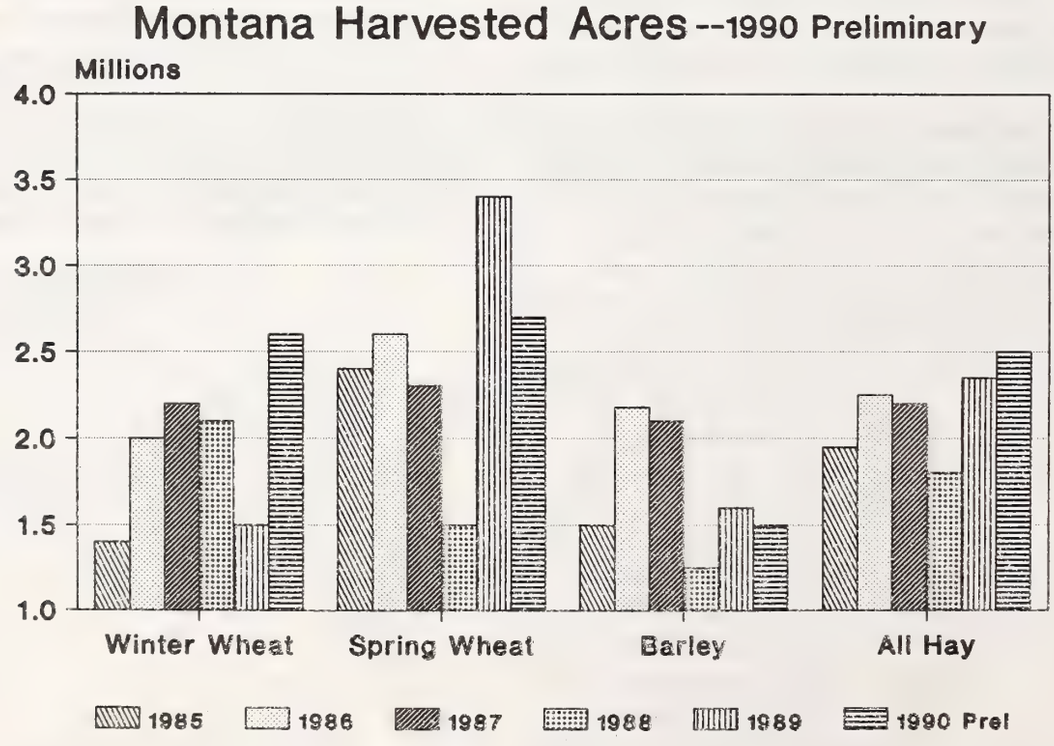
[1] Preliminary. [2] Planted for all purposes. [3] Production forecast available July 12, 1990.



JUNE 1 GRAIN STOCKS

All wheat stored in **Montana** on June 1, 1990 totaled 56 million bushels, up 10 percent from a year ago. June 1 stocks are that amount of wheat left over from the 1989 and earlier years crop production. This year's carryover stocks are 35 percent under the 10-year average, and represent nearly 39 percent of 1989 production. Winter wheat in store, at 24.2 million bushels, was down 11 percent and all spring wheat, at 31.8 million bushels, was up 32 percent. Wheat stored on farms was 79 percent of the total. Barley stocks on June 1 totaled 15 million bushels, up 1 percent from last June. Oats stocks, at 3.2 million bushels, were over twice last year's level. **Nationally**, old crop wheat stocks in all positions June 1, 1990 is placed at 535 million bushels, down 24 percent from last June 1 to the lowest carry-over since 1975. Farm stocks, at 213 million bushels, are down 26 percent from a year ago. Off-farms stocks are 322 million bushels, down 22 percent.

MAY MILK PRODUCTION

Milk production in the 21 major states during May totaled 11.2 billion pounds, 2 percent above production in these same states in May 1989. April revised production, at 10.8 billion pounds, was 1 percent above April 1989. Production per cow in the 21 major states averaged 1,317 pounds for May, 22 pounds more than May 1989. The number of cows on farms in the 21 major states was 8.51 million head, 3 thousand more than April 1990 but 6 thousand head less than May 1989. During the January-March period, the 21 major states produced 31.3 billion pounds of milk, 84.8 percent of the U.S. production. If producers in the remaining 29 states not surveyed monthly followed the same pattern as the 21 states, the U.S. production would be 13.2 billion pounds for May 1990.

MONTANA EGG PRODUCTION

Montana laying flocks produced 45 million eggs in the March through May quarter, down 2 percent from the same quarter last year. Layers for the 1990 quarter averaged 670,000 compared with 710,000 in 1989. The rate of lay in the 1990 quarter was 72.7 eggs per 100 layers compared with 69.8 per 100 layers in the 1989 quarter. The **Nation's** laying flocks produced 17.3 billion eggs during the March through May quarter, up 1 percent from the corresponding quarter a year ago. Production included 14.9 billion for table eggs, 2.16 billion for broiler-type hatching eggs, and 225 million for egg-type hatching eggs. Layers for the quarter averaged 271 million head, up 1 percent from the 268 million head a year ago.

All layers in the **U.S.** on June 1, 1990 totaled 269 million head, compared with 267 million head a year ago. The 269 million layers consisted of 227 million layers producing table or commercial type eggs, 38.8 million layers producing broiler-type hatching eggs and 3.16 million layers producing egg-type hatching eggs. Rate of lay per day on June 1, 1990 averaged 68.9 eggs per 100 layers compared with 68.7 for June 1, 1989. Laying flocks in the 20 major egg production states produced 4.77 billion eggs during may, up 1 percent from the 4.71 billion produced a year ago. The number of layers during May averaged 224 million head, up 1 percent from a year ago.

MAY RED MEAT PRODUCTION

Montana slaughter plants produced 1.3 million pounds of red meat in May 1990. This production is up 23 percent from last month and up 19 percent from May 1989. The number of cattle slaughtered, at 1,700 head, is up 400 head from last year. Average liveweight of cattle slaughtered is 1,086 pounds, up 3 percent from a year ago. Hog slaughter, at 1,900 head, is down 500 head from May 1989. Average liveweight of hogs slaughtered is 234 pounds, down 1 percent from last year.

Commercial red meat production for the **United States** in May 1990 totaled 3.32 billion pounds, down 2 percent from last year. January-May red meat production, at 15.9 billion pounds was down 1 percent from last year. Percentage changes for 1990 accumulated production by individual components were: beef, down fractionally; veal, down 14; pork, down 2; lamb and mutton, up 9. Commercial red meat production includes slaughter in federally inspected and other plants, but excludes animals slaughtered on farms.

APRIL EGG PRODUCTION UP 1 PERCENT

U.S. egg production totaled 5.63 billion during April 1990, up 1 percent from the 5.56 billion produced a year ago. Production included 4.86 billion for table eggs, 698 million for broiler-type hatching eggs, and 73.0 million for egg-type hatching eggs. The total number of layers during April averaged 271 million, up 1 percent from a year ago. April egg production per 100 layers was 2,080 eggs, compared with 2,076 in April 1989.

All layers in the U.S. on May 1, 1990 totaled 269 million, up 1 percent from a year ago. The 269 million layers consisted of 227 million layers producing table or commercial type eggs, 38.8 million layers producing broiler-type hatching eggs, and 3.27 million layers producing egg-type hatching eggs. Rate of lay per day on May 1, 1990 averaged 68.7 eggs per 100 layers, down fractionally from last year's 68.8 eggs per 100 layers.

Laying flocks in the 20 major egg production states produced 4.71 billion eggs during April, up 2 percent from the 4.63 billion produced a year ago. The number of layers during April averaged 226 million, up 1 percent from the 223 million a year ago.

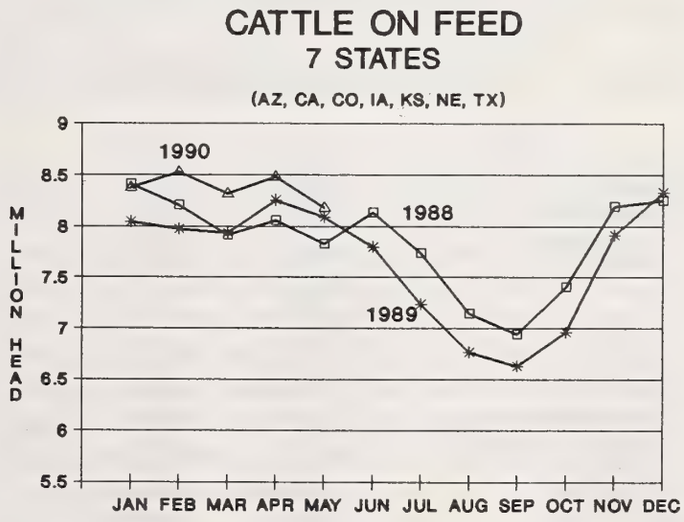
CATTLE ON FEED IN 7 STATES UP 1 PERCENT FROM LAST YEAR

Cattle and calves on feed May 1, 1990, for slaughter market in the 7 States preparing monthly estimates totaled 8.18 million head, up 1 percent from a year ago and 4 percent above May 1, 1988. This is the largest May on feed total in the 7 States since 1974.

MARKETINGS of fed cattle during April totaled 1.55 million, down 2 percent from last year and 3 percent below two years ago.

PLACEMENTS of cattle and calves on feed in the 7 States during April totaled 1.38 million, down 11 percent from last year and 9 percent below April 1988. This is the smallest number placed in April since 1980. NET PLACEMENTS of 1.25 million for April is 12 percent below last year and 9 percent below 1988.

OTHER DISAPPEARANCE totaled 125 thousand head compared to 124 thousand in April 1989 and 139 thousand in April 1988.



PLEASE RETURN

APRIL MILK PRODUCTION UP 1 PERCENT

Milk production in the 21 major States during April totaled 10.8 billion pounds, 1 percent above production in these same states in April 1989. March revised production, at 11.0 billion pounds, was 2 percent above March 1989.

Production per cow in the 21 major States averaged 1,274 pounds for April, 19 pounds above April 1989.

The number of cows on farms in the 21 major States was 8.51 million head, 2 thousand head below March 1990 and 16 thousand head below April 1989.

During the January-March period, the 21 major States produced 31.3 billion pounds of milk, 84.8 percent of the U.S. production. If producers in the remaining 29 States not surveyed monthly followed the same pattern as the 21 States, the U.S. production would be 12.8 billion pounds for April 1990.

APRIL RED MEAT PRODUCTION

Montana slaughter plants produced 1.1 million pounds of red meat in April 1990. This is down 11 percent from last month and is down 2 percent from April 1989.

The number of cattle slaughtered, at 1,200 head, is down 100 head from last year. Average live weight of cattle slaughtered, at 1,118 pounds, was up 14 percent from a year ago. Hog slaughter, at 1,700 head, is down 600 head from April 1989. Average live weight was 237 pounds, up 1 pound from last year.

Commercial red meat production for the **United States** in April 1990 totaled 3.05 billion pounds, down 3 percent from last year. January-April red meat production, at 12.6 billion pounds, was down 1 percent from last year. Percentage changes for 1990 accumulated production by individual components were: beef, down fractionally; veal, down 14; pork, down 1; lamb and mutton, up 9. Commercial red meat production includes slaughter in federally inspected and other plants, but excludes animals slaughtered on farms.

FARM WAGES AVERAGED $5.54 FOR APRIL

A total of 2.96 million persons worked on the nation's farms and ranches during the week of April 8-14, 1990. The work force was comprised of 1.50 million self-employed farm operators, 427,000 unpaid workers, and 833,000 workers hired directly by farm operators. Rounding out the total were 203,000 agricultural service employees doing work on farms and ranches during the survey week.

The all hired farm worker wage rate for the April 1990 survey week averaged $5.54 per hour, up 19 cents from a year earlier. Workers paid on an hourly basis earned $5.23 per hour compared with $5.06 last April. Wage rates for field and livestock workers were $5.20 And $4.94, respectively. During April 1989, field workers made $5.14 while livestock workers averaged $4.71 per hour.

During the current survey week, self-employed persons worked an average of 35.8 hours, 3.8 fewer hours than in the comparable week in 1989. Unpaid workers, who worked 15 hours or more during the week, put in 33.0 hours compared with 34.1 hours a year earlier. Hired workers spent an average of 39.8 hours doing agricultural work, down 0.4 hour from April of last year.

Benefits, such as housing and meals, were provided to 44 percent of the hired workers during the survey week. Last year 47 percent of the work force received benefits in addition to cash wages. This year, 7 percent of the workers received both housing and meals, and another 15 percent received housing but no meals.

MODELING THE U.S. POTATO INDUSTRY

The U.S. potato industry has changed over the past 35 years:

- consumers increased demand for convenience foods;
- production shifted to the Western states; and
- processors developed freezing technology.

The potato industry is a significant producer of revenue for U.S. agriculture. But its contributions vary year to year by hundreds of millions of dollars.

While the number of acres used to produce potatoes increased only slightly during the last 35 years, the number of farms has decreased dramatically from almost 1-1/2 million in 1954 to less than 15,000 in 1987. Going into the 1990's, farmers harvest an average of nearly 90 acres per farm versus less than 1 acre per farm in the early 1950's.

POTATO GROWING SHIFTING TO THE WEST

Another structural change in the potato industry is the regional shift in share of production. The shift from East to West can be explained in part by the West's advantage in yield because of better growing conditions. Another factor behind the regional shift is the expansion of potato processing. The West's climate is more consistent and suitable for processing varieties such as Russet Burbank.

MANY ARE COLD, MORE ARE FROZEN

Changes in storage technology and marketing followed the introduction of frozen potatoes. First introduced in 1945, the freezing process was done on 8% of the potatoes consumed in 1961, rising rapidly to 37% in 1988.

Annual per capita use increased from about 110 pounds in the mid-1950's to about 120 pounds in the 1980's.

Although farm prices have increased over the years, prices in constant dollar terms declined. The average value per hundredweight for U.S. growers rose from $1.98 in the mid-1950's to $4.83 in the mid-1980's.

Generally, retail prices of fresh and frozen potatoes haven't followed the same annual trend. In 1960, the ratio of frozen to fresh potato retail prices was about 5 to 1; by the mid-1980's, it was 2.8 to 1.

Put it all together and the U.S. potato industry changed in response to changes in demand and supply. The increased demand for convenience foods was met by supplying new products--mainly frozen potatoes. The industry also pursued lower costs by shifting production to the Western states and increasing acreage per farm and yields.

WHAT'S AHEAD?

Will 1990-91 make 3 favorable years in a row for potato growers? One of the most important variables is planted acres. A few factors indicating an increase in 1990 area planted include:

- back-to-back years of very strong potato prices--an unusual occurrence in the up-and-down potato industry;
- lower expected prices for commodities such as wheat, corn, and feed barley--which compete with potatoes for prime land;
- favorable processing contract prices in most states; and
- continued strong domestic and export demand for processed products.

Potato acreage should increase this year. Tempering that, however, could be:

- concern of potato growers and potato grower organizations about the potential effects of acreage increases on grower incomes;
- availability--and high cost--of seed potatoes caused by strong processor demand for all potatoes, including culls that would normally go for seed;
- crop rotation patterns which may not favor potato acreage this year; and
- attractive prices for dry edible beans, alfalfa hay, and possibly sugar beets.

When all of these factors are combined, it appears that if enough seed is available, U.S. planted acreages could rise 2-5% in 1990, resulting in harvested area of about 1.3 million acres. Assuming average weather and yields somewhat below trend (due to continued dryness in the Red River Valley of North Dakota), production for 1990/91 could total between 385-395 million hundredweight. If the Valley receives significant rainfall this spring and normal moisture during the season, output would probably go into the higher end of the range.

(Information for this article was taken from the Vegetables and Specialties Situation and Outlook Report, March 1990.)

POTATO STOCKS

Potato stocks on hand May 1, in **Montana** totaled 100,000 cwt, 35,000 more than a year ago, but only 4 percent of total production. For the **Nation**, May 1, 1990 potato stocks are set at 50.1 million cwt, down 16 percent from last year and the lowest May level since 1981. Stocks account for 16 percent of fall production this year compared with 19 percent last year. Seasonal disappearance totaled 266 million cwt to May 1, up 8 percent from last year.

The **Six Western States**, at 39.6 million cwt, hold the bulk of U.S. potatoes this May 1, but stocks are down 19 percent from last year and 28 percent below two years ago. Idaho stocks are off 19 percent from last year. Washington holdings are down one-third, while Oregon stocks are 9 percent below last May. California is down more than 40 percent. Colorado (with a 2 percent gain) and Montana are the only two Western States with more spuds than last year.

EGG RECEIPTS INCREASE

Sharply higher egg prices pushed the value of **Montana** eggs produced in 1989 up 45 percent from 1988. Value of production at $11.3 million was realized from 180 million eggs produced. Egg production was 7 percent below the previous year. The 1989 average price per dozen was 75 cents compared with 48 cents in 1988.

The **U.S.** combined value of production from broilers, eggs, and turkeys and the value of sales from chicken in 1989, was $15.0 billion, up 20 percent from the $12.5 billion in 1988. Of the combined total, 58 percent was from broilers, 26 percent from eggs, 15 percent from turkeys, and 1 percent from other chickens.

The value of sales from chickens (excluding broilers) in 1989 was $140 million, up 47 percent from the $95.3 million a year ago. Prices averaged 14.9 cents per pound live weight compared with 9.2 cents in 1988. Value of egg production in 1989 was $3.85 billion, up 26 percent from the $3.07 billion in 1988. The 4 percent decrease in production was more than offset by a higher price per dozen. In 1989 eggs averaged 68.9 cents per dozen, compared with 52.8 cents in 1988.

MONTANA WINTER WHEAT HARVEST EXPECTATIONS UP 73 PERCENT

Montana's wheat growers expect to harvest 96 percent of the winter wheat planted last fall. Based on May 1 conditions, 2.6 million acres remain for harvest, up 73 percent from last year, when 1.0 million acres were abandoned.

Montana's winter wheat production is forecast at 88.4 million bushels, up 64 percent from last year and the largest crop since 1981. This year's winter wheat projected yield, at 34 bushels per acre, is down 6 percent from last year.

Moisture is adequate in the major growing areas of the state, but the eastern part of Montana has serious moisture reserve problems. If dryness persists in that area a significant reduction in winter wheat production will occur.

For the Nation, winter wheat production is forecast at 2.09 billion bushels as of May 1, 1990. This is up 44 percent from the 1.45 billion bushels produced in 1989 and, if realized, will be the highest production level since the record crop of 1981. Area for grain, at 50.8 million acres, is up 23 percent from last season's drought and winter kill reduced level. Yield prospects are forecast at 41.1 bushels per acre, up 6.0 bushels from last year. This would be the second highest average on record. May 1 conditions point to higher yields than last season in most states. Harvested acreage levels are greater than 1989 in most states. Harvested area and yields are up strongly in the major hard red winter states.

MILK PRODUCTION, DISPOSITION, AND INCOME--1989

Montana's 1989 milk production at 332 million pounds is down 20 million pounds from last yer. The rate per cow, at 13,833, declined 2 percent from 1988. The average number of milk cows stood at 24,000, down 1,000 head from last year.

Cash receipts from milk marketings during 1989 totaled $43.3 million, compared with $41.3 last year. Producer returns averaged $13.61 per hundredweight, up $1.33 from 1988 returns. Returns were $3.83 per pound of milkfat in 1989 and $3.51 per pound in 1988.

U.S. milk production declined 1 percent in 1989 to 144 billion pounds. The rate per cow, at 14,244, was 99 pounds above 1988. The annual average number of cows at 10.1 million head was 1 percent less than the average in 1988.

Cash receipts from marketings of milk during 1989 at $19.4 billion, was 10 percent above 1988. Producer returns averaged $13.65 per hundredweight, $1.31 above the 1988 average. Marketings totaled 142 billion pounds 1 percent below 1988. Marketings include whole milk and producer-separated cream sold to plants and dealers as well as milk sold directly to consumers.

An estimated 2.10 billion pounds of milk were used on farms where produced, 6 percent below 1988. Calves were fed 72 percent of this milk with the remainder consumed in producer households as milk, cream, and butter.
